IN THE CIRCUIT COURT OF COOK COUNTY
COUNTY DEPARTMENT, CHANCERY DIVISION

PRESTIGE FEED PRODUCTS, LLC

Plaintiff/Counterclaim Defendant,

v.

VILLAGE OF MOUNT PROSPECT,

Defendant/Counterclaim Plaintiff.

Case No. 2023 CH 5147
(transferred to Law Div’n)

Hon. Thomas More Donnelly

Cal. W

VILLAGE OF MOUNT PROSPECT’S RESPONSE TO PRESTIGE’S
COMBINED MOTION FOR JUDGMENT ON THE PLEADINGS AND
PARTIAL MOTION FOR SUMMARY JUDGMENT

The Village of Mt. Prospect’s (“**Village**”) Counterclaim alleges that a noxious odor emitted from Counterclaim Defendant Prestige Food Products, LLC’s (“**Prestige**”) manufacturing facility carries beyond the facility and its lot lines, and “taints the air and renders it unwholesome or unreasonably disagreeable to other persons.” As result of the odor, Prestige is in violation of (1) its business license limiting it to a Light Manufacturing Use and Village Code §14.2401 (Count 1) and (2) Village Code §14.2104 which prohibits, among other things, released odorous matter across lot lines that are (i) a nuisance; and (ii) a source of discomfort to neighboring uses (Count 2). Additionally, these same noxious odors are common law public nuisance (Count 3). Because these violations are repeated and on-going, the Village seeks a permanent injunction barring Prestige’s Village Code-violating and public nuisance-causing conduct.

By its current motion, Prestige seeks a judgment on the pleadings and via summary judgment. On the pleadings, Prestige contends that each count of the Village’s counterclaim fails to allege facts that demonstrate Prestige violated Village Ordinances because there are no allegations that Prestige is releasing odors detectable in the ambient air after it is diluted with 24

volumes of odor free air as measured by a Scentometer (the “**Supposed Scentometer Standard**”).

On summary judgment, Prestige claims as a matter of undisputed fact that: 1) the Village has no evidence that Prestige released offensive odors over its lot lines; 2) a permanent injunction barring Prestige from continuing violations of Village Ordinances impermissibly alters the *status quo* between the parties; and 3) the Village failed to allege either an irreparable injury or an inadequate remedy at law arising from Prestige’s conduct.

This Court, as detailed more fully below, should deny Prestige’s motions because:

- The Counterclaim sets forth detailed factual allegations setting forth breaches of its ordinances upon which this Court can grant relief.
- The Village’s claims do not require it to prove the Supposed Scentometer Standard.
- The Village has detailed scientific evidence (including odor readings in excess of Prestige’s inapplicable Supposed Scentometer Standard), internal monitoring of Prestige’s odors, and anecdotal evidence on effects on community members which will permit a reasonable finder of fact to determine that Prestige’s operations are causing odors that taint the air and render it unwholesome or unreasonably disagreeable and creates a source of discomfort to the neighboring community.
- The Village exercising its police powers to protect the health, safety, and welfare of the community is not required to meet the typical equitable requirements of an injunction but need only demonstrate a violation of its ordinances to justify injunctive relief. In any event, the Village can meet its burden in that, in the absence of an injunction, the Village will remain subject to an on-going violation of its ordinances prohibiting the release of noxious odors across lot lines which in itself is an irreparable injury for which there is no adequate remedy at law. Notably, permanent injunctions by their very nature are intended to upset the status quo when necessary – the concept of ‘preserving the *status quo*’ is limited to preliminary injunctions to ensure that the Court will have the ability to enter effective relief on a permanent injunction.

A. The Allegations of the Third Amended Counterclaim

The Village is an Illinois home rule municipality located in Cook County, Illinois. (Counterclaim (“Ccl,”) ¶ 1) Prestige is in the business of drying soy and milk-based cheese and then selling it as an additive to livestock feed. (Ccl, ¶ 2) Prestige desired to operate from a building within the Kensington Business Park area of the Village with a common address of 431 Lakeview Court, Suite A, Mount Prospect, Illinois (the “**Facility**”). (Ccl, ¶ 13) Because, in part, the Facility is bordered by a single-family residential area approximately 150 feet to its South, the Village zoned the Facility as an I-1 zoning district which is a “**Limited Industrial District.**” (Ccl, ¶ 14) All remaining zoning districts bordering the Facility are Limited Industrial Districts. (Ccl, ¶ 15)

1. Prestige misrepresents that it will operate as a Light Manufacturing use.

Per Village Code, the Village allows manufacturing in a Limited Industrial District, but only under a “Manufacturing, Light” use, instead of a “Manufacturing, Heavy” use. (Ccl, ¶ 16) The difference between the two uses is whether a manufacturing facility can operate in a self-contained manner where odors stay “in house” by not leaving the facility or crossing lot lines. (Ccl, ¶ 17)

Light Manufacturing is a manufacturing process where the impacts are self-contained within the manufacturing facility:

The assembly, fabrication or processing of goods and materials using processes that do not create noise, smoke, fumes, odors, glare or health or safety hazards outside of the building or lot where such assembly, fabrication, or processing takes place, where such processes are housed entirely within a building.

Village Code § 14.2401. (Ccl, ¶ 18) Heavy Manufacturing, in contrast, is defined as those uses beyond Light Manufacturing where the impacts leave the manufacturing facility and cross lot lines.

FILED DATE: 11/27/2024 12:39 PM 2023CH05147

(“The assembly, fabrication or processing of goods and materials ... that otherwise do not constitute ‘light manufacturing’”). Village Code § 14.2401. (Ccl, ¶ 19)

Therefore, the Village Zoning Code’s definitions of “Light Manufacturing” and “Heavy Manufacturing” provide that if Prestige’s operations result in odor emissions that were not self-contained and extended beyond the Facility or its property line, then such operations are not a permitted use. (Ccl, ¶ 20)

Prestige applied to the Village for a Certificate of Occupancy and a business license (“**License Application**”) to operate from the Facility as a Light Manufacturing use. (Ccl, ¶ 21) Prestige would not be able to operate from the Facility if the Village denied either the Certificate of Occupancy or business license. (Ccl, ¶ 22) Prestige knew that its operation from the Facility would be a Heavy Manufacturing use (*i.e.*, odor emissions that would extend beyond the Facility its lot line) and, in both applications, materially misrepresented or omitted (despite a duty to disclose), key information to the Village to obtain approval to operate as a Light Manufacturing use. (Ccl, ¶ 23)

There was a lot at stake for Prestige: the process of securing a special use permit to allow for Heavy Manufacturing operations at the Facility would require public hearings, increased disclosures of Prestige’s processes, approval by the Village Board of Trustees, and likely opposition from the public. (Ccl, ¶ 24) In addition to being time-consuming and costly, the result may be a denial of a special use permit and the inability of Prestige to operate from the Facility. (Ccl, ¶ 25) While, in contrast, a Light Manufacturing use approval would allow Prestige to move in, set up, operate, and deal with any misclassifications if they arose. (Ccl, ¶ 26)

Prestige chose to “beg forgiveness” rather than “seek permission” by applying under a Light Manufacturing use when it knew it would operate as a Heavy Manufacturing use. (Ccl, ¶ 27)

Regarding the Certificate of Occupancy, “Nicholas & Associates” submitted the building permit application on behalf of Prestige. (Ccl, ¶ 28) On the application, Prestige described construction of the following benign improvements: “Re-portion tenant demising walls within building, addition of interior bathrooms, overhead doors, and two (2) recessed loading docks. Scope raising a portion of the rear roof to accommodate a future tenant.” (Ex. A) (Ccl, ¶ 29)

The application included plans for work on the roof of the building but did not include plans for the erection of industrial stacks on the east end of the roof, just north of and a mere 600 feet away from an established zoned residential district. (Ccl, ¶ 30) Industrial stacks are indicators of Heavy Manufacturing use because they suggest that the operations will produce smoke, fumes, or odors which will not be contained within the facility or the lot lines. (Ccl, ¶ 31) Prestige knew that its disclosure of its intent to install industrial stacks on its Certificate of Occupancy application would cause greater scrutiny from the Village of its proposed Light Manufacturing use. (Ccl, ¶ 32) Prestige intentionally omitted the disclosure from its application to avoid such scrutiny and the risk that its application would be denied. (Ccl, ¶ 33)

The Village relied on Prestige’s omission when granting the Certificate of Occupancy. (Ccl, ¶ 34) Regarding the License Application, Prestige applied for approval to operate from the Facility as a Light Manufacturing use. (Ccl, ¶ 35) The License Application required Prestige to provide a “Detailed Description of All Business Uses/Services provided.” (Ccl, ¶ 36, Ex. B) Prestige used an intentionally generic description to deemphasize the odor causing effects of its operational process:

We will be processing cheese for animal feed in the facility. The cheese will be dried into powder form and then sold as a raw ingredient into swine feeds. This product will be solely for animal feed use.

(Ccl, ¶ 37, Ex. C) For example, Prestige did not mention that it processed after-market, typically moldy and acrid cheese to place in its feed products and that it would not refrigerate the after-market cheese it procured in the Facility. (Ccl, ¶ 38)

Prestige certified on the License Application that it understood that any misleading information would be cause for the refusal to grant or for the revocation of any license granted pursuant to the Application. (Ccl, ¶ 39, Ex. B) Prestige further certified on the License Application that by applying in writing for a license to operate in the Village it “read and underst[ood] [its] obligations under appropriate Village ordinances.” (Ccl, ¶ 40, Ex. B)

The Village would have denied Prestige a business license if Prestige disclosed on the License Application that its animal feed processing would emit odors that carried beyond the Facility and the lot lines of the Location during operations in violation of a Light Manufacturing permitted use. (Ccl, ¶ 41)

2. Prestige begins Operating the Facility to almost immediate complaints and Prestige’s acknowledgment and promise to fix the issue.

Almost immediately, the Village received complaints from residents that Prestige’s operation from the Facility created odors which penetrated their property, were sources of discomfort to the public, a nuisance, and significantly impacted the residents and businesses use and enjoyment of their property. (Ccl, ¶ 42) Village staff corroborated the complaints through, among other things, Village staff inspections. (Ccl, ¶ 43)

On June 12, 2019, the Village Manager sent a Notice of Violation and Imminent Legal Action (“**June 12, 2019 Notice**”) to Prestige. (Ccl, ¶ 44, Ex. C) In the June 12, 2019 Notice, the Village told Prestige it operated the Facility as a Heavy Manufacturing use in violation of Village zoning for the Facility. (Ccl, ¶ 45, Ex. C) Moreover, the Village informed Prestige that regardless

of the misclassification of manufacturing use, Prestige's operation of the Facility independently violated separate provisions of the Village Code. (Ccl, ¶ 46, Ex. C)

Regarding unacceptable odors, Section 14.2104(G)(6) of the Village Code (emphasis added) provides:

The release of odorous matter from **any** industrial district across residence or business district boundary lines shall be so controlled that, at ground level or at habitable elevations, the concentration shall not exceed the odor threshold level. **Further, the release of odorous matter across lot lines shall not become [1] a nuisance or [2] source of discomfort to neighboring uses.**

An odor related "nuisance," as defined by the Village Code, is a subjective standard:

[t]o use any premises to create an offensive smell which taints the air and renders it unwholesome or unreasonably disagreeable to other persons.

§ 14.2104(G)(1). (Ccl, ¶ 48)

Both Section 14.2104(G)(6) and Section 14.2104(G)(1) establish a standard for when Prestige's odor emissions become a nuisance in violation of the Code: if the odor emissions from the Facility cross the Prestige property lot line and *either* create an offensive smell which taints the air and renders it unwholesome or unreasonably disagreeable to other persons, *or* become a source of discomfort to neighboring uses. (Ccl, ¶ 49)

Prestige acknowledged that its operation violated Village Code and, in an August 28, 2019 letter to the Village, asked the Village for time to install a self-selected odor reduction system that Prestige claimed to believe "will sufficiently reduce odors to comply with Village Code Requirements." (Ccl, ¶ 50, Ex. D) Further, Prestige promised to run its processing operations at night until its odor reduction system was fully implemented and "we have this odor issue 100% behind us." (Ccl, ¶ 51, Ex. E) Notably, if Prestige properly disclosed the odor issues on its initial

application, Prestige and the Village would have engaged in a much more collaborative process in selecting the means and methods of the mitigation efforts. (Ccl, ¶ 52)

3. *Prestige independently undertakes odor mitigation efforts and still cannot come into compliance with Village Code.*

Even when Prestige pledged to come into conformance with Village Code, Prestige independently dictated what mitigation it was going to perform, many times without the knowledge, review, or consent of the Village. (Ccl, ¶ 53) After Prestige installed its self-selected odor reduction system, Prestige reopened its processing operations at the Facility. (Ccl, ¶ 54) However, the odor reduction system did not bring Prestige within compliance of the Village Code. (Ccl, ¶ 55) The Village continued receiving complaints about odor emitted from the Facility from residents in the nearby residential neighborhood and from neighboring businesses and the Village revoked Prestige's permitted use permit in March 2020. (Ccl, ¶ 56)

Prestige acknowledged its operations from the Facility were still creating issues and proposed yet another self-selected enhancement to its odor reduction system. (Ccl, ¶ 57) In October 2020, the Village and Prestige met at the Facility to review Prestige's changes to odor reduction system. (Ccl, ¶ 58) The Village believing that Prestige took enough steps to attempt to comply with Village Code, allowed Prestige to resume regular operations on a trial basis under a temporary use permit expiring in mid-April 2021. (Ccl, ¶ 59)

However, Prestige's resumption of regular operations caused numerous and regular complaints from nearby residential and business communities of odors which penetrated their property, were sources of discomfort, a nuisance, and significantly impacted their use and enjoyment of their property. (Ccl, ¶ 60) Village staff corroborated the complaints and agreed Prestige's operation of the Facility caused odors that would disrupt the enjoyment of property in

adjacent neighborhoods as well as the operation of adjacent business uses. (Ccl, ¶ 61)

On March 1, 2021, the Village sent a notice to Prestige of its non-conforming use and that it would revoke Prestige's temporary use permit unless Prestige actually and effectively resolved the odor problem or until Prestige was issued a conditional use permit by the Village Board. (Ccl, ¶ 62, Ex. F)

4. The Parties enter into a Tolling Agreement to give Prestige time to comply with Village Code.

The Village remained committed to giving Prestige the opportunity to come into compliance. (Ccl, ¶ 63) In that context, the Village entered into a Tolling Agreement with Prestige which, among other things, limited the Prestige's operation of the Facility to late night and early morning hours. Exhibit G is the Tolling Agreement. (Ccl, ¶ 64) Prior similar operating limitations reduced the complaint volume and effect of Prestige's non-conforming operation on the neighboring communities. (Ccl, ¶ 65) The Village and Prestige amended and restated the Tolling Agreement on numerous occasions so that the Tolling Agreement ran from March 1, 2021, until the Village terminated the Tolling Agreement effective May 11, 2023. (Ccl, ¶ 66) Each extension reflected the parties' mutual recognition that Prestige had not solved the problem. (Ccl, ¶ 67)

The Village hoped the limited operating hours would spur Prestige to make meaningful progress in its mitigation efforts so that it could come into compliance with the Village Code. (Ccl, ¶ 68) Instead, Prestige changed tactics and became even more opaque about their mitigation efforts and engaged in cherry-picked testing to rubber-stamp its selected ineffective remedies. (Ccl, ¶ 69)

Prestige hired a third party, Mostardi Platt, in April of 2021 to design and perform an odor investigation at the Facility. (Ccl, ¶ 70) Mostardi Platt performed tests at an isolated moment in time on the Supposed Scentometer Standard, a separate standard than those set forth in the Village

Code. (Ccl, ¶ 71) Prestige via Mostardi Platt, its paid agent, entirely dictated the testing conditions (the operational capacity, wind, locations of testing equipment, temperature) with no input from the Village. (Ccl, ¶ 72) While Prestige claims Mostardi Platt's testing proved that its operation did not cause non-compliance with the Village Code, Prestige's actions belied this contention. (Ccl, ¶ 73)

Despite claiming compliance, Prestige subsequently invested in what Prestige termed "additional significant upgrades" to its self-selected odor control system at significant additional cost. (Ccl, ¶ 74) Prestige's act of fundamentally altering their system rendered its prior Mostardi Platt testing meaningless because it changed the system that Mostardi Platt assessed. (Ccl, ¶ 75) Prestige performed this work without soliciting any input or approval from the Village, or without applying for permits and requesting inspections of any structural work it performed. (Ccl, ¶ 76) Prestige would not have made these changes if it believed its prior system brought it into compliance with Village Code. (Ccl, ¶ 77) After Prestige made these changes, Prestige again independently decided to engage Mostardi Platt for a second round of testing under the same non-Village Code standard and under conditions completely dictated by Prestige. (Ccl, ¶ 78)

The Village grew increasingly frustrated with Prestige's failure to remedy the issue and its opaque efforts at self-mitigation and self-selected testing criteria. (Ccl, ¶ 79) The Village began doubting that Prestige was acting in good faith and instead, the Village believed that Prestige was simply employing a series of half measures without engaging in a collaborative process that would fundamentally address the issues. (Ccl, ¶ 80) Prestige believed that engaging in that collaborative process would likely result in odor mitigation processes that would be cost-prohibitive to Prestige and, therefore, avoided it. (Ccl, ¶ 81)

For example, despite Prestige's claimed changes and even with Prestige operating the

Facility at reduced operating hours, the Village received consistent complaints from neighboring businesses and residents that Prestige's operation from the Facility created odors which penetrated their property, were sources of discomfort, a nuisance, and significantly impacted their use and enjoyment of their property. (Ccl, ¶ 82)

5. The Village terminates the Tolling Agreement and Prestige initiates this lawsuit.

Ultimately, the Village believed that Prestige had no intention of bringing itself into compliance with the Village Code and terminated the Tolling Agreement. (Ccl, ¶ 83) It was Prestige, not the Village, which ran into Court in this matter to seek a declaratory judgment that its operation of the Facility complied with Village Code on May 25, 2023. (Ccl, ¶ 84) Prestige did agree, however, to continue operating at limited hours. (Ccl, ¶ 85)

Despite Prestige's claims of compliance, Mount Prospect Police Department ("MPPD") officers reported noxious odors when patrolling the area beyond the Facility and beyond the lot lines during late night and early morning hours. (Ccl, ¶ 86) The MPPD received, investigated, and documented numerous complaints from residents about noxious odors during Facility operations from October 21, 2023 through December 1, 2023. (Ccl, ¶ 87, Ex. H)

Again, belying Prestige's contention that the first and second Mostardi Platt testing it performed means it is *per se* in compliance with Village Code, Prestige engaged in *more* self-selected odor mitigation efforts. (Ccl, ¶ 89) Specifically, on December 9, 2023, after the documented observations above, facing a temporary restraining order, and after this Court denied Prestige's Motion To Dismiss Defendants' Verified Counterclaim For Injunctive Relief, Prestige claims it installed a "Tri-Stack Strobic Air Fan" at significant cost to further mitigate the issue. (Ccl, ¶ 90) Continuing a familiar pattern, Prestige performed this work without soliciting any input

or approval from the Village, or without applying for permits and requesting inspections for any structural work it performed. (Ccl, ¶ 91) This work included installing significant exterior ductwork to the exterior of the Facility. (Ccl, ¶ 92) Prestige's act of fundamentally altering their system rendered its prior Mostardi Platt testing meaningless because it changed the system that Mostardi Platt tested. (Ccl, ¶ 93)

6. *Prestige, after its latest "fix", resumes operation, and, like prior "fixes", still fails to comply with Village Code.*

Like some prior attempted fixes performed by Prestige, the Village believed that these attempted fixes could possibly bring Prestige into compliance with Village Code. (Ccl, ¶ 94) However, just because in an isolated instance, under isolated conditions, Prestige may temporarily comply with Village Code related to odors, does not mean Prestige's regular operation would comply with Village Code. (Ccl, ¶ 95) The parties agreed Prestige could operate without restriction to test whether Prestige's newest attempted fix could comply with Village Code. (Ccl, ¶ 96)

The answer is "no", and, since Prestige resumed full operations, the Village receives an unending series of increased complaints and notices about noxious odors being released by the Facility. (Ccl, ¶ 97) The complaints have come from residents in nearby neighborhoods and from business owners, including a school located near the Facility. (Ccl, ¶ 98)

To give an idea of the escalation of the complaints, since Prestige began operations in 2019, the Village received approximately 600 complaints from residents and businesses in the vicinity of the Facility about the emission of noxious odors. *More than half* of those complaints occurred since December 2023. (Ccl, ¶ 99) Now that Prestige operates during normal business hours, its operation causes greater impacts on local schools and businesses. (Ccl, ¶ 100)

For example, the Village received complaints from personnel at the Park View Montessori

School about the Facility's odors adversely affecting their students. (Ccl, ¶ 101) The Park View Montessori School is approximately .2 miles from the Facility. (Ccl, ¶ 102) The Park View Montessori School is primarily a private pre-school, offering a curriculum from students starting at 6 months and going through 6 years old. (Ccl, ¶ 103) The Assistant Director of the Park View Montessori School, Irena Nikolic, reported to the Village that during a three-day period in February 2024, the burnt cheese smell coming from the Facility caused problems for students at the school. (Ccl, ¶ 104, Ex. I at ¶ 3)

During that time period, children attending the Park View Montessori School had to leave a nearby park where they were playing and return indoors due to the burnt cheese smell, several children complained they felt ill after being outside and smelling the odors emitted by the Facility, and several parents with students enrolled at Park View Montessori School expressed to Nikolic their concern about the odor coming from the Facility and the adverse effect it has on their children when they are at the school. (Ccl, ¶ 105-107, Ex. I at ¶ 4-7) Nikolic believes the odor emitted from the Facility poses a threat to the health of students who attend the school, particularly children with asthma and other breathing conditions. (Ccl, ¶ 108, Ex. I at ¶ 8) Jennifer Stanley, a teacher at the Park View Montessori, corroborated Nikolic's observations, stating that on February 8, 2024 one of the children Stanley teaches was so affected by the burnt cheese smell that when she came back inside the school, she felt ill and thought she was going to vomit and refused to eat lunch because she was nauseous from the odor emitted by the Facility. (Ccl, ¶ 109-110, Ex. J at ¶ 4-5)

Later that month, Stanley again contacted the Village to complain about the odor coming from the Facility. (Ccl, ¶ 111, Ex. J at ¶ 6) The odor required Stanley to bring one of her students indoors from playing outside because the student experienced nausea, the children on the playground started coughing, the smell from the Facility is so overpowering that Stanley must

cover her nose when she supervises students on the playground, and, at times, Stanley has been forced to cut the mandatory outdoor play time for her children set by the Department of Children and Family Services. (Ccl, ¶ 111-115, Ex. J at ¶ 6, 10-12) Stanley believes the smell emitted by the Facility poses a threat to the health of her students. (Ccl, ¶ 116, Ex. J at ¶ 13)

This is not the only case of school children getting sick from odors emanating from the facility: this time at public school. (Ccl, ¶ 117) On March 14, 2024, the Village received a complaint about a burnt cheese odor from Max Inzerillo, a Mount Prospect resident living at 1513 Mitchell Lane, approximately a mile from the Facility. (Ccl, ¶ 118, Ex. K at ¶ 1) On March 14, 2024, Inzerillo was outside with his children waiting for the bus to pick them up to take them to school. (Ccl, ¶ 119, Ex. K at ¶ 2) While standing outside, Inzerillo detected an odor he recognized as a burnt cheese smell that comes from the Facility. Inzerillo had detected the burnt cheese smell on previous occasions. (Ccl, ¶ 120, Ex. K at ¶ 3-4) While waiting for the school bus, the burnt cheese smell was so bad that Inzerillo's daughter, who was outside with him, started to vomit. (Ccl, ¶ 121, Ex. K at ¶ 5)

Mizkan America, Inc. ("**Mizkan**") is a corporation that occupies building space located at 1601 Feehanville Drive in Mount Prospect. (Ccl, ¶ 123, Ex. L at ¶ 1) Michael Sobotta is the Mizkan plant manager. (Ccl, ¶ 124, Ex. L at ¶ 1) Mizkan is located approximately .2 miles from Prestige. (Ccl, ¶ 125, Ex. L at ¶ 2) Sobotta complained to the Village on January 4, 10, 11 and February 7, 26, and 24 about noxious odors emitted by the Facility (after Prestige installed the new odor mitigation equipment in December 2023). (Ccl, ¶ 126, Ex. L at ¶ 4-10)

The burnt cheese smell emitted by the Facility interferes with work conducted at Mizkan by infiltrating the Mizkan HVAC system and getting into the Mizkan facility. (Ccl, ¶ 134, Ex. L at ¶ 11-12)) Mizkan conducts work related to the taste and smell of food products and when the

Prestige burnt cheese smell gets into the Mizkan facility, it becomes very difficult, even impossible, to conduct the food products testing that constitutes an important part of Mizkan's work. Ccl, ¶ 135, Ex. L ¶¶ 3, 13)

The Village has a duty and an obligation to protect its residents from Prestige operation in violation of a zoned Light Manufacturing use by expelling odors beyond its facility and lot lines. (Ccl, ¶ 142) The Village has a duty and an obligation to protect its residents and businesses from the conduct of Prestige that subjects them to noxious odors that unreasonably interfere with both their use and enjoyment of their property and denies them their right to a healthy and safe environment. (Ccl, ¶ 143)

The Village will suffer irreparable harm if it cannot enforce its Code provisions and protects its citizens from the harm caused to them by Prestige's actions in operating the Facility in such fashion that they are denied both the use and enjoyment of their property and their right to a healthy and safe environment. (Ccl, ¶ 144) Due to the irreparable harm to the Village and neighboring residents, including young school children, and businesses caused by Prestige's operation of the Facility, the Village has no adequate remedy at law. (Ccl, ¶ 145)

B. The Village's Claims for Relief

The Village has three causes of action: Count 1 – Violation of the Village Zoning Code § 14.604; Count 2 – Violation of Village Code Section 14.2104(G)(6); Count 3 – Common Law Public Nuisance.

- 1. Count 1 States a Claim Against Prestige for a Continuing Improper and Unauthorized Use of its Business Facility – the Release of Odors Outside Prestige's Lot Lines – in Violation of Village Zoning Code § 14.604.*

Regarding Count 1, Prestige, through the noxious odors emitted during operations at its

Facility, violates § 14.604 of the Village Code, related to an I-1 Limited Industrial District that allows for Light Manufacturing as a permitted use. (Ccl, ¶ 147) The Village Code defines Light Manufacturing as:

The assembly, fabrication or processing of goods and materials using processes that do not create noise, smoke, fumes, odors, glare or health or safety hazards outside of the building or lot where such assembly, fabrication, or processing takes place, where such processes are housed entirely within a building.

Village Code § 14.2401.

The Village's detailed allegations of the Facility's odors effect on schoolchildren, school operations, neighboring businesses, and local residents demonstrates that Prestige's operation of Facility is far from "self-contained," creating odors that go beyond the Facility and lot lines. (Ccl, ¶ 149) The odor penetration does more than just cross lot lines, it causes adverse health impacts on residents, including young students, and business employees, and adversely effects business operations of neighboring businesses. (Ccl, ¶ 150) Accordingly, the odor penetration significantly impacts the use and enjoyment of adjacent properties. (Ccl, ¶ 151) These allegations also permit a factfinder to conclude that Prestige creates an offensive smell that taints the air and renders it unwholesome or unreasonably disagreeable to other persons or is a source of discomfort to neighboring uses.

Because Prestige's use of its facility fails to comply with the requirements of a Light Manufacturing use, This Court cannot conclude that there is no set of facts that the Village can prove that would afford it relief under Count 1.

2. Count 2 States a Claim for Nuisance Arising Through Prestige's Violation of Village Code Section 14.2104(G)(6)

Section 14.2104(G)(6) of the Village Code (emphasis added) provides:

The release of odorous matter from **any** industrial district across residence or business district boundary lines shall be so controlled that, at ground level or at habitable elevations, the concentration shall not exceed the odor threshold level. **Further, the release of odorous matter across lot lines shall not become [1] a nuisance or [2] source of discomfort to neighboring uses.**

(Ccl, ¶ 154)

An odor related “nuisance,” as defined by the Village Code, is a subjective standard:

[t]o use any premises to create an offensive smell which taints the air and renders it unwholesome or unreasonably disagreeable to other persons.

Village Code § 14.2104(G)(1). (Ccl, ¶ 155) “No business, occupation or activity, licensed under this code or not, shall be conducted or operated so as to constitute a nuisance or so as to amount to a nuisance in fact.” Village Code § 11.3401. (Ccl, ¶ 156) The Village Code further provides in part that “injunctive relief may be sought to prevent or restrain violations of this article^[1].” Village Code § 23.1404.

Prestige’s operation of the Facility releases odorous matter that crosses lot lines. (Ccl, ¶ 157) The odorous matter causes adverse health impacts on the local residents, including young students, and business employees, and adversely effects business operations of neighboring businesses. (Ccl, ¶ 158) The odorous matter is a source of discomfort to neighboring uses. (Ccl, ¶ 159) Moreover, the odorous matter is an offensive smell which taints the air and renders it unwholesome or unreasonably disagreeable to other people. (Ccl, ¶ 160)

The complaints from residents, businesses, schools, and parents regarding the noxious

¹ This includes “the use of any premises to create an offensive smell which taints the air and renders it unwholesome or unreasonably disagreeable to other persons [and] nuisances defined anywhere within the Village Code.” See Village Code § 23.1403 labelled Enumerated Nuisance.

odors emitted by the Facility during its operations demonstrates that Prestige releases odorous matter across its lot lines and the lot lines of neighboring residents, businesses, and schools in violation of Section 14.2104(G)(6) to become a nuisance and a source of discomfort to its neighbors and their use and quiet enjoyment of their property. (Ccl, ¶ 161)

The Village has a clear and compelling interest in the enforcement of the Village Code provisions prohibiting nuisance activities or create sources of discomfort to Village residents and businesses. (Ccl, ¶ 162)

3. Count 3 States a Claim for Common Law Public Nuisance.

The Illinois Constitution of 1970, Art. XI, § 2, provides that, “[e]ach person has the right to a healthy environment.” (Ccl, ¶ 164) Residents living in the vicinity of Prestige have the right to the enjoyment and use of their property. (Ccl, ¶ 165) Children have the right to be outdoors without becoming nauseous and ill from exposure to noxious odors. (Ccl, ¶ 166) Local businesses have the right to operate without noxious odors inhibiting their ability to operate. (Ccl, ¶ 167) Public policy encourages these types of uninhibited uses. (Ccl, ¶ 168)

The Village has the right and the obligation to enforce its ordinances and protect the health, safety, and welfare of the community. (Ccl, ¶ 169) Since December 2023, hundreds of complaints about the effects of the noxious odor emissions from the Facility during its operations indicate Prestige’s conduct threatens public health and safety. (Ccl, ¶ 170)

Prestige’s operations that continually emit noxious odors beyond the Facility and the lot lines of its property violate Village Code provisions intended to promote the health, safety and welfare of the community. (Ccl, ¶ 171) Prestige’s continued operation violates the Constitutionally guaranteed public right to a safe and healthy environment. (Ccl, ¶ 172) The interference caused by

Prestige's operation is substantial and unreasonable. (Ccl, ¶ 173)

Prior to Prestige initiating operations in 2019 at the Facility, the Village received no complaints about noxious odors preventing residents located in close vicinity to the Facility from the quiet enjoyment of their property. (Ccl, ¶ 174) Prior to Prestige initiating operations at the Facility, the Village received no complaints about noxious odors adversely affecting any business located in close vicinity to the Facility. (Ccl, ¶ 175) Prior to Prestige initiating operations at the Facility, the Village received no complaints about noxious odors adversely affecting pre-school and school children. (Ccl, ¶ 176) Since December 2023 to the present when Prestige alleges to have "fixed" the odor problem, the Village has received approximately 250 complaints about noxious odors emitted from the Facility during its operations that have adversely affected the rights of residents, including school children, and local businesses. (Ccl, ¶ 177)

C. The Court should Deny Prestige's Motion for Judgment on the Pleadings because the Well-Pled Allegations Establish Village Code Violations and a Common Law Nuisance.

Prestige contends that it is entitled to judgment on the pleadings by making three arguments: 1) the Village has no evidence that Prestige violated the Supposed Scentometer Standard; 2) a permanent injunction barring Prestige from continuing violations of Village Ordinances impermissibly alters the *status quo* between the parties; and 3) the Village failed to allege either an irreparable injury or an inadequate remedy at law arising from Prestige's conduct. As stated more fully below, all three arguments lack merit because, among other things, 1) none of the Village's claims are based on the Supposed Scentometer Standard; 2) while preserving the *status quo* is part of a temporary or preliminary injunction analysis, it has no application to a decision to enter a permanent injunction; and 3) the Illinois Supreme Court has explained that

when a municipality's ordinances authorize the municipality to seek an injunction for a violation of those ordinances, Court has no equitable discretion and, if the municipality proves the violation, the court must enter an injunction (in other words, the municipality need not prove an irreparable injury or inadequate remedy at law to be entitled to relief). In any event, Prestige's repeated and continuing emission of noxious odors in violation of the Village Code are an irreparable injury without an adequate remedy at law.

1. The Village Code does not require the Village prove Prestige violated the Supposed Scentometer Standard.

Prestige distorts the requirements of the Village's counterclaim and then complains that the Village has not alleged those distorted requirements, i.e., the Supposed Scentometer Standard:

the Counterclaim fails to make a single allegation that Prestige is releasing odors detectable in the ambient air after it is diluted with 24 volumes of odor free air as measured by a Scentometer. The Counterclaim also fails to allege that an objectionable odor nuisance from the Facility exists on neighboring properties surrounding the Facility.

(Mot. at 11-13) Prestige then contends – through an affidavit to its motion – that none of Prestige's immediate neighbors have complained about any odors to Prestige or the Village. (On this last point, the Court should disregard the argument as Prestige has improperly gone beyond the pleadings to raise this argument.)

The easy answer to Prestige's contentions is found in an examination of each of the Village's counterclaims.

Count I seeks an injunction based on Prestige's failure to limit its operation of its facility to a Light Manufacturing use pursuant to its business license and the Village Code. As the Village alleges in Count I, this is the result of Village Code § 14.2401 limitation of Light Manufacturing

to those facilities in which the manufacturing processes “do not create ... odors, ... or health or safety hazards outside of the building or lot” where such manufacturing occurs. If Plaintiff succeeds in proving the offensive odor crossed the lot line, then it is entitled to relief on Count 1. Notably, Village Code § 14.2401 does not impose the Supposed Scentometer Standard upon the Village.

The Counterclaim contains significant allegations of odors emanating beyond Prestige’s lot lines. Both historically—when, after complaints, Prestige admitted it violated the code and pledged to come into compliance (Ccl. ¶ 42-43, 50-51), engaged in several self-selected odor mitigation remedies even after it performing tests in which Prestige claims showed it no longer violated the Village Code (Ccl. ¶ 55-57, 60-62, 64-67, 74, 77, 89-90). And currently, via over 300 complaints since December 2023 (Ccl. ¶ 99-100) verified by the Village and MPPD (Ccl. ¶ 86-87), children attending Park View Montessori becoming ill due to the odors which forced the school to curb its State required outdoor (Ccl. ¶ 101-116), odors causing a local public school student to become physically ill while waiting for a school bus (Ccl. ¶ 117-120), and interfering in a local business’, Mizkan, operations (Ccl. ¶ 123-135).

Count 2 alleges a nuisance arising by way of Prestige’s continuing violation of Village Code § 14.2104(G)(6) due to repeated releases of odorous matter which is either a Village-code defined nuisance or a source of discomfort to neighboring uses. Count 2 has three independent tests from which the Village can determine a violation. The first is a determination that the odor “concentration shall not exceed the odor threshold level.” “Threshold level” is not defined, and thus is likely why Prestige argues that the Supposed Scentometer Standard is somehow applicable.

However, Prestige ignores the second and third independent tests. One of which is if the release of odorous matter across lot lines becomes a nuisance which, as defined by the Village

code, forbids the use of a “premises to create an offensive smell which taints the air and renders it unwholesome or unreasonably disagreeable to other persons.” Village Code § 14.2104(G)(1),(6). The other of which is whether the release of odorous matter across lot lines becomes a “source of discomfort to neighboring uses.” *Id.* The Counterclaim is replete with allegations which when viewed in the light most favorable to the Village amply demonstrate an obnoxious odor that crosses lot lines and causes discomfort to neighbors.

Regarding the Supposed Scentometer Standard, even if the Court were to apply it as the “threshold level” referenced under the Village Code (which the Court should not) and even if it were the only test in the Village Code (which it is not), Illinois law holds that the Village need not plead violation of benchmark statistics. In Stop North Point, LLC v City of Joliet, 2024 IL App (3d) 220517 ¶ 62. plaintiffs objected to a proposed industrial business park because, among other things, the business park was a public nuisance. Specifically, the plaintiffs argued that the business park would endanger the health, safety, and welfare of the public along the route of the increased traffic. 2024 IL App (3d) 220517 ¶ 13. The circuit court dismissed the public nuisance claims.

The appellate court reversed the dismissal of the public nuisance claim finding that plaintiffs had met their pleading burden by alleging specific harm would result from increased truck traffic on the route to the proposed business park. Notably, the appellate court rejected the defendant’s claim that the plaintiffs had failed to allege that the proposed business park would “violate any noise or air pollution regulations” stating that while this would be a factor at an evidentiary hearing on the claim, it was not a “pleading requirement.” 2024 IL App (3d) 220517 ¶ 64- 65 (“We do not agree with the need for specific benchmark statistics at the pleading stage”).

In this matter, as discussed in more detail in the summary judgment portion of the brief, the Village is having testing done and the testing exceeded the levels that even Prestige is

advancing in Supposed Scentometer Standard.²

Count 3 is a claim for common law nuisance. To plead a public nuisance cause of action, a plaintiff must allege (1) a right common to the general public, (2) the transgression of that right by the defendant, and (3) resulting injury. Stop North Point, LLC v City of Joliet, 2024 IL App (3d) 220517 ¶ 62. The Village has plead the required elements of a public nuisance claim. (Ccl. ¶ 171-177)

2. *A permanent injunction can alter the status quo.*

Prestige contends that a permanent injunction is unavailable to the Village because awarding such relief would alter the *status quo* between the parties. In other words, Prestige contends that because the *status quo* was that it was violating the law, the Village cannot obtain permanent injunctive relief to bar the violation of law since that would alter the *status quo*. This contention is preposterous and should be quickly rejected by this Court.

As the Supreme Court has explained, The primary purpose of a preliminary injunction is “to preserve the *status quo* pending a decision on the merits of a cause.” Postma v. Jack Brown Buick, Inc., 157 Ill.2d 391, 397 (1993). A court does not determine the controverted rights or decide the merits of the case but, rather, preserves the state of affairs until a final judgment can be rendered. Kalbfleisch v. Columbia Community Unit School Dist., 396 Ill.App.3d 1105, 1112 (2009). Thus, a party requesting preliminary injunctive relief must show that it has raised a fair question about the existence of a protectable right “*and* that the court should preserve the *status quo* until the case can be decided on the merits.” (Emphasis added.) Buzz Barton & Associates,

² Prestige advocates a 24 D/T standard which only applies when a property is solely bordered by industrial premises. 35 Ill. Admin. Code § 245.121(b) A location that is adjacent to “residential”, “institutional”, or “educational” premises, as Prestige is here, the appropriate standard is 8 D/T. 35 Ill. Admin. Code § 245.121(a)

Inc. v. Giannone, 108 Ill.2d 373, 382 (1985).

In contrast, a permanent injunction is a final adjudication on the merits, there is no need to preserve the *status quo* so that the Court will have the ability to enter a final ruling in the future. Indeed, no Illinois case has ever held that a permanent injunction should be denied because it failed to preserve the *status quo*. The sole case that Plaintiff relies on for this argument, Alpha Sch. Bus. Co. v. Wagner, 391 Ill. App. 3d 722 (1st Dist. 2009), makes no such holding. The Alpha trial court dismissed a claim seeking permanent injunctive relief because the plaintiff:

had not, during the prior two years the litigation had taken place, sought a preliminary injunction to preserve the status quo of the parties, and because the conditions surrounding the parties had changed, issuing a permanent injunction would be ineffective and inappropriate....

391 Ill.App.3d at 731. And, the appellate court affirmed that dismissal holding that because the plaintiff had failed to seek preliminary injunctive relief when they filed their original complaint, a permanent injunction could not “turn back the hands of time” to the filing of plaintiff’s complaint nearly two and a half years earlier. 391 Ill.App.3d at 744.

3. *The Village does not need to establish an irreparable injury or an inadequate remedy at law, even though it does so anyway.*

Prestige’s final argument that it is entitled to a judgment on the pleadings is its claim that the Village has failed to establish facts demonstrating either an irreparable injury or an inadequate remedy at law. In cases arising under the Court’s inherent equitable authority, a plaintiff seeking an injunction must normally allege facts sufficient to show (1) it has a clearly ascertainable right in need of protection; (2) it will suffer irreparable harm without the protective remedy; (3) it has no adequate remedy at law; and (4) it is likely to succeed on the merits. Village of Riverdale v. Allied Waste Transp., Inc., 334 Ill.App.3d 224, 228 (1st Dist. 2002).

However, where the State or a governmental entity like the Village is expressly authorized by statute to seek injunctive relief, the traditional equitable elements for injunctive relief need not be satisfied. City of Rock Falls v. Aims Industrial Services, LLC, 2024 IL 129164 at ¶20; People ex. rel. v. Sherman v. Cryns, 203 Ill.2d 264, 277 (2003). As the court explained in City of Highland Park v. Cook County, 37 Ill.App.3d 15, 20 (1st Dist. 1975), requiring a party to allege irreparable harm as a basis for injunction may be a “sound theory” where a private party brings the action, but “it is not when a city or other public body brings the action alleging violation of its ordinances and state statutes, with resulting damages to its residents.”.

In City of Rock Falls, a landowner refused to comply with an ordinance that required it to connect to the municipal sanitary sewer system. 2024 IL 129164 ¶¶ 4, 5. The city filed an action for injunctive relief to require the landowner to comply with the ordinance. 2024 IL 129164 ¶ 8. After a bench trial, the trial court determined the only question for it was whether the injunctive relief that required the defendant to connect to the municipal sewage disposal system was appropriate. 2024 IL 129164 ¶ 11. The trial court balanced the equities between the parties when ruling on the city’s petition for injunctive relief, and concluded that, based on “the fairness to everybody, the City’s request for injunctive relief is denied.” 2024 IL 129164 ¶ 12. After the appellate court reversed; the Supreme Court granted leave to appeal. 2024 IL 129164 ¶ 16.

The Supreme Court affirmed the appellate court and expounded on its prior holdings to explain that the circuit court had no equitable discretion, finding that:

[People v.] Cryns[, 203 Ill.2d 264 (2003).] recognized the distinction between a suit seeking injunctive relief pursuant to a court's inherent equitable authority and one seeking relief pursuant to a statute. In the latter situation, the equities have, in effect, already been balanced by the legislative body, and that balance is reflected in the policy choices contained within the statute. A court is not free to disregard or "rebalance" the policy determinations made by a

legislative body. See, e.g., Roselle Police Pension Board v. Village of Roselle, 232 Ill.2d 546, 557 (2009). Accordingly, when a trial court is confronted "with a continuing violation of statutory law, it has no discretion or authority to balance the equities so as to permit that violation to continue." Zygmunt J.B. Plater, *Statutory Violations and Equitable Discretion*, 70 Cal. L. Rev. 524, 527 (1982); see also, e.g., 42 Am.Jur.2d Injunctions § 25 (October 2023 Update) ("A statutory request for injunctive relief is governed by the requirements of the statute, and express statutory language supersedes common-law requirements.").

2024 IL 129164 ¶ 21.

Thus, because the Village Code § 23.1404 expressly provides that "[i]njunctive relief may be sought to prevent or restrain violations of this article [which includes Enumerated Nuisances under § 23.140], both City of Rock Falls and Cryns hold that the Village need not prove an irreparable injury or lack of an adequate remedy at law. Instead, the Supreme Court held that the Village need only prove a violation of its Village Code, and this Court must enter an injunction. The Village has alleged sufficient facts indicating Prestige violated Mount Prospect ordinances; therefore, the Village does not have to satisfy the traditional elements required for a permanent injunction, including irreparable harm and lack of an adequate remedy at law.

In any event, there can be no doubt that the Village has in fact alleged an irreparable injury/inadequate remedy at law here as the Village has alleged that the Plaintiff here is engaged in a continuing violation of the Village's ordinances. (Prestige's contention that some individual's might have damage claims for which they could be compensated in their personal claims against Prestige does not demonstrate an adequate remedy for the Village's injury from Prestige's being unable act to preserve the health, safety, and welfare of the community.)

* * *

As this Court cannot conclude that, as a matter of law, the Village can prove no set of facts

on its Counterclaims which would allow relief to be entered in its favor, Prestige's Motion for Judgment on the Pleadings must be denied.

D. Because There Are Genuine Issues of Material Fact, Prestige's Motion for Summary Judgment Must be Denied.

Prestige also moves for summary judgment on the Village's Counterclaims contending that there is no evidence that Prestige is emitting odors in excess of the legal thresholds, *i.e.*, the Supposed Scentometer Standard and, according to Prestige, its Mostardi Platt Investigation demonstrates that it did not exceed its Supposed Scentometer Standard. Because, as demonstrated above in Section C.1., none of the Village's counterclaims rely on the Supposed Scentometer Standard for resolution, this motion can be denied as irrelevant. Moreover, because Prestige's proffered evidence – the Mostardi Platt Investigation Odor Report — is impeached by the verified allegations of the counterclaims (Ccl. ¶ 99-100, 86-87, 101-135) and Prestige's own actions in altering its odor mitigation system after the reports (Ccl. ¶ 55-57, 60-62, 64-67, 74, 77, 89-90) the proffered evidence is subject to a genuine issue of material fact. And, in any event, there is substantial evidence which raises a genuine issue of material fact as to whether the Village can demonstrate a violation of the Village ordinances at issue here even under the Supposed Scentometer Standard.

1. Additional Evidence Demonstrating a Genuine Issue of Material Fact

The Village has substantial evidence, including measurable scientific data, demonstrating that Prestige violated the Ordinances at issue here and that Prestige has committed a common law nuisance. Prestige ignores this evidence and falsely claims that the Village relies entirely on hearsay complaints from Village agents and constituents and Des Plaines residents.

In August 2024, the Village engaged Trinity Consultants, Inc., (“**Trinity**”), an independent agency that, among other things, tests odors. Trinity performed several odor measurement readings over consecutive business days using three separate field technicians over a week and a half time period. (Ex. K, Ex. 1). Exhibit K is the Declaration of Angie Wanger and Exhibit 1 to Exhibit K is a copy of Trinity’s report.³

Trinity uses a commonly accepted scientific standard of measuring odor units on a relative-strength scale. (Ex. K, Ex. 1) This is the same standard of measurement that is used in Prestige’s Supposed Scentometer Standard. (Second Declaration of Angie Wanger (Ex. A), ¶ 3) Typically, a reading of above 7 odor units dilution to threshold (“D/T”) is a common measurement threshold employed by states, regulatory bodies, and municipalities to determine a nuisance. (Ex. K, Ex. 1) Any reading above 30 D/T is considered nauseating and a serious nuisance. (Ex. K, Ex. 1) Trinity used a hand-held monitoring device used to take the measurements is known as a field olfactometer. (Ex. K, Ex. 1) This particular field olfactometer is called a Nasal Ranger. (Ex. K, Ex. 1) Another type of field olfactometer is called a Scentometer. (Ex. A, ¶ 4) The Nasal Ranger and Scentometer function under the same principles and a study comparing the two declared that there was no significant difference between the accuracy of the two devices. (Ex. A, ¶ 5)

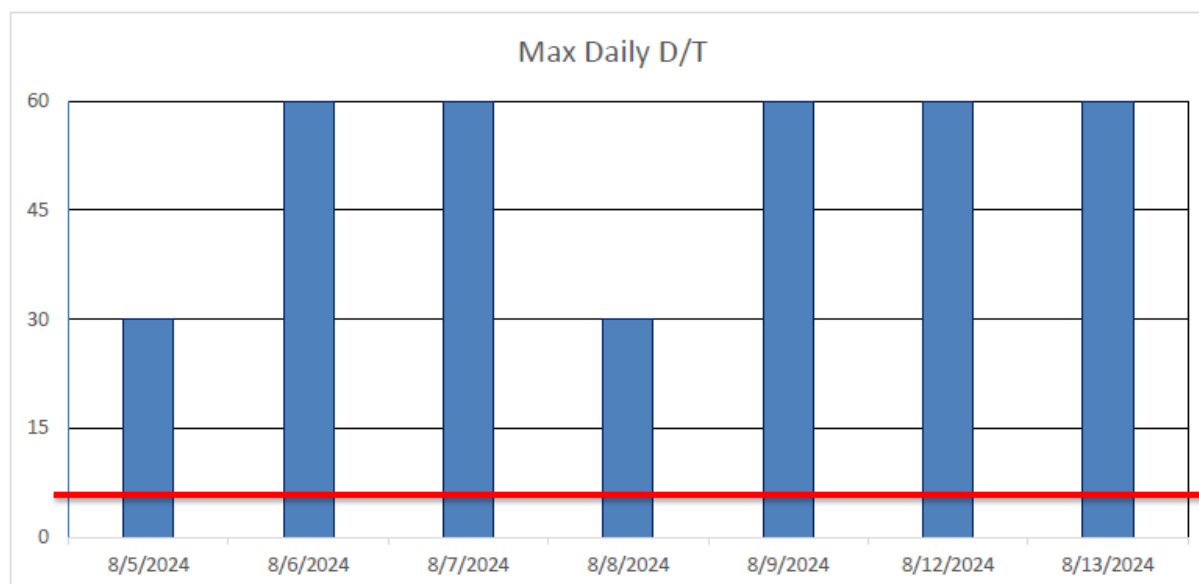

While a field olfactometer measures the strength of the odor, the perception of an odor (e.g., unpleasant or offensive) is also important. (Ex. K, Ex. 1) Trinity used what is known as an odor descriptor wheel to describe the scents. (Ex. K, Ex. 1) The odor descriptor wheel contains a category for “Offensive” scents. (Ex. K, Ex. 1 – Attachment 1) Within this category are descriptors such as “burnt”, “putrid”, “rancid”, “spoiled milk”, and “vomit”. (Ex. K, Ex. 1 – Attachment 1)

³ For consistency, counsel is using the same Exhibit designation that it used in its Emergency Motion for Temporary Restraining Order and the Setting of a Preliminary Injunction Hearing (“**Motion**”) wherein counsel attached this declaration as Exhibit K.

Some regulatory agencies, like the Texas Commission on Environmental Quality do not use a numeric odor units test to confirm a nuisance. (Ex. K, Ex. 1) Instead, they use something similar to the odor descriptor wheel to, in a sense, add aggravating factors to their determination. (Ex. K, Ex. 1) For example, a quarterly occurrence of a very strong smell for one minute per month is a nuisance whereas it would take much more frequency for a non-offensive smell to become a nuisance. (Ex. K, Ex. 1)

Trinity's odor testers universally classified the smell emanating from Prestige's facility in the "Offensive" category listing "spoiled milk", "vomit", "rancid" and "cheese" odors. (Ex. K, Ex. 1) Regarding the strength of the odor, there was a reading of 7 D/T or higher every day but one that the testers took a reading. (Ex. K, Ex. 1) On five of the days, the odor testers recorded at least one max reading (60 D/T), with some days recording as many as four 60 D/T readings. (Ex. K, Ex. 1) The chart below shows the maximum daily D/T observations with the red line representing 7 D/T:

Figure 3 – Maximum Daily D/T Observations

These results led Angie Wanger, Managing Consultant for Trinity, to conclude that the “multiple readings per day at levels of 15, 30, 60 D/T, especially of a highly offensive odor, are unprecedented in my past 12 years conducting odor field studies.” (Ex. K, Ex. 1) On August 15, 2024, conditions were rainy preventing outdoor testing. (Ex. K, Ex. 1) However, Trinity was able to take a reading in the Mizkan vinegar lab inside the Mizkan facility. That reading, itself measured as a 30 D/T. (Ex. K, Ex. 1)

Trinity’s testing results demonstrate that an offensive smell that taints the air and renders it unwholesome or unreasonably disagreeable is escaping Prestige’s facility and lot lines to the community at large.

2. The Village also has its own evidence of offensive odors along with anecdotal evidence.

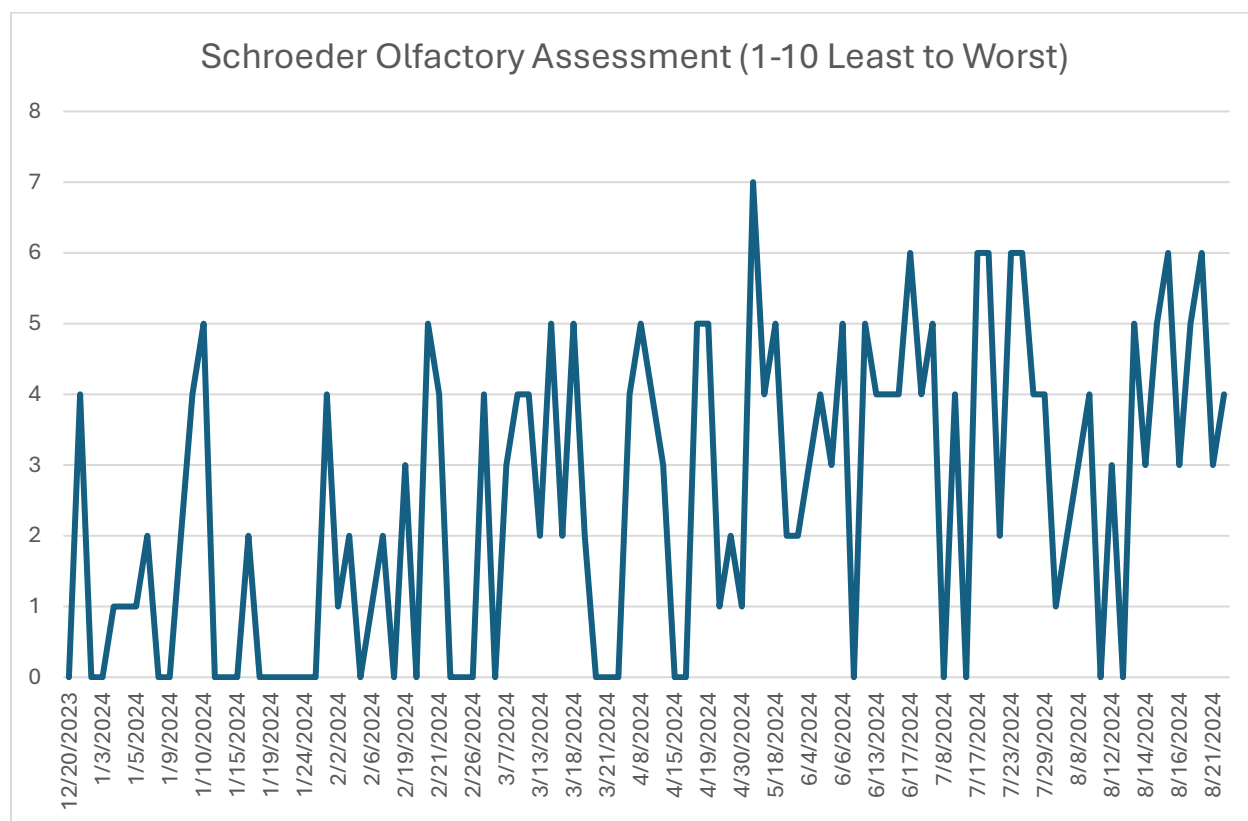

As a result of complaints from the community regarding offensive odors emitted by Prestige’s operations, the Village has monitored the odors in two primary ways. (Ex. C⁴, ¶ 35) First, the Village designed an Olfactory Assessment, wherein, on a periodic basis, the Village visited neighborhoods near the facility, typically during the hours of 5:00 a.m. and 6:00 a.m., to assess the presence of odors. (Ex. C, ¶ 36) The Village intended the assessment to be proactive in establishing a day-to-day consistent baseline rather than being reactive in responding to odor complaints made to the Village regarding Prestige. (Ex. C, ¶ 37)

The Village assessed the smell on a scale of 1 to 10. (Ex. C, ¶ 38) The basis of a 1 on the Olfactory Assessment is that the odors are detectable beyond the lot lines of Prestige’s facility but do not result in a source of discomfort. (Ex. C, ¶ 39) A 2 and above, according to the Village’s

⁴ This was attached as Exhibit C to the Motion and is designated similarly here.

Olfactory Assessment, presents a source of discomfort. (Ex. C, ¶ 40) A 3 and above rises to the level of an offensive smell that taints the air and renders it unwholesome or unreasonably disagreeable. (Ex. C, ¶ 41) The basis of a 10 on the Village's Olfactory Assessment is the worst odor the Village experienced at Prestige's Facility and the worst odor, generally, that the primary employee the Village used to assess the odor has ever experienced. (Ex. C, ¶ 42) Specifically, during a tour of the inside of the facility during one of that Village employee's inspections, a burnt cheese, putrid, vomit-like, and spoiled dairy odor was so pervasive, that, prior to entering his residence at the end of the day, the Village employee needed to disrobe and discard his clothing and even his footwear. (Ex. C, ¶ 42)

Below is a chart reflected the Olfactory Assessments performed by the Village (Ex. C, ¶ 56):

Since the inception of the Village's monitoring activities (December 20, 2023), not a single week went by where there was not at least a 2 on its rating scale. (Ex. C, ¶ 57) While ratings of 1's through 4's remained relatively static, the frequency of 2's and above increased in March of 2024 and continued thereafter. (Ex. C, ¶ 58) Ratings of 5, a rare appearance prior to March of 2024, became a much more frequent reading beginning in March of 2024. (Ex. C, ¶ 59) Mid-June of 2024 saw ratings of 6 make a regular appearance. (Ex. C, ¶ 60) There had been no 6's prior to June of 2024. (Ex. C, ¶ 60) In sum, the odor ratings increased in intensity and frequency of intensity from December 20, 2023 through August 21, 2024. (Ex. C, ¶ 61)

The second way the Village monitored Prestige's compliance was to review odor related complaints about Prestige's Facility from residents, property owners, and businesses and, if possible, investigate them. (Ex. C, ¶ 47) This does not represent the entirety of the complaints, just a subset of those complainants that affirmatively contacted the Village to complain. (Ex. C, ¶ 48) As established in more detail above, the Village has evidence of over 300 complaints since December 2023 (Ccl. ¶ 99-100) many of which were verified by the Village and MPPD (Ccl. ¶ 86-87).

Finally, the Village has anecdotal evidence. As established in more detail above, this includes, children attending Park View Montessori becoming ill due to the odors which forced the school to curb its State required outdoor (Ccl. ¶ 101-116), odors causing a local public school student to become physically ill while waiting for a school bus (Ccl. ¶ 117-120), and odors interfering in a local business', Mizkan, operations (Ccl. ¶ 123-135)

* * *

The Village's scientific evidence, internal monitoring of Prestige's odors, and anecdotal

evidence is more than sufficient evidence for a reasonable finder of fact to determine that Prestige's operations are causing odors that taint the air and render it unwholesome or unreasonably disagreeable and creates a source of discomfort to the neighboring community.

E. Conclusion

For the reasons stated above, this Court should deny Prestige's motion for judgment on the pleadings and partial motion summary judgment.

RE: Village of Mount Prospect – Odor Observations

Dear Lance Malina:

Klein, Thorpe and Jenkins contracted Trinity Consultants, Inc. (Trinity) to collect odor measurement readings in the Village of Mount Prospect, Illinois near and upwind/downwind of the Prestige Feed Products facility located at 431 Lakeview Ct, Mount Prospect, Illinois. This letter provides a brief background on odor measurement, the methodology used and summarizes the data collected.

BACKGROUND

Smell is one of the five human senses. Odor is the perception experienced when one or more chemical substances come into contact with the human sensory systems. Therefore, odor is inherently complex because it is often caused by a mixture of chemical substances and has subjective components associated with its perception by the human sensory systems.

Because odor is subjective and based on the presence of multiple chemical compounds, it cannot be measured using standard units of concentration with a universal instrument. Instead, human noses are the best tools to observe odors. Scientists developed a way to objectively quantify odor by using "odor units" (OUs).

Odor units are a relative-strength scale, based on the concept of dilution principles. As a reference, 1 odor unit (or simply 1 OU) represents the level at which 50% of the population can begin to detect an odor. To better understand this relative scale, if an established odor were measured to be 7 OU, then the odors present in the air would be at a strength that would require 7 dilutions with "clean" air to meet the detection threshold. The detection threshold is defined as the point at which half the population can no longer sense the odor. Dilution-to-threshold (D/T) can be represented by the following equation:

$$D/T = \text{Volume of Carbon-Filtered Air} / \text{Volume of Odorous Air}$$

Numerical odor criteria in North America are typically established based on D/T values as measured in odor units. In jurisdictions that do utilize a numerical odor criteria, this value is typically 7 D/T or 8 D/T. In some jurisdictions, one measurement at or above 7 D/T constitutes a nuisance, whereas other jurisdictions require multiple observations within an hour to establish a nuisance. The location where odors are observed or measured can also vary by rule. The use of 7 D/T is based on scientific publications that have identified that odors above 7 D/T will often result in complaints (i.e., objectionable) with 15 D/T often described as a nuisance, and odors above 31 D/T described as a serious nuisance (i.e., nauseating). (McGinley, 2000 and Huey et al., 1960).

Odor measurements can be completed using the hand-held odor monitoring device such as the Nasal Ranger field olfactometer. Odor measurements can be collected at both a level of Detection Threshold (DT) and Recognition Threshold (RT). DT is the level at which an odor can be perceived but not identified. At this level, it would not be clear how to characterize the odor (i.e., cannot characterize the odor as “chemical” or “petroleum” or “earthy”, etc.)—only that an odor is present, and the level of dilution is sufficient to perceive it. The RT is the level at which a detectable odor can be recognized and identified using word descriptors and occurs at an equal or more concentrated level compared to DT. RT is useful for characterizing odor properties and differentiating distinct odors. For consistency in identifying the character of a specific odor, an odor descriptor wheel is used to define the descriptors of possible scents.

There are other characteristics of odor, beyond the measured odor strength, that can influence the overall perception of an odor. For example, a very offensive odor observed once per year may not be an issue, whereas a very offensive odor observed multiple times per day could cause a nuisance. These characteristics are referred to as “FIDOL”, as listed below.

- ▶ *Frequency* – how often the odor impacts occur
- ▶ *Intensity* – the relative strength (faint to overwhelming; sometimes numerical scale is used)
- ▶ *Duration* – the length of time for a given odor event
- ▶ *Offensiveness* – the character or description of the odor (word descriptors; sometimes numerical scale is used to describe hedonic tone, or the pleasantness, of an odor)
- ▶ *Location* – location of the perceived odor

To help illustrate how the FIDOL principles can be used to confirm a nuisance, the Texas Commission on Environmental Quality (TCEQ) procedures can be referenced. Investigators first categorize the observed odor as not unpleasant, unpleasant, offensive, or highly offensive. From there, the frequency, intensity, and duration are evaluated to determine if the observed odor is a nuisance. A very strong (intensity), highly offensive odor (offensiveness), which occurs for 1 hour (duration) in a single occurrence (frequency) is considered a nuisance. For recurring odors that occur on a weekly or daily basis, the intensity only needs to be strong or moderate, with a duration of only 1 minute, in order to be considered a nuisance. In other words, frequently recurring odors, even for short duration, when highly offensive, are considered a nuisance. (TCEQ, 2007).

ODORS CHARACTERIZED AS **HIGHLY OFFENSIVE**

		FREQUENCY				
		Single Occurrence	Quarterly	Monthly	Weekly	Daily
D U R A T I O N	1 minute	NA	NA	VS	S	M
	10 minutes	NA	VS	S	M	L
	1 hour	VS	S	M	L	VL
	4 hours	S	M	L	VL	VL
	12 hours+	M	L	VL	VL	VL

Note: Intensity – VS=Very Strong, S=Strong, M=Moderate, L=Light, VL=Very Light

Odor Complaint Investigation Procedures – FIDO Chart for Highly Offensive Odors from Texas Commission on Environmental Quality Odor Complaint Investigation Procedures, September 18, 2007.

METHODOLOGY

Three odor assessors pre-screened for odor sensitivity and trained to conduct odor field measurements were available to collect readings during business days August 5 through August 15. The objective of the study was to collect odor measurement readings near Prestige Feed Products and in commercial, industrial, and residential areas near Prestige Feed Products.

The odor assessors were pre-screened for odor sensitivity to ensure they were not overly sensitive or insensitive to odors. Testing was completed using an odor sensitivity test kit purchased from St. Croix Sensory. The test kit utilizes standard odorant n-butanol. The test administrator follows the test procedure by evaluating odor sensitivity of the individual through a 3-Alternative Forced-Choice test method in ascending concentration. The three odor assessors tested within the acceptable range of odor sensitivity.

The odor assessors adhered to best practices prior to their odor sensitivity test as well as whenever they were on-call to collect odor measurements. These best practices included:

- ▶ Refrain from eating, drinking, gum, or mints 30 minutes before sampling
- ▶ Refrain from consumption of spicy foods or caffeine
- ▶ Confirmed they did not have an illness or allergies

Trinity provided an on-call schedule to Bill Schroeder at the Village of Mount Prospect. One consultant was available each business day August 5 through August 15 on a rotating schedule. Bill Schroeder would complete independent observations of the area and would dispatch the team if he observed an odor and visually noticed that Prestige Feed Products was operating. On August 5, two of the three odor assessors met with Bill Schroeder to become familiar with the Village and places where he recommended odor measurements should be collected. Odor measurements collected on subsequent days considered these initial locations but were modified based on wind direction and the conditions observed by the odor assessor.

Odor measurements were collected near the Prestige Feed Products and downwind of the facility based on wind direction as measured with a Kestrel 5500 hand-held meteorological station. Bill Schroeder would also communicate with the odor assessor about locations where he observed and/or was made aware of observed odors by citizens and those locations were included when collecting odor measurements.

The odor assessor spent approximately one minute breathing into a "blank" setting of the Nasal Ranger field olfactometer to "zero out" their nose. Then the odor assessor began at level 60 and worked down to 30, 15, 7, 4, and 2 to determine the DT and/or RT. If an RT was observed, short hand descriptors from the odor descriptor wheel were also recorded. If a DT and/or RT was not recorded at level 2, the odor assessor removed the Nasal Ranger field olfactometer from their face; if DT or RT was observed when not breathing through the Nasal Ranger field olfactometer, the level was recorded as "< 2" (meaning the reading was less than the "2" on the Nasal Ranger field olfactometer). If neither a DT nor RT were measured, the reading was recorded as a "non detect" ("ND"). The odor assessor recorded the following information:

- ▶ Date
- ▶ Acknowledgement of best practices/quality measures
- ▶ Time of observation
- ▶ Location
- ▶ Wind direction (blowing from)
- ▶ Wind speed (miles per hour)
- ▶ Weather (e.g., sunny, cloudy, etc.)
- ▶ Temperature (degrees Fahrenheit)

- ▶ Humidity (%)
- ▶ DT (if measured)
- ▶ RT (if measured)
- ▶ Descriptors (if RT is measured; utilized odor descriptor wheel)
- ▶ Comments

Odor measurements were collected by a single assessor for up to two hours in a single business day.

RESULTS

Odor assessors collected odor measurements beyond the Prestige Feed Products facility property during the mornings of August 5-9 and August 12-14. The assessors detected a high frequency of strong odors described as "spoiled milk", "vomit", "rancid", and "cheese" off-property/downwind of the Prestige Feed Products facility on seven of these eight days (August 5-9 and August 12-13). The odor assessors noted the unique character of the odor emitted by Prestige Feed Products by standing at the property line/immediately downwind when the site was operating and determined that the "spoiled milk", "vomit", "rancid", and "cheese" odors appear to be attributed to their operations.

The odor assessors recorded odor observations at 26 outdoor locations, depicted on the map in Figure 1. Some of these locations represent multiple individual points (e.g., residences/businesses on the same/adjacent streets) but are consolidated on the map. Ten to fourteen locations were visited each day in a 2 hour period, so not all locations were visited each day. Winds were typically blowing from the NW, N, and NE; one day winds were blowing from the SE. On August 15 it was actively raining in the morning, so odor observations were recorded indoors at locations #27-29. These indoor readings are discussed later.

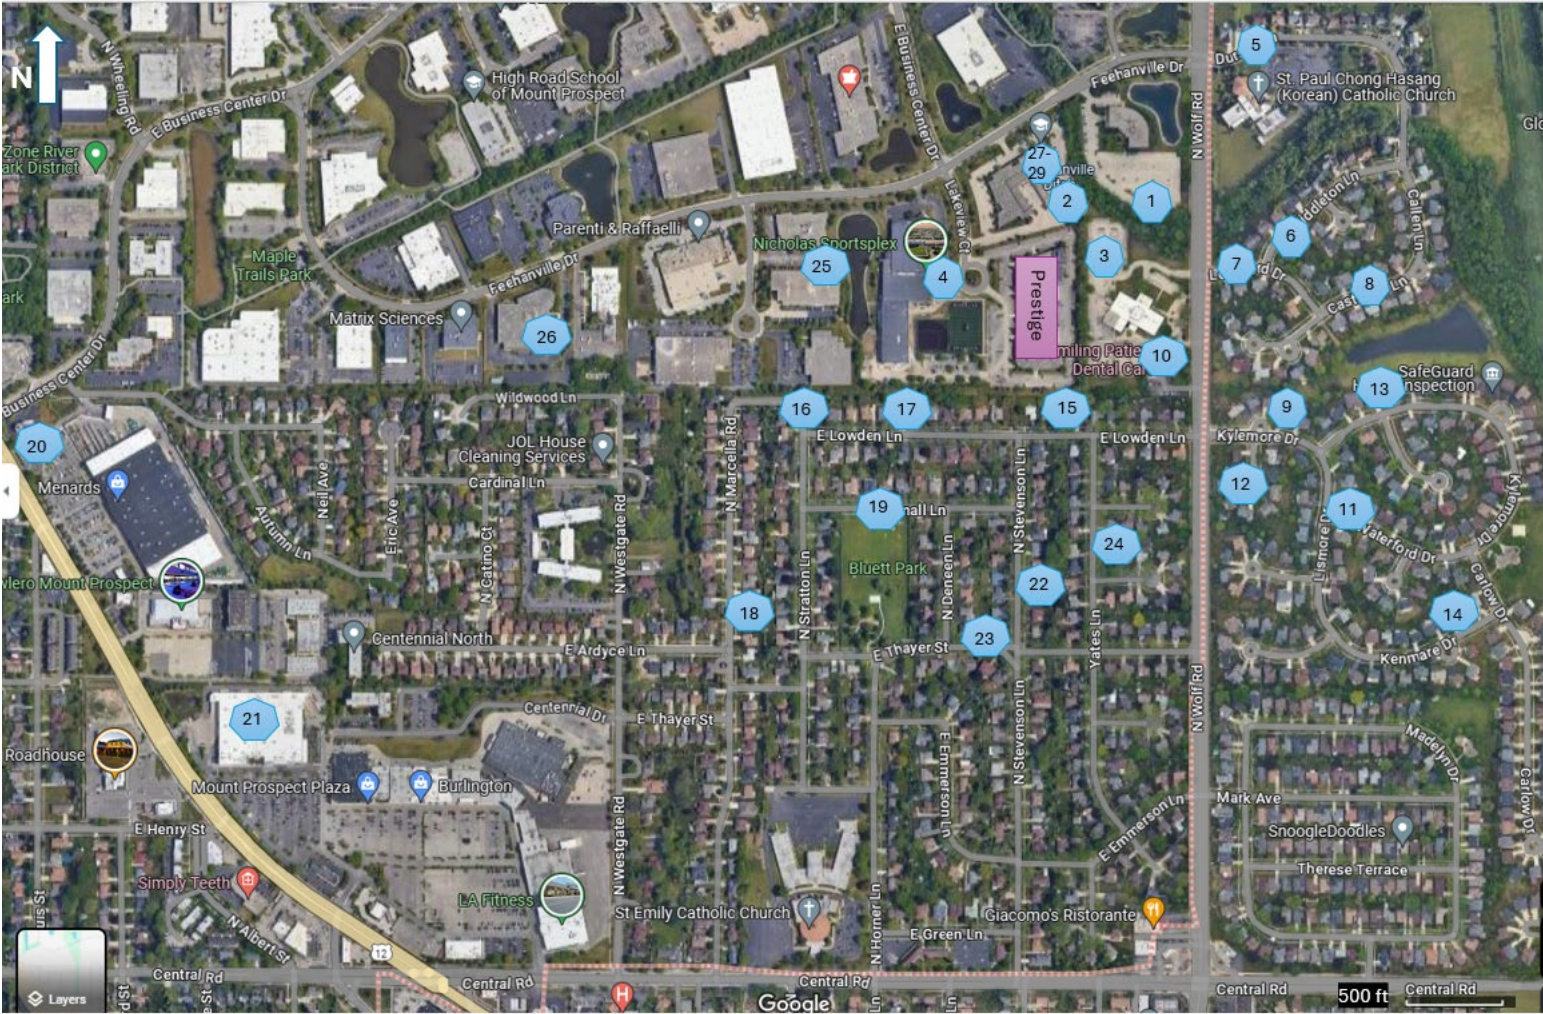

As previously noted, 7 D/T is often established as a nuisance threshold. On seven days (August 5-9 and August 12-13), the odor assessors recorded at least two observations of 7 D/T or higher. On five of these days, odor assessors recorded at least one 60 D/T, with some days recording as many as four 60 D/T observations which is nearly double the threshold of 31, identified as a serious nuisance. All three odor assessors observed odors as high as 60 D/T. Figure 2 shows a map combining data from all seven days where strong odors likely attributable to Prestige Feed Products were noted off property. As noted in the legend, different color markers are used to show locations where a 7 D/T or higher was recorded once, twice, or three or more times. Locations denoted with a bold red outline are where 60 D/T was recorded.

To provide another visual, a bar graph is included in Figure 3 which shows the maximum D/T recorded each day. A red horizontal line shows the 7 D/T threshold. For each of the seven days, the odor assessors recorded odor observations above 7 D/T, at levels of 30 or 60 D/T, which can be considered a serious nuisance.

On August 15 conditions were rainy such that the odor assessor could not collect odor measurements outdoors. Odor measurements were collected indoors at Mizkan and Park View Montessori. Odor measurements of 30 D/T and 7 D/T were recorded inside the Mizkan vinegar lab and inside the utility room near the vinegar lab, respectively. The odors observed were described as "spoiled milk" and "vomit". Mizkan was not operating when these measurements were collected.

Odors likely attributable to Prestige Feed Products were observed at several locations off-property at a strength and frequency that would indicate nuisance conditions. Multiple readings per day at levels of 15, 30, 60 D/T, especially of a highly offensive odor, are unprecedented in my past 12 years conducting odor field studies.

Certified Manager, No. 11973

TECHNICAL EXPERTISE

Odor Monitoring and Management – Designed and implemented odor monitoring programs to collect ambient air odor information in support of odor resolution projects. These projects include baseline studies, investigative analyses, and complaint response. Familiar with European field study methods described in EN16841. Developed best practice protocols for field odor assessors and experienced in administering odor sensitivity testing. Utilized the FIDOL principles and the Nasal Ranger field olfactometer for observing odor monitoring information. For a specific project, developed complaint response plan, including creation of odor complaint website and telephone hotline, to collect and respond to citizen odor complaints from surrounding communities for a two year period.

SUMMARY OF EXPERIENCE

Ms. Wanger is a Managing Consultant in Trinity's Minneapolis office. She assists clients in air and odor projects. Her air-related project work involves dispersion modeling analyses, permit applicability reviews, emissions quantification, and preparing permit applications. She is also recognized as an odor expert and odor services lead within Trinity.

She was initially hired due to her undergraduate research project with the Iowa DNR Air Quality Bureau. In her research, she investigated substitution methods for upper air meteorological data and evaluated the impacts of substituted data on AERMOD performance. She began her career with Trinity as an air dispersion modeling expert, experienced with U.S. EPA's preferred model AERMOD as well as SCREEN3 and the fogging module of CALPUFF. She has experience conducting air, odor, and fogging/icing modeling.

She has experience completing state and federal air permit applicability reviews for various industries. She has worked with chemical processing and manufacturing, concrete, electric power generation and utilities, electronics and appliance recycling, fiberglass products, hot mix asphalt, lime, medical device manufacturing, refined petroleum pipelines, and storage terminals.

Her odor project experience includes odor sampling, monitoring, modeling, complaint response and policy review/development. She is experienced utilizing the Nasal Ranger field olfactometer along with the FIDOL principles for gathering field observations. She has worked with private industry, government, tribal government, and attorneys, thereby approaching odor projects with a varied perspective. She teaches Trinity's odor courses and has presented at international conferences on odor topics as well as provided expert testimony.

Odor Sampling and Modeling – Authored and reviewed odor sampling test protocols and building envelope study plans. Collected odor air samples from point and area source locations into Tedlar bags using a vacuum chamber and field dilution probe, as well as summa canisters. Experienced in characterizing analytical laboratory results to literature detection threshold values and integrating detection and recognition threshold odor panel results, incorporating both into air dispersion modeling analyses via AERMOD to consider odor impacts from a facility. Evaluated multiple operating scenarios and incorporated stack height iterations/refinements into modeling analyses to mitigate predicted odor impacts.

Odor Policy and Global Recognition – Conducted international outreach to understand the revision status and content of changes to EN13725. Authored a paper on the misuse of odor units by regulators which was presented at two international conferences. Assisted a County in California in the development of a cannabis odor policy. Discussed benefits and consequences of different types of odor regulations, reviewed draft policy language, and assisted in responses to public comments on the ordinance. Provided ongoing support to the County during policy implementation. Provided technical comments on a recently published international odor modeling handbook authored by over 40 professionals in Asia, Australia, Europe, North America, and South America. Organized and led an international odor conference on odor management in spring 2024.

Expert Testimony & Litigation Support – Provided expert testimony focused on odor analysis, which was part of a class action lawsuit. Prepared an expert report as well as a supplemental report after deposition. Provided litigation support and/or peer review support for the following additional topics:

- ▶ Litigation support: researched international odor policies, practices, and regulations through a review of technical papers and interviews with international odor experts. Findings incorporated into technical arguments.
- ▶ Litigation support: reviewed third-party odor assessment for a concentrated animal feeding operation (CAFO) for swine. Prepared memorandum which critiqued odor emission rates and meteorological data utilized in the odor modeling assessment.
- ▶ Peer reviewer: reviewed expert report related to odor detection thresholds.
- ▶ Peer reviewer: reviewed expert report related to the appropriateness of an air permit for a surface lignite mine.

AERMOD Dispersion Modeling – Over a decade of experience performing air dispersion modeling analyses for state/federal permitting and compliance initiatives for several industries including ethanol, petroleum, lime, chemical processing, hot mix asphalt, steel, roofing products, and electric utilities. Conducted site visits to collect modeling information, including information to support fugitive source parameter characterization. Presented graphical webinars to depict model layout and model results for plant personnel to review. Managed air dispersion modeling projects for PSD permitting, state mandated modeling, and 1-hour SO₂ State Implementation Plan (SIP) development. Experienced in negotiating modeling protocols with state agency modelers in Iowa, Michigan, Minnesota, North Dakota, and Wisconsin.

Prevention of Significant Deterioration Permitting – Participated as a lead consultant in three Prevention of Significant Deterioration (PSD) permitting projects and managed three PSD permitting projects in Wisconsin and Michigan in the power, lime, and chemical processing industries. In support of PSD applications, conducted complex regulatory air dispersion modeling in comparison to the Significant Impact Levels (SILs), National Ambient Air Quality Standards (NAAQS), Class II PSD Increment, and state toxics (Wisconsin's NR445, Michigan's Rule 225). Authored and reviewed permit application components including

emissions quantification, state and federal regulatory applicability reviews, Best Available Control Technology (BACT), air dispersion modeling, additional impacts, and state application forms.

State Construction and Operating Permits – Assessed the applicability of state and federal construction and operating permits for existing sites without a permit as well as proposed sites. Completed applicability determinations for state permitting exemptions for proposed projects in various industries. Authored a variety of state construction and operating permit applications (registration, general, individual state permits, permit amendments) for Michigan, Minnesota, and Wisconsin sources. Evaluated whether operating procedures and plans conform to new and revised permit conditions. Incorporated regulatory changes and proposed conditions in Title V renewal submittals.

Multimedia Modeling – Completed multimedia modeling analyses via AERMOD including fugitive dust optimization from coal piles and material transfer equipment. Evaluated mitigation measures using modeling. As part of a facility-driven safety directive, conducted fogging/icing modeling for three facilities in cold climates (Wisconsin; Alberta, Canada; British Columbia, Canada) via fogging module of CALPUFF. Assessed potential fogging and icing impacts from process stacks located at nearby roadways, including an assessment of a proposed elevated roadway near a facility property.

Annual Emissions and TRI Reporting – Participated in site visits to develop source emissions inventories incorporating existing plans and permit conditions. Gathered information for the quantification of fugitive emissions from material handling. Quantified emissions inventories for power, chemical processing, lime, sandblasting, aggregates, electronics and appliance recycling, and general manufacturing industries. Developed and optimized emissions inventory spreadsheets for state reporting in Michigan, Minnesota, and Wisconsin. Extensive experience with Wisconsin's Air Reporting System Internet Reporting Software. Prepared Toxics Release Inventory (TRI) submittals for chemical processing and sandblasting facilities using EPA TRI-ME software. Assisted in increasing the accuracy of emissions estimates through use of Water9 and various LDAR programs for emissions inventory and TRI reporting for a chemical manufacturing facility.

IN THE CIRCUIT COURT OF COOK COUNTY
COUNTY DEPARTMENT, CHANCERY DIVISION

PRESTIGE FEED PRODUCTS, LLC

Plaintiff/Counterclaim Defendant,

v.

VILLAGE OF MOUNT PROSPECT,

Defendant/Counterclaim Plaintiff.

Case No. 2023 CH 5147

Calendar 14

Hon. Clare J. Quish

Declaration of William M. Schroeder

Under penalties as provided by law pursuant to Section 1-109 of the Code of Civil Procedure, the undersigned certifies that the statements set forth in this instrument are true:

1. I am over the age of 18 years and, if called to testify in this matter, could testify competently to the below facts from personal knowledge.

2. I am submitting this declaration in support of the Village of Mount Prospect's ("**Village**") motion for a Temporary Restraining Order and the Setting of a Preliminary Injunction Hearing.

3. I have been employed by the Village for over eighteen years, the last eight of which I have served as the Village's Director of Building & Inspections Services in the Village's Community Development Department.

4. I have several certifications. Among them, I am a Certified Master Code Professional designated by the International Code Counsel (the "**ICC**"). The ICC is

the leading global source of model codes and standards. I am also a Certified Building Official with the ICC.

5. Among other things, I oversee the Village's code enforcement operations.

6. With respect to Prestige Feed Products, LLC ("**Prestige**"), I had primary responsibility for investigating and substantiating complaints about Prestige's operations.

7. Soon after Prestige began manufacturing operations within the Village, the Village began receiving an unprecedented number of complaints from local residents and businesses about noxious odors arising from those operations.

8. The crux of the complaints was that Prestige's operation of its facility emitted what has been described as a burnt cheese, putrid/rancid, spoiled milk, vomit-type smell. The smell tainted the air and rendered it unwholesome or unreasonably disagreeable, created a source of discomfort, and substantially and unreasonably interfered with residents' (both residential and business) ability to use and enjoy their property.

9. These complaints fell within my purview to enforce compliance with Village Code related to those issues.

10. I, along with other Village employees, have attempted to work with Prestige through the years to get Prestige to comply with the Village's zoning and nuisance ordinances and reduce the noxious odors.

11. For years, beginning in March of 2021, Prestige operated pursuant to a Tolling Agreement wherein, among other things, Prestige agreed to limit its manufacturing operations to late night and early morning hours.

12. Prior similar operating limitations reduced the complaint volume from neighboring members of the community, allowing Prestige the opportunity to remain open in some capacity while it attempted to come into compliance with the Village's zoning and nuisance ordinances.

13. The parties amended and restated the Tolling Agreement on numerous occasions over the next two years. The Village did so based upon what it believed were Prestige's legitimate and good faith efforts to alleviate the odors arising from its manufacturing processes.

14. I, along with other Village staff, hoped that the limited operating hours would spur Prestige to make meaningful progress in its odor mitigation efforts so that Prestige could come into compliance with Village Code.

15. Ultimately, however, I, along with other Village staff, became dissatisfied with Prestige's unwillingness to significantly address the noxious odors emanating from its operations.

16. Instead, we determined that Prestige would only apply "window dressings" that were not designed or capable to remedy the problem.

17. Based on our determination that Prestige was not willing or capable of remedying the problem, the Village, as was its right under the Tolling Agreement, revoked that tolling agreement between the parties effective May 11, 2023.

18. Prestige filed this lawsuit, seeking declaratory relief that it complied with Village Code based upon odor testing it performed, sought to enjoin the Village from curtailing its operations, and sought related damages.

19. Despite Prestige's claimed compliance with Village Code based upon odor testing it performed, Prestige made several changes to its odor mitigation system after its odor testing.

20. Even with Prestige operating the facility at reduced hours, the Village received consistent complaints from neighboring business and residents that Prestige's operation from the facility created odors which penetrated their property, created discomfort for residents in their own property, and significantly impacted their use and enjoyment of the property. These odors were a nuisance.

21. This was the context for the Village making its first motion for a TRO.

22. The TRO was never submitted to the Court for a ruling because Prestige agreed to limit its manufacturing to the hours of 9 p.m. to 5 a.m.

23. While I did not believe this was a long-term solution, it was an acceptable compromise in advance of an injunction hearing. Moreover, the Village was hopeful that this compromise would spur Prestige's efforts to address the odor problem so that Prestige could eliminate the restriction on its manufacturing.

24. Other Village staff agreed and, ultimately, the Village withdrew its motion.

25. Complaints from the community persisted, however, even under limited operating hours.

26. Eventually, I, along with other Village staff, determined that even Prestige's limited operation was not effective in eliminating the odor issue and that Prestige continued to be in violation of the Village's zoning and nuisance ordinances. The Village again made a second motion for a TRO.

27. After the Village filed its second motion for TRO but before a hearing on that motion, Prestige represented that it had recently installed significant new odor mitigation equipment (like other changes Prestige made to its odor mitigation system, these significant changes to Prestige's system occurred *after* Prestige's odor testing).

28. Because Prestige had not previously consulted the Village regarding the installation of the new equipment intended to mitigate the odors, the Village had very little ability to evaluate the equipment or its efficacy.

29. Consequently, I visited Prestige's facility to inspect the new equipment.

30. Based on Prestige's representations about the design of the equipment which appeared to be consistent with my inspection of the facility, I was optimistic that the new odor mitigation equipment could work, and I reported my optimism to the Court.

31. It had been almost three years since Prestige operated during normal daytime hours and, given the situation, I, along with other Village staff, determined the most direct path to test the efficacy of the new odor mitigation system was to actually allow Prestige to operate.

32. This was a risk because the new equipment might prove to be ineffective, but, given the circumstances and what we believed at the time was Prestige's good faith efforts to address the issue, we thought that this would be the quickest and most effective means of testing the equipment.

33. Therefore, on December 14, 2023, I, along with other Village staff, agreed to allow Prestige to operate during daytime hours while Village staff monitored Prestige's compliance with Village Code.

34. I am the person at the Village with the primary responsibility to monitor Prestige's compliance after the December 14, 2023 agreement.

35. I perform my monitoring in two primary ways.

36. First, I designed an Olfactory Assessment, wherein, on a periodic basis, I visited neighborhoods near the facility, typically during the hours of 5:00 a.m. and 6:00 a.m., to assess the presence of odors.

37. My intent with this assessment was to be proactive in establishing a day-to-day consistent baseline rather than being reactive in responding to odor complaints made to the Village regarding Prestige.

38. I assess the smell on a scale of 1 to 10.

39. The basis of a 1 on my Olfactory Assessment is that the odors are detectable beyond the lot lines of Prestige's facility but do not, in my opinion, result in a source of discomfort.

40. A 2 and above, according to my Olfactory Assessment, presents a source of discomfort.

41. While a 3 and above rises to the level of an offensive smell that taints the air and renders it unwholesome or unreasonably disagreeable.

42. The basis of a 10 on my Olfactory Assessment is the worst odor I experienced at Prestige's facility and the worst odor, generally, I ever experienced. During a tour of the inside of the facility during one of my inspections, a burnt cheese, putrid, vomit-like, and spoiled dairy odor was so pervasive, I needed to disrobe prior to entering my residence and discard my clothing and even my footwear.

43. Attached as Exhibit 1 to this Declaration is a complete rubric of my rating scale.

44. I performed several Olfactory Assessments with another Village employee, Brandon Allen.

45. Brandon is the Village's Environment Health Superintendent in the Village's Community Development Department.

46. Brandon is familiar with my Olfactory Assessment rating scale over the course of several joint observations, I trust his independent ratings when, on occasion, he performed observations without me.

47. The second way I monitored Prestige's compliance was to review odor related complaints about Prestige's facility from residents, property owners, and businesses and, if possible, investigate them.

48. This does not represent the entirety of the complaints, just a subset of those complainants that affirmatively contacted the Village to complain.

49. I incorporated both data sets—The Olfactory Assessment and investigation of specific complaints—into a prior affidavit I submitted dated April 2, 2024 that was used in support of the Village’s third Motion for TRO. For ease of use, Exhibit 2 is a copy of my April 2, 2024 affidavit.

50. Like the prior two motions for TRO, however, the Court never ruled on the motion.

51. On June 4, 2024, the Court dismissed the Village’s second amended counterclaim and, as a result, the Village withdrew its motion for TRO without prejudice.

52. While the Village was preparing its third amended counterclaim, I continued my monitoring duties.

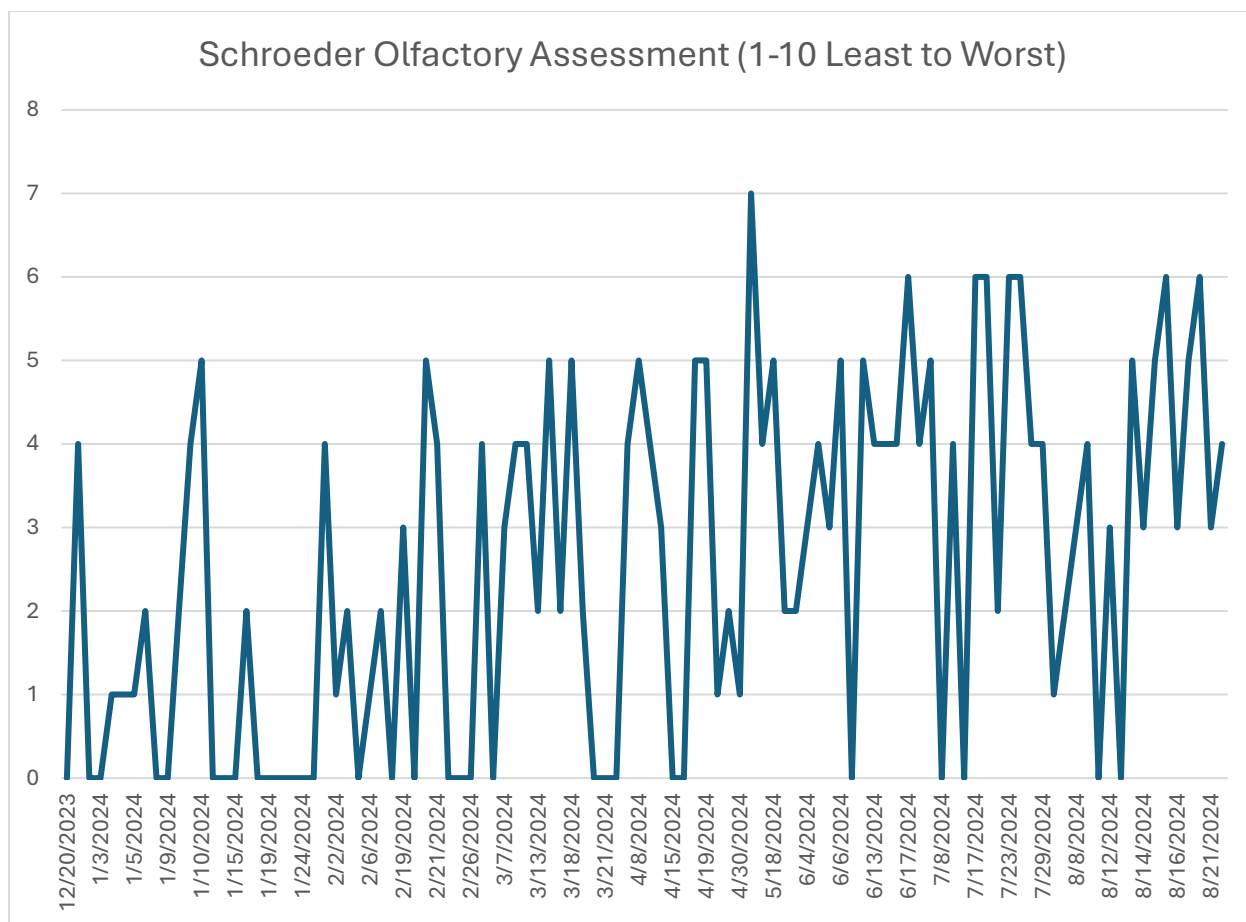

53. I used both the Olfactory Assessment and documentation of specific complaints against Prestige.

54. Attached as Exhibit 3 is a spreadsheet representing every Olfactory Assessment I performed from December 20, 2023 through August 21, 2023.

55. This spreadsheet is a data compilation of the Olfactory Assessments I performed and is part of a regularly conducted business activity.

56. Attached as Exhibit 4 and below is a chart representing the Olfactory Assessments from Exhibit 3.

CHART APPEARS ON NEXT PAGE

57. Since the inception of my monitoring activities (December 20, 2023), not a single week went by where there was not at least a 2 on my rating scale.

58. While ratings of 1's through 4's remained relatively static, the frequency of 2's and above increased in March of 2024 and continued thereafter.

59. Ratings of 5, a rare appearance prior to March of 2024, became a much more frequent reading beginning in March of 2024.

60. Mid-June of 2024 saw ratings of 6 make a regular appearance. There had been no 6's prior to June of 2024.

61. In sum, the odor ratings increased in intensity and frequency of intensity from December 20, 2024 through August 21, 2024.

62. Exhibit 5 is a spreadsheet documenting, by month, the complaints the Village received related to Prestige's operation. Exhibit 5 also contains, in **bold**, my Olfactory Assessment ratings.

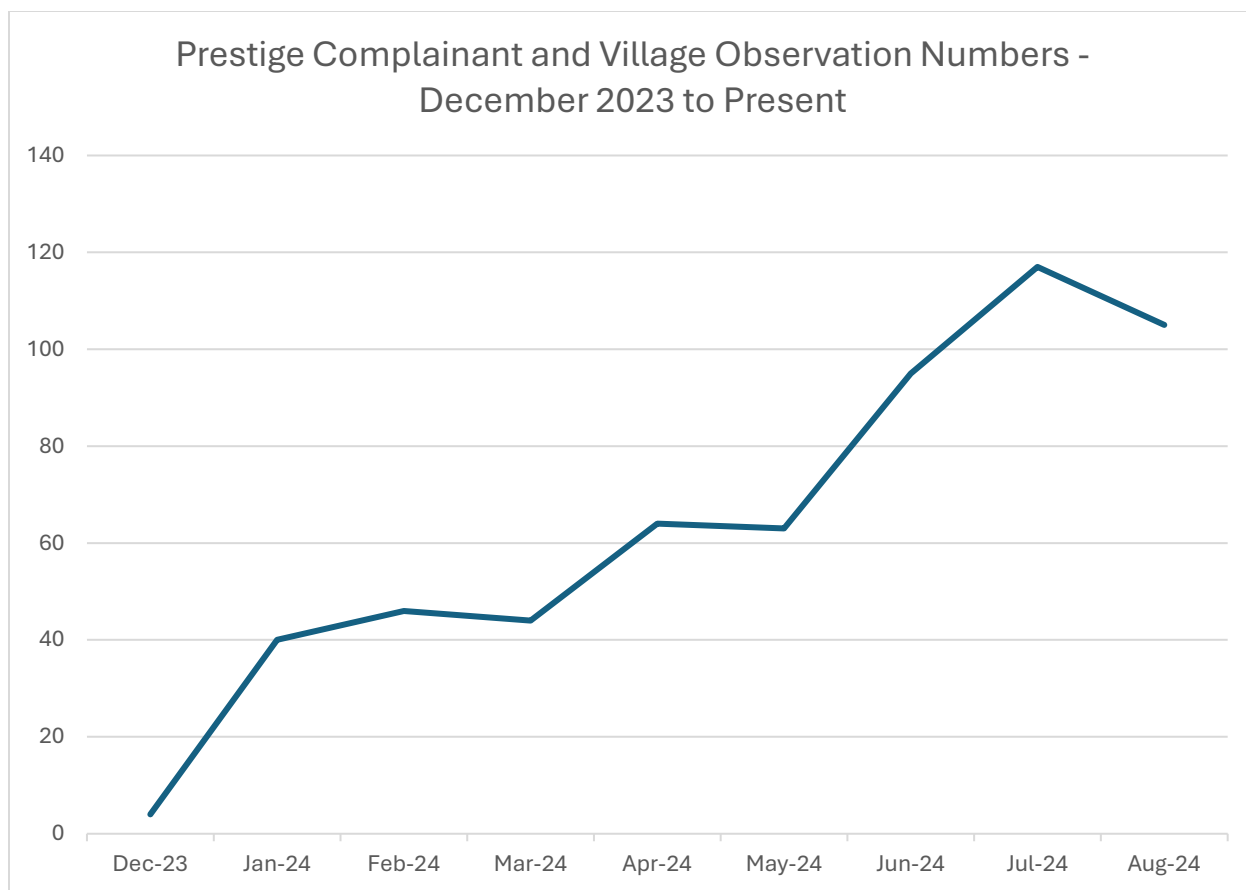

63. Complaints typically are written or telephoned.

64. When they come in, I or Brandon Allen enters the information into our records including, if possible, the name, address, and other contact information of the complainant along with a description of the compliant.

65. This spreadsheet is a data compilation and is part of a regularly conducted business activity.

66. Exhibit 6, reprinted below is a chart showing the volume of complaints represented in Exhibit 5 beginning on December 20, 2023 and going through August 21, 2024.

CHART APPEARS ON NEXT PAGE

67. There is a clear trend showing the increased complaints month-over-month.

68. This trend matches the increase in intensity and frequency of intensity of my Olfactory Assessment ratings.

69. The intensity and offensive nature of the type of smells (burnt, putrid, spoiled, vomit) consistently:

- a. crosses Prestige's facility and lot lines.
- b. taints the air and renders it unwholesome or unreasonably disagreeable.
- c. creates a source of discomfort to neighboring uses.

70. These noxious odors substantially and unreasonably interfere with residents' (both residential and business) ability to use and enjoy their property.

71. The odor emitted from Prestige is more pervasive in intensity and consistent than it was when I submitted my April 2, 2024 affidavit.

72. Prestige informed the Village on August 6, 2024 that it, again, made the independent decision to modify its odor mitigation system. Specifically, Prestige represented that it tested and put into use a new oxidizer by July 31, 2024.

73. The Village has seen no decrease in the frequency or intensity of complaints, nor have I noticed any appreciable difference in performing my Olfactory Assessments since the change.

74. During the August 6, 2024 meeting, Prestige's principal, Joe Pesoli, volunteered that the primary factor in Prestige choosing a "dry" odor mitigation over a "wet" or thermal odor mitigation was its price.

75. The current odor mitigation system is not working. Odors still cross Prestige's facility and lot lines, taints the air and renders it unwholesome or unreasonably disagreeable, and creates a source of discomfort to neighboring uses that is both substantial and unreasonable.

76. The Village has a duty and obligation to protect its residents from Prestige's operation.

DATED: August 21, 2024

William M. Schroeder

Exhibit 1

**Rubric of Schroeder Olfactory Assessment
Of Prestige Facility Odors**

Rating	Description
1	Detectible beyond the lot lines of Prestige's facility but do not result in a source of discomfort.
2	Prestige's facility odor is a source of discomfort.
3	Prestige's facility odor taints the air and renders it unwholesome or unreasonably disagreeable.
4-6	Prestige's facility odor produces a very intrusive, heavy smell that has an increasing effect on breathing, clings to clothes, skin, fabrics, penetrates indoors even with windows and doors closed, and can cling to furnace and air-conditioning filters.
7-8	Prestige's facility odor is sometimes "visible" like a haze/fog, people sensitive to environmental contaminants like pollen and other allergens have increasing difficulty breathing, very difficult to remove off clothes, skin, fabrics, and to remove from inside other homes and buildings.
9-10	Only ever detected inside the Prestige facility, clothes, including shoes, are permanently tainted by the odor.

Exhibit 2

**IN THE CIRCUIT COURT OF COOK COUNTY
COUNTY DEPARTMENT, CHANCERY DIVISION**

PRESTIGE FEED PRODUCTS, LLC, an Illinois
limited liability company,

Plaintiff,

v.

VILLAGE OF MOUNT PROSPECT, an Illinois
municipal corporation,

Defendant.

Case No. 2023 CH 5147

Judge Quish

VILLAGE OF MOUNT PROSPECT, an Illinois
municipal corporation,

Defendant/Counter-Plaintiff,

v.

PRESTIGE FEED PRODUCTS, LLC, an Illinois
limited liability company,

Plaintiff/Counter-Defendant.

Affidavit of William M. Schroeder

I, William M. Schroeder, being first duly sworn upon oath, depose and state as follows:

1. I am employed by the Village of Mount Prospect ("Village") and my current position is Director of Building & Inspection Services in the Village's Community Development Department.

2. In my position as Director of Building & Inspection Services, I oversee the Village's code enforcement operations. To manage code enforcement in the Village, I have knowledge of the Village of Mount Prospect Municipal Code (the "Code") provisions related to zoning and permitted land uses throughout the Village.

3. In December 2023, I learned that Prestige Feed Products ("Prestige"), located at 431 Lakeview Court in Mount Prospect, Illinois, installed equipment designed to abate odor emissions that occurred when it operated its Facility to process animal feed products that included cheese as an ingredient.

4. After Prestige installed the odor mitigation equipment, I began conducting frequent monitoring activities to determine if Prestige production activities violated Code provisions pertaining to permitted or conditional uses for Village zoning districts, including:

- (a) I-1 Limited Industrial District "Manufacturing, Light" as a permitted use. The Code defines "Manufacturing, Light" as follows:

MANUFACTURING, LIGHT: The assembly, fabrication or processing of goods and materials using processes that do not create noise, smoke, fumes, odors, glare or health or safety hazards outside of the building or lot where such assembly, fabrication, or processing takes place, where such processes are housed entirely within a building. Light manufacturing generally includes processing and fabrication of finished products predominantly from previously prepared materials and includes processes that do not require extensive floor areas or land areas. "Light manufacturing" shall not include any use that is otherwise listed specifically in a zoning district as a permitted or conditional use.

Village of Mount Prospect Municipal Code, Chapter 14, Article XIV, § 14.2104.

- (b) The Code defines "Manufacturing, Heavy" as follows:

MANUFACTURING, HEAVY: The assembly, fabrication or processing of goods and materials using processes that ordinarily have greater than minimal impacts on the environment, or that ordinarily have significant impacts on the use and enjoyment of adjacent property in terms of noise, smoke, fumes, visual impact, odors, glare, or health and safety hazards, or that otherwise do not constitute "light manufacturing." Heavy manufacturing generally includes processing and fabrication of large or bulky products made from extracted or raw materials and processes that require extensive floor areas or land area for the fabrication and/or incidental storage of the products. "Heavy manufacturing" shall not include any use that is otherwise listed specifically in a zoning district as a permitted or conditional use.

Id.

- (c) The Code provides that:

The release of odorous matter from any industrial district across residence or business district boundary lines shall be so controlled that, at ground level or at habitable elevations, the concentration shall not exceed the odor threshold level. Further, the release of odorous matter across lot lines shall not become a nuisance or source of discomfort to neighboring uses.

Id. at § 14.2104(G)(1).

- (d) The Code describes a “nuisance” as “[t]o use any premises to create an offensive smell that taints the air and renders it unwholesome or unreasonably disagreeable to other persons.”

Id. at Chapter 23, Article XIV, § 23.1403(F).

- (e) The Code prohibits activity that constitutes a nuisance: “No business, occupation or activity, licensed under this code or not, shall be conducted or operated so as to constitute a nuisance or so as to amount to a nuisance in fact.”

Id. at Chapter 11, Article XXXIV, § 11.3401.

5. To monitor the effectiveness of Prestige’s odor mitigation equipment, I began driving through areas of Mount Prospect and Des Plaines, Illinois, that are near the Facility at approximately the same time in the morning. Specifically, I drove through neighborhoods near the Facility and through the Kensington business park where Prestige is located during the period of 5:00 a.m. to 6:00 a.m.

6. In my position as Director of Building & Inspection Services, I receive complaints – both oral and written – from Village community members about perceived Code land use violations. I investigate such complaints to confirm the legitimacy of these communicated concerns.

7. As part of the monitoring of the effectiveness of Prestige’s odor mitigation equipment, I investigated complaints I received from residents, property owners and businesses regarding noxious smells emitted during operations of the Facility. These investigations occur during my regular monitoring time period and at other times during business hours of 8:00 a.m. through 4:30 p.m., Monday through Friday.

8. During the period of February 1, 2024, through April 1, 2024, I have conducted monitoring activities for the Prestige operations at its Facility. I have recorded the results of the monitoring activities through the emails attached as **Exhibit 1**. I have recorded the results of my monitoring activities as a part of my business activities as the Director of Building & Inspection Services.

9. When I monitor the Prestige Facility operations and I detect an odor that I recognize as emitted by the Prestige Facility, I assess the intensity of the smell on a scale of 1 to 10. Odors at the lower end of my scale are less intense. The higher the number I assign to a detected odor, the greater the intensity of the odor.

10. The monitoring activity I conduct takes place outside and beyond the property lines of 431 Lakeview Court where the Prestige Facility is located. If I detect a noxious odor in a Mount Prospect or Des Plaines neighborhood or in the Kensington business park, such odor has crossed the Prestige property lines and constitutes a Code provision violation.

11. The monitoring records attached as **Exhibit 1** indicate that on a consistent basis during the two-month period of February 1, 2024, through April 1, 2024, I have detected noxious odors at various intensity levels emitted from the Prestige Facility that have crossed over the property lines at 431 Lakeview Court.

12. The monitoring records attached as **Exhibit 1** indicate complaints I received of noxious odors emitted by the Prestige Facility during its operations from residents in the neighborhoods near 431 Lakeview Court, the Park View Montessori School located at 1601 Feehanville Drive, Mount Prospect, and from businesses in the Kensington business park.

13. The monitoring activities I conducted since Prestige installed odor mitigation equipment in December 2023, and the complaints I investigated indicate that the Facility's operations violate the Code provisions referenced above at ¶ 4.

14. I make these statements based upon my own personal knowledge, and I could testify competently thereof if called upon to do so.

15. Nothing further sayeth affiant.

William M. Schroeder

Subject: Prestige complaints today

Caution: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe. -IT Department

This morning we received a total of 6 Prestige smell complaints from their operation. Brandon verified the smell and it is intermittent. Brandon noted it was a 3-4 (out of 10) southeast of the Prestige facility. We received another anonymous complaint this afternoon.

At lunch this afternoon, I ran my usual route that I usually drive through MP and DP. I noted Prestige product smell south of the Prestige facility along Lowden and it was a 3-4 (out of 10). I then ran to Des Plaines and noted a light Prestige smell of a 1 (out of 10) in Longford Glen. I then ran to Mizken and noted a 1 (out of 10) in their parking lot. I then ran to the village hall. No other smells or noises noted. It didn't look like they were operating at the time I noted the smells; it was residual Prestige smell.

Thanks

Arrived in the area about 5:05am, drove my usual route through MP and DP. Prestige was not operating however they were working on equipment inside the facility. I observed the workers through the windows when I was in Mizken's lot. When I was in the Mizken lot, I picked up a slight Prestige odor, about a 1 (on a 10 scale). It was most likely residual because I did not notice any Prestige smells anywhere else. Concluded my observations about 5:35 then did some other code enforcement on some truck parking at a house unrelated to Prestige.

Thanks

We received a couple of complaints about cheese smell from the Stratford and Lowden area this morning. Both Brandon and I performed observations and confirmed the smell at that intersection. I would classify it as 4 (out of 10) at the Stratford and Lowden area. The wind is blowing southwest and we smelled Prestige product along Central Road, it was the strongest west of Rand and Central. I would it wavered between a 1-2 (on a 10 scale). We tracked the smell south of Central down Owen and as far south as St. Paul Church which is off Busse. Additional staff smelled Prestige product around Village Hall (maybe a 1 on a 10 scale). Vary faint here. I measured the distance via aerial google and the distance we can smell the Prestige product is a mile.

After the meeting last night, the Chief let me know that they received a call for service about a noise complaint at Prestige Feed. Since I was still in town, I drove my usual route through MP and DP. I noticed a slight smell of Prestige product in DP, maybe a 1 (on 1-10 scale). I did not notice the noise that they alleged in DP. When I drove to 350 N Wolf, I noticed noise being produced by Prestige. See attached video from last night.

Drove my usual route in MP and DP this morning at 540am. No smells or noise noted from Prestige. Back to hall about 6am.

Drove my usual route in MP and DP this morning at 645am. Wind is blowing towards the north/northeast. I noted Prestige product smell in DP at a 1-2 (on a 1-10 scale) right at the border by Long Meadow subdivision entrance. I drove across into MP again and then through the business park. I noted Prestige product smell at a 1-2 in Mizken's parking lot. Concluded observations at about 7am and then purchased some donuts at Joe Donut for staff.

Thanks

This is a voicemail complaint from the Assistant Director of the school. Brandon will log and contact the Assistant Director to discuss. The message is clear that the students are bothered, and the parents and the school are concerned.

Arrived in the area at 515am. Drove the usual route in MP and DP. It appeared that Prestige was not operating. When I arrived in Mizken's parking lot, the lights were on inside Prestige and the machines were not operating. Through the windows, I saw a staff member making coffee in their break room.

After doing some additional code enforcement on another property, I arrived at the VH about 550am.

Thanks

Good morning; arrived in the area about 520am. Drove my usual route in MP and DP. Prestige was running this morning. I did notice a rancid/nasty smell in the Lowden neighborhood. It was a 1-3 (on a scale of 10) in the Lowden neighborhood in MP. It looks like wind is blowing west/north west. I noticed the rancid/nasty smell in the Mizken parking lot at about 1-2. I returned to drive through DP and MP again; the smell was still there. Arrived back at the hall about 550am.

Thanks

Afternoon,

Attached is a phone message from the assistant director of the Montessori school from this morning. She again notes that multiple children and even parents complain of the intensity of the smell. I was onsite about 11:15 AM and did note the smell to be about a 2-3 at the parking lot of the school. Thank you.

Sincerely,

Subject: Prestige observations this morning #2 (complaints received)

The Village received complaints from both Mizken and Montessori School in the Business Park. 20 minutes after receiving the complaints, we went and performed our normal observations both in MP and DP. I did notice Prestige smell at both facilities this morning at

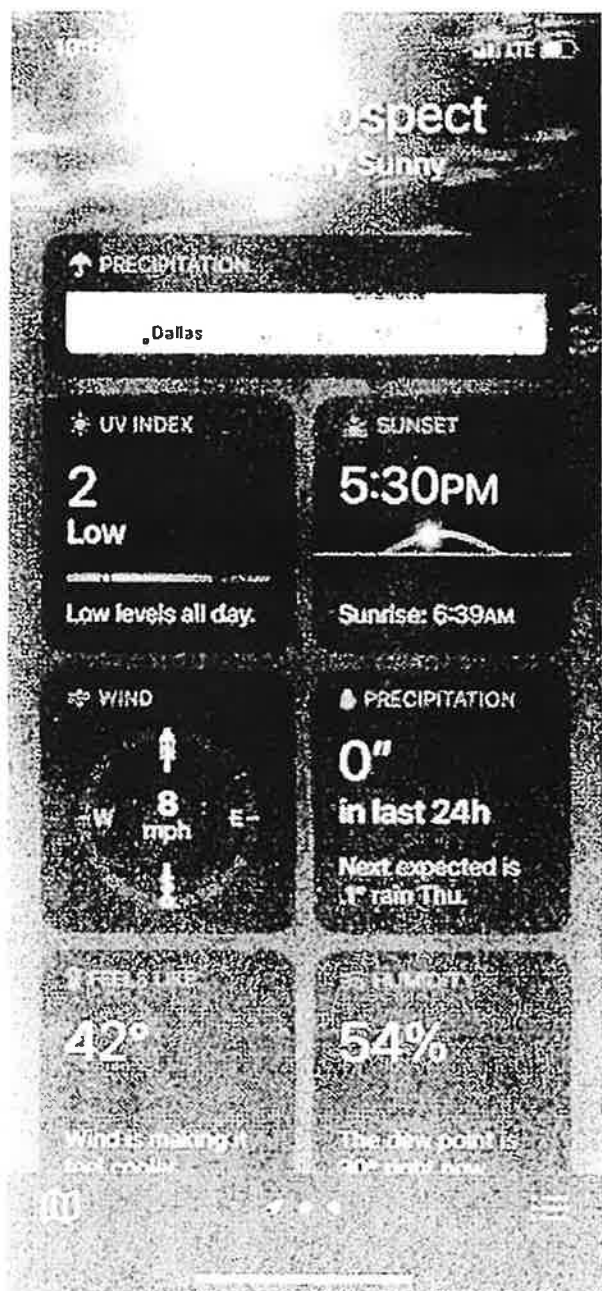

approximately 1030-1045am. Specifically it is 3 (on a 10 scale) on the outside the entrance of Mizken and Montessori School. It was more of 4-5 at alcoves near door entrances because it seems like the smell gets trapped by the wind. Both facilities are north of Prestige.

I went into Mizken and smelled Prestige product immediately upon entering their office (a 1 on a 10 scale). I noticed the Prestige smell more pronounced in their warehouse (a 2) and near their test kitchen. I walked their entire facility and smelled it in their office. The workers smelled it more significantly earlier.

The video is from the loading dock area of Mizken.

I went into Montessori School and smelled it immediately in their foyer. The employee said that the kids and teachers came in early from their recess.

The smell was worse by the playground; I would say a 4 on a 10 scale (more pungent).

Since the complaints started coming in about this time yesterday, I drove my usual route in MP and DP. I noticed a faint smell of Prestige product in Des Plaines (a 1 on a 10 scale). Then I crossed over Wolf to the business park and then the Prestige smell hit me (3 on a 10 scale). Then I drove the parking area around the building of the Montessori School and Mizken; the smell in the parking lot was very strong (4 on a 10 scale). It was particularly pungent by the loading dock of Mizken (that is directly north of Prestige). I called Mike Sobotta at Mizken right away and I asked if the smell was in his facility yet. Mike said no but Mike did smell the Prestige smell in the parking lot. I asked him to call my cell if he notes the Prestige smell in the building.

Wind is blowing towards the north/northwest. The smell patterns I noted match the wind direction.

Also, kind of an odd thing; as I was parked adjacent to the Prestige facility in the Mizken lot, I noticed a sprinkling of liquid (like a rain drizzle but it wasn't rain) which I did not note in other areas of the business park when I drove. I used my wipers and the droplets smeared.

I received a complaint from a resident that they smelled what they believe to be Prestige cheese at approximately 6:05pm. The complainant works in the area and smells Prestige regularly.

Just over a mile away from Prestige. Wind was blowing north/northeast at 11-12 mph. Fits into the complaint location.

Thanks

We are receiving a lot of complaints this morning. Park View Montessori called (Kathy English) and she said parents were complaining/upset with the smell. Also, children cannot go outside. I smelled it in their parking lot and Mizkens parking lot. I contact Mike at Mizken and he has not smelled it inside yet but did outside. I would say a 3-4 on a 10 scale.

I drove Des Plaines and smelled it on Dursey Lane in Long Meadow at the intersection of Wolf (1-2 on a 10 scale).

I drove further north in MP since the wind was pretty strong and I smelled it on Euclid (1-2 on a 10 scale). That is 4768 feet away from Prestige.

All complaints today are very vocal since the weather is getting warmer and people are going out.

Thanks

Another complainant came forward about Prestige. He would be willing to testify as a witness. Scott Beil at 224-465-4250 at 319 Marcella. Scott said it smelled absolutely horrible last night. He has smelled the Prestige product for awhile but last night was really bad.

I spoke Scott today and asked him to continue to report his concerns.

Allen; in case you need another witness.

Thanks

In the area about 535am; drove the usual route and nothing was smelled or heard. Came back to the village hall for a bit.

Went back out about 715am and drove the usual route. Prestige was operating. I noticed noise and smell at the parking lot of 350 N Wolf. Drove into Des Plaines and was blasted with a strong smell of Prestige product at the intersection of Wolf and Feehanville/Dursey in DP. Wind is blowing North/Northwest about 8-10 mph. Towards Mizken/Park View Montessori School.

I drove by Mizken and Park View Montessori School; there is a very strong/pungent smell of Prestige product in the parking lot of both businesses. (on a 10 scale, it was 4+ and pungent). Smell was so bad, I called Mike Sobotta to check in with him and he said that it didn't smell in his facility yet however he noticed in his entry alcove outside.

Brandon drove this morning too; he said it was rough smelling.

Thanks

Sorry the update is a bit late; here you go.

- 1) I arrived in the area about 535am and drove my usual route in MP and DP. No Prestige noises or smells noted. Back to hall about 555am.
- 2) I drove the usual route at about 800am and found Prestige operating. I noted Prestige product smell in the 350 N Wolf parking lot (about a 1-2 on 10 scale). Wind was blowing approximately 12-15 mph to the northeast. I smelled Prestige product in Des Plaines on Dursey Lane heading west to Feehanville in MP. Smell in Des Plaines was a solid cheesy 4+ (on a 10 scale); kind of cheese punch to the face. Nothing noted by Mizken. I drove to Kensington Road to the Walgreens parking lot and smelled Prestige product there (a 2 on a 10 scale). I drove through the business park and arrived at the hall about 845am.
- 3) At 912am, I received a complaint that Republic Services was picking up the dumpster at Prestige and they found leaking liquid which was presumed to be leaking discarded cheese product and most likely water or a cheese by product which was flowing onto the ground. SEE PICTURE – I will send to Lance and Allen to send to Prestige attorney.
- 4) At about 930am, we received a complaint from Sargan in Des Plaines. Sargan said it (Prestige) was horrible smelling today.
- 5) At about 1pm, on lunch I ran from MP to DP and through MP business park. Prestige was not operating however when I ran through the 350 N Wolf parking lot I smelled a lot of Prestige cheese product (a 2-3 on a 10 scal). It was kind of weird that it was not operating however I still smelled the Prestige Cheese product. No other smell in the business park. Back to hall about 2pm.
- 6) At 156pm, we received a complaint of Prestige smells and noises from a resident in MP. Resident left a message and I tried returning the message/voicemail was not set up yet.

In the area at 545am, looking as some lights. I waited until 630 to perform Prestige observations. Not as windy today- 2 mph heading east towards Des Plaines.

I drove the usual route in MP and DP. As soon as I turned off Lowden and crossed into Des Plaines I smelled Prestige product. The intensity was about a 1-2 on a 10 scale. I drove through Des Plaines and caught a smell of Prestige at about a 1 level. I went to the business park and Mizken area where I did not pick up any smells.

It appears they are starting later in the morning now.

Thanks

In the area at 430am. As I was driving east bound on Central near Albert/Rand I noted a Prestige cheese smell; a 1-2 on 10 scale. This is pretty unusual however I smelled Prestige this far west before. I continued my usual drive in MP and DP noting a light cheese smell on Lowden. I noted the wind is blowing towards the west at 7-8 mph. Driving along Des Plaines on Wolf Road I heard the whirling noise of the Prestige Cyclone.

Prestige was operating this morning. As I parked in Mizken's lot by Prestige, I noted that the Prestige conveyor belt was loaded with product going into the oven. As I was parked for a few minutes, workers observed me in my vehicle in the Mizken parking lot. One worker waved to me from the inside of Prestige. I did not wave back.

The smell was very strong outside of the ice rink on Lakeview Court. I would say a 4-5 on a 10 scale. I drove Feehanville and Business Drive smelling Prestige product along the way. I drove back to the Village Hall noting the cheese smell on Central again as I arrived at the Village Hall about 5am.

This week, it appears that there is more truck traffic at the Prestige facility; I do not know if pick or delivery or what. Also, I noted the delivery of more dumpsters at the rear of the building. The dumpsters are still in the drive aisle.

Thanks

Two visits already this morning

I arrived in the area at 510am. Drove my usual route in MP and DP. There was a lot of activity at Prestige this morning. The conveyor was not operating. No Prestige smells this morning. There was plenty of noise from the forklift and trucks. SEE ATTACHED VIDEO. Forklift being operated outside moving dumpsters.

Around 6am, Jason and I had to visit an unrelated lighting complaint. After the lighting complaint at about 630am, we drove the Prestige route again in MP and DP. Prestige started operating and the wind is blowing south/southwest at 9mph. We smelled Prestige on Central, Stevenson, Lowden (about a 1-2 on a 10 scale). Nothing in DP, by Mizken, or Parkview.

There is heavier truck traffic and it appears to be heavier production at the Prestige facility. Not sure what that means but I do see a difference with increased production and their truck traffic.

Thanks

Yesterday was a very busy day with complaints and observations of Prestige. Below is a complainant that states their daughter vomited because the smell was so strong.

Afternoon,

We received about 6 complaints this morning in regards to smells from Prestige. Below is the most serious one with the resident stating that his daughter vomited.

I arrived in the area at 530am. I drove the usual route in MP and DP; as I approached the entrance of the parking lot of 350 N Wolf, I smelled cheese at a level 1 out of 10. As I drove closer to the rear of the Prestige while still in the parking lot 350 N Wolf, I smelled a very significant smell of Prestige cheese product however they were not operating. The rear overhead delivery door of Prestige was open and the air was permeated with cheese smell in the parking lot of 350 N Wolf. I would say a 5 out of 10 level. I saw 3 workers outside servicing the exterior silo and while I was in the Mizken parking lot, I observed through the windows of Prestige employees servicing the equipment.

I finished my observation route and went back to the Village Hall at approximately 555am.

Thanks

Arrived in the area about 525am, drove my usual route in MP and DP. At the intersection of Rand and Central, I smelled Prestige product right before the intersection heading east. It was a 1-2 on a 10 scale. Once I was past LA Fitness, the smell ceased. I drove behind 350 N Wolfe and Mizken and determined Prestige was not operating at that time. When at Mizken, I noticed there was not as many cars at Prestige (i.e. workers) and it appeared that the employees inside were wiping some equipment down and moving some items via forklift.

I conclude my observations at about 550am and went back to the Village Hall. I smelled Prestige product at the corner of Central and Emerson when heading back to the hall.

Thanks

Arrived in the area at 550am, drove the usual route in MP and DP, no smells or sounds. Prestige was not operating. There are a lot of vehicles in the parking lot at Prestige. Seems a bit more parked cars than a usual shift. No semis picking up product or staged. Went back to hall at about 615am.

We picked up signs at the hall and coffee'd up, then I went out to a construction site and then drove the usual route again in MP and DP at 725am. Prestige was still not operating. Back to hall about 8am.

Thanks

Arrived in the area at 530am. Drove the usual route in MP and DP. Defiantly some skunks out this morning. I noticed that there are more dumpsters located in the back of Prestige. They have 4 dumpsters and a large roll off from Republic.

I did not notice Prestige running at that time. I did not see their production line/conveyor running. I did hear a faint pounding of metal inside the building while I was in the parking lot of 350 N Wolf and Mizken.

Thanks

I arrived in the area around 515am. I drove the usual areas in MP and DP. There were employees at Prestige, one was observed in a dumpster jumping up and down to flatten the contents down. I did not observe Prestige running.

I concur with Brandon, some machinery is missing off the top of the building. I believe the removed equipment was installed when the 1st and 2nd attempts at installing the Byers equipment was installed to attempt to mitigate the smell discharge. Interesting that the equipment was removed...

Thanks

Exhibit 3

Date	Complaint Date/Time or Meeting Date	Olfactory Assessment (1-10 Least to Worst)	Location	
12/20/2023	12/20/2023 at 5:45 AM - WMS visited facility and sent the following email, "Starting about 5:10am, I drove Wolf Road this morning between Kensington and Central; I did not smell or hear Prestige. I stopped in the office about 5:25 and went back out. I drove my usual route around MP neighborhoods (i.e. Lowden) and did not smell or hear anything. I drove to Des Plaines across the street and did not smell any cheese product. I did faintly hear what I believe to be the Prestige cyclone working. I drove Des Plaines neighborhood pretty extensively and I did not smell anything. SEE 1ST VIDEO FROM DES PLAINES VISIT THIS MORNING I drove north on Wolf and turned west bound down Feehanville and noticed the smell of cheese right away in front of the Montessori school. I drove (with my headlights off) into the parking lot between Mizken and Prestige parking in the Mizken loading area. At 5:45 I witnessed Prestige factory workers inside through the Prestige windows walk around and I saw product on the conveyor belt moving into the machine (see video). I took a few more pictures and my camera flashed. A few of the factory workers witnessed my flash on the camera and I can see them rushing to the back of the building wall inside and shut down the Prestige cyclone machine stopping operation. I did not drive onto 431 Lakeview Property at all today. SEE 2nd VIDEO FROM MIZKEN PARKING LOT VISIT THIS MORNING Stas the attorney said that they were only operating to 5:00am. Prestige operated outside of the hours they told us; see below. SEE PICTURE OF TIME STAMP	0		
12/28/2023	12/28/2023 at 5:15 AM - WMS sent the follwing email, "I arrived in town today about 5:15 and drove my usual route a few times. On Lowden in Mount Prospect, I noted a heavier smell of cheese in the neighborhood. On a scale of 1-10 (10 is worst), it was a 3-4 on Lowden. The cheese smell stopped as I drove across Wolf quite literally in the middle of the road. I drove multiple neighborhoods in Des Plaines and did not smell anything there. No smell was noted in the business park, 350 N Wolf or by Mizken either. Prestige was confirmed operating this morning. It was a bit unusual to smell the Prestige product on Lowden so I checked the wind and speed this morning. The wind is blowing straight south at the time and at 9 mph. The other days of my observations generally the wind was blowing towards the northeast-north at varying 5-12 mph. I made it back to the Village Hall about 5:56am.	4	Lowden Lane MP	
12/29/2023	12/29/2023 at 5:10 AM - WMS sent the following email, "I arrived in the area about 5:10 and toured the usual roads in Mount Prospect and Des Plaines. There was a steady rain this morning. I did not notice any smell or noise anywhere. I drove past Prestige and it appeared that they were not working. I concluded my observations about 5:40."	0		
1/3/2024	01/03/2024 at 5:15 AM - WMS sent the following email, "Arrived in the area about 5:15am. I drove my usual route a few times through MP and Des Plaines, no Prestige smell or noise. Drove by Prestige facility and it was dark with no apparent operation or noise. Concluded driving area about 5:50am. Chief Eterno; please see highlighted email below showing hours for Prestige's operation schedule this week.	0		
1/4/2024	01/04/2024 at 5:05 AM - WMS sent the following email, "Arrived in the area about 5:05am, drove my usual route. On Lowden I noticed a faint smell of Prestige product (i.e. cheese). On a scale of 1-10, I would say a 1; very light smell. I drove into Des Plaines and heard a faint clicking/light pounding noise. Then I went to the Business Park. Then I drove over to 350 N Wolf and noticed a very faint Prestige smell on the south side of the building (scale of 1) and then drove to the back of the building that faces Prestige (west side). I took the attached video (time stamp of 5:24am) of workers pounding on the bottom of one of the silos in the back. That is most likely what I heard clicking in Des Plaines. It was pretty load at 350 N Wolf building. I drove around the 431 Lakeview and noted two workers pounding on something on the silo. I did not stop and kept going.	1	Lowden Lane MP	

1/4/2024	01/04/2024 at 2:30 PM - WMS sent the following email. "We received a couple of complaints late this morning about the smell of cheese from Prestige. Both Brandon and I followed up at the site this afternoon and drove the usual paths. We detected a faint smell of Prestige product in the 350 N Wolf property parking lot. I went into Des Plaines and drove the area fairly extensively and smelled no Prestige product. If you want a comparison on the 1-10 scale for this afternoon. It would barely be a 1 rating with a very short longevity like less than 1-2 minutes.	1	350 N. Wolf Rd. MP	
1/5/2024	01/05/2024 at 4:50 AM - WMS sent the following email, "Arrived in the area about 4:50. Proceeded to drive my normal route in Mount Prospect and Des Plaines. I noticed very faint smell of Prestige product in the business park and in Mizken's parking lot (scale 1 on a 1-10). The production was not running, it looked like they were sweeping up inside. Concluded tour and back to hall about 5:25am. We will perform observations later this morning too."	1	1601 Feehanville Dr. MP	
1/5/2024	01/05/2024 at 9:45 AM - WMS and Brandon drove around the business park and subdivisions. Smell of around a 1-2 rating noted at the Mizkan Testing facility. No smell noted at residential areas.	2	1601 Feehanville Dr. MP	
1/8/2024	01/08/2024 at 5:20 AM - WMS sent the following email, "Arrived in the area about 5:20 am this morning. I drove my normal route in MP and DP. No Prestige product smell or noises were observed this morning. Left the area about 5:45am."	0		
1/9/2024	01/09/2024 at 5:15 AM - WMS sent the following email, "Arrived in the area about 5:15am. Drove my usual route in MP and DP; no Prestige smell or noise observed. Since it was snowing and a bit unusual weather, I double backed and went through usual route again. No Prestige smell or noise observed. The lights were on at Prestige and cars were in the parking lot. Concluded observations about 5:45am."	0		
1/10/2024	01/10/2024 at 5:59 AM - WMS sent the following email - I arrived in the area about 5:05am. Drove my usual route through MP and DP. I noticed a smell of Prestige product in the parking lot located at 350 N Wolf. On a scale of 1-10 it was a 1-2. The smell did not travel to Wolf; it was fairly concentrated in the parking lot. I double backed through the business park and Mizken; I found no additional smell or noise from Prestige. I drove back south to Central and performed some additional code enforcement on a separate truck parking complaint off of Centennial that we received. I found no additional Prestige smells after doubling back through MP. "	2	350 N. Wolf Rd. MP	
1/10/2024	01/10/2024 at 9:49 AM - WMS sent the following email, "This morning, we have received a total of 3 additional residents and a Mizken complaints about the Prestige operation. I drove my usual route and to the two addresses of complainants in DP. I observed Prestige smell at the two locations in DP. On a scale of 1-10, it was 4 in Des Plaines and consistent through the entire neighborhood in Longford Glen. I smelled a little in Kylemore (Scale 2 out of 10). I went to Mizken and smelled Prestige product (Scale 3 out of 10). We will continue to monitor today.	4	Longford Glen DP	
1/10/2024	01/10/2024 at 1:28 PM - WMS sent the following email, "Hello, we have been patrolling the same Mount Prospect and Des Plaines areas to observe for Prestige product smell and noise today. 1) Between 9:30 and 10:30am today, we noted significant smells in Des Plaines (5 on a 1-10 scale). Also a 3-4 on the scale at 350 N Wolf. 2) Between 11:30am and 1:00pm, we noted significant smell at the Mizken tower (3-4 on a 1-10 scale). Also a 1-2 on the scale at 350 N Wolf. 3) Workers opened the silo bottom and were working at the bottom about 1:10pm. When I was at 350 N Wolf, the wind picked up and blew the smell towards me in my vehicle-wow, that was a nasty smell, like rancid smell. The machines were not operating; it looked like it was being serviced. Also, I received a call from Kevin @ Cook County. I left a message for Kevin and will update him on the status. As you can hear from the message, as of recently, they (Cook County) has not identified any odor issues. They even worked last weekend to observe. Interesting.	5	DP	
1/11/2024	01/11/2024 at 9:45 AM - WMS sent the following email, "About 9:45am, I witnessed two Mostardi Platt trucks at the Prestige facility. Prestige was not running and it appeared that there were technicians onsite. Drove the usual route in MP and DP, no smells or noise noted."	0		
1/12/2024	01/12/2024 at 5:15 AM - WMS sent the following email, "Arrived in the area about 5:15am, toured my usual route in MP and DP. No Prestige smell or noise noted. There were not as many vehicles in the lot of Prestige as normal. Snow was coming down a lot heavier; lights were still on though. I drove the area behind Lowden again and went by Westgate area for some other code enforcement activity. Back at the hall about 5:55am"	0		

1/15/2024	01/15/2024 at 5:15 AM - WMS sent the following email, "Arrived in the area at about 5:15am, toured my usual route. Temps were -13 actual and -35 wind chill. Dang, its cold. No Prestige smell or noise observed. I double backed through the same area and noticed nothing. I parked at Mizken in their parking lot which is adjacent to Prestige. I observed Prestige through their windows (like a fish bowl with the lights on). Employees were inside and appeared to be loading product into the hopper. I believe it was the bags of soy product which is added to the cheese to make the Prestige feed product. Back at the hall at about 5:55am. We will make additional observations this morning since I saw them loading supplies."	0		
1/15/2024	01/15/2024 at 12:30 PM - WMS sent the following email, "I was running a 5 mile route yesterday about 12:30pm in MP and was just south of Kensington on Elmhurst Avenue (by McDonalds and the medical building) when I caught a smell of Prestige product. I stopped to adjust my face mask and scrape the ice off my glasses, then I caught the smell (1-2 on a 10 scale)."	2	Kensington and Elmhurst MP	
1/16/2024	01/16/2024 at 5:05 AM - WMS sent the following email, "Arrived in the area about 5:05am. I drove the usual areas both in MP and DP. I did not smell any Prestige product. When I drove behind 350 N Wolf, there were two workers outside under the silos and the workers appeared to be using an impact tool on a fastener of some type. Picture metal on metal sound drilling; probable not the best time to do this in the morning to work. They saw me observing them and stop using the tool. I proceeded to drive the business park and then to Mizken. The workers were back under the silo working on the something. I drove everything again and came back to the Village Hall about 5:45am."	0		
1/19/2024	01/19/2024 at 5:20 AM - WMS sent the following email, "Arrived in the area at 5:20am. Drove my usual route in MP and DP. I did not notice any Prestige product smell or noise. When I drove to Mizken, the lights inside Prestige were on and staff were inside. I observed 5 staff members standing inside and all looking at the conveyor belt. It did not look like Prestige was running. Got back to the hall about 5:55am."	0		
1/22/2024	01/22/2024 at 5:15 AM - WMS sent the following email, "Arrived in the area around 515am. Drove my usual route in MP and DP. No smell or noise observed along the usual route. Prestige employees are inside the facility. I saw them standing around the machinery when I was parked at Mizken. Arrived back the hall around 550am."	0		
1/23/2024	01/23/2024 at 5:35 AM - WMS sent the following email, "Arrived in the area about 535am. Drove the usual route in MP and DP. I noted no Prestige smells or noise. Arrived at the hall about 555am. Roads were rough. Mount Prospect roads were in better condition than Des Plaines"	0		
1/24/2024	01/24/2024 at 5:30 AM - WMS sent the following email, "Arrived in the area at 530am yesterday. Drove my usual route. No noise or smells noted. Went back to the Village Hall for a bit. Then left the hall early before going to the State of the Village. I drove usual areas again in MP and DP. Prestige was operating however I noted to no Prestige smells. I did notice noise from the Prestige machinery. I attached a video that I took at 651am from the parking lot of 350 N Wolf. I concluded my observations and then drove to Old Orchard for the breakfast meeting."	0		
1/25/2024	01/25/2024 at 5:20 AM - WMS sent the following email, "Arrived in the area about 520am. Drove my usual route in MP and DP. No noise or smells were noted this morning. While I was parking in the Mizken parking lot, I noticed multiple employees inside Prestige moving product around with a fork lift. Concluded observations and back at hall about 550am."	0		
2/1/2024	02/01/2024 at 2:13 PM - WMS sent the following email, "This morning we received a total of 6 Prestige smell complaints from their operation. Brandon verified the smell and it is intermittent. Brandon noted it was a 3-4 (out of 10) southeast of the Prestige facility. We received another anonymous complaint this afternoon. At lunch this afternoon, I ran my usual route that I usually drive through MP and DP. I noted Prestige product smell south of the Prestige facility along Lowden and it was a 3-4 (out of 10). I then ran to Des Plaines and noted a light Prestige smell of a 1 (out of 10) in Longford Glen. I then ran to Mizken and noted a 1 (out of 10) in their parking lot. I then ran to the village hall. No other smells or noises noted. It didn't look like they were operating at the time I noted the smells; it was residual Prestige smell."	4	Lowden Lane MP	

2/2/2024	02/02/24 at 5:05 AM - WMS sent the following email, "Arrived in the area about 5:05am, drove my usual route through MP and DP. Prestige was not operating however they were working on equipment inside the facility. I observed the workers through the windows when I was in Mizken’s lot. When I was in the Mizken lot, I picked up a slight Prestige odor, about a 1 (on a 10 scale). It was most likely residual because I did not notice any Prestige smells anywhere else. Concluded my observations about 5:35 then did some other code enforcement on some truck parking at a house unrelated to Prestige."	1	1601 Feehanville Dr. MP	
2/2/2024	02/02/24 at 9:50 AM - WMS sent the following email, "We received a couple of complaints about cheese smell from the Stratford and Lowden area this morning. Both Brandon and I performed observations and confirmed the smell at that intersection. I would classify it as 4 (out of 10) at the Stratford and Lowden area. The wind is blowing southwest and we smelled Prestige product along Central Road, it was the strongest west of Rand and Central. I would it wavered between a 1-2 (on a 10 scale). We tracked the smell south of Central down Owen and as far south as St. Paul Church which is off Busse. Additional staff smelled Prestige product around Village Hall (maybe a 1 on a 10 scale). Vary faint here. I measured the distance via aerial google and the distance we can smell the Prestige product is a mile."	2	Rand and Central MP	
2/5/2024	02/05/2024 at 5:05 AM - WMS sent the following email, "Arrived in the area at about 5:05am. Drove the usual route through MP and DP. Prestige was not operating. The employees were inside the facility. No smells or noise noted."	0		
2/6/2024	02/06/2024 - WMS sent the following email, "After the meeting last night, the Chief let me know that they received a call for service about a noise complaint at Prestige Feed. Since I was still in town, I drove my usual route through MP and DP. I noticed a slight smell of Prestige product in DP, maybe a 1 (on 1-10 scale). I did not notice the noise that they alleged in DP. When I drove to 350 N Wolf, I noticed noise being produced by Prestige. See attached video from last night."	1	DP	
2/14/2024	02/14/2024 at 5:40 AM - WMS sent the following email, "Drove my usual route in MP and DP this morning at 540am. No smells or noise noted from Prestige. Back to hall about 6am. Drove my usual route in MP and DP this morning at 645am. Wind is blowing towards the north/northeast. I noted Prestige product smell in DP at a 1-2 (on a 1-10 scale) right at the border by Long Meadow subdivision entrance. I drove across into MP again and then through the business park. I noted Prestige product smell at a 1-2 in Mizken’s parking lot. Concluded observations at about 7am and then purchased some donuts at Joe Donut for staff."	2	1601 Feehanville Dr. MP	
2/16/2024	02/16/2024 at 5:15 AM - WMS sent the following email, "Arrived in the area at 515am. Drove the usual route in MP and DP. It appeared that Prestige was not operating. When I arrived in Mizken’s parking lot, the lights were on inside Prestige and the machines were not operating. Through the windows, I saw a staff member making coffee in their break room. After doing some additional code enforcement on another property, I arrived at the VH about 550am."	0		
2/19/2024	02/19/2024 at 5:20 AM - WMS sent the following email, "Good morning; arrived in the area about 520am. Drove my usual route in MP and DP. Prestige was running this morning. I did notice a rancid/nasty smell in the Lowden neighborhood. It was a 1-3 (on a scale of 10) in the Lowden neighborhood in MP. It looks like wind is blowing west/north west. I noticed the rancid/nasty smell in the Mizken parking lot at about 1-2. I returned to drive through DP and MP again; the smell was still there. Arrived back at the hall about 550am."	3	Lowden Lane MP	
2/20/2024	02/20/2024 at 5:15 AM - WMS sent the following email, "Arrived in the area about 515am. Drove the usual route in MP and DP. Did not notice any Prestige smells or noises. Back to the hall about 545am. "	0		

2/20/2024	02/20/2024 at 11:41 AM - WMS sent the following email, "The Village received complaints from both Mizken and Montessori School in the Business Park. 20 minutes after receiving the complaints, we went and performed our normal observations both in MP and DP. I did notice Prestige smell at both facilities this morning at approximately 1030-1045am. Specifically it is 3 (on a 10 scale) on the outside the entrance of Mizken and Montessori School. It was more of 4-5 at alcoves near door entrances because it seems like the smell gets trapped by the wind. Both facilities are north of Prestige. I went into Mizken and smelled Prestige product immediately upon entering their office (a 1 on a 10 scale). I noticed the Prestige smell more pronounced in their warehouse (a 2) and near their test kitchen. I walked their entire facility and smelled it in their office. The workers smelled it more significantly earlier. The video is from the loading dock area of Mizken. I went into Montessori School and smelled it immediately in their foyer. The employee said that the kids and teachers came in early from their recess. The smell was worse by the playground; I would say a 4 on a 10 scale (more pungent).	5	1601 Feehanville Dr. MP	
2/21/2024	02/21/2024 at 8:55 AM - WMS sent the following email, Since the complaints started coming in about this time yesterday, I drove my usual route in MP and DP. I noticed a faint smell of Prestige product in Des Plaines (a 1 on a 10 scale). Then I crossed over Wolf to the business park and then the Prestige smell hit me (3 on a 10 scale). Then I drove the parking area around the building of the Montessori School and Mizken; the smell in the parking lot was very strong (4 on a 10 scale). It was particularly pungent by the loading dock of Mizken (that is directly north of Prestige). I called Mike Sobotta at Mizken right away and I asked if the smell was in his facility yet. Mike said no but Mike did smell the Prestige smell in the parking lot. I asked him to call my cell if he notes the Prestige smell in the building. Wind is blowing towards the north/northwest. The smell patterns I noted match the wind direction. Also, kind of an odd thing; as I was parked adjacent to the Prestige facility in the Mizken lot, I noticed a sprinkling of liquid (like a rain drizzle but it wasn't rain) which I did not note in other areas of the business park when I drove. I used my wipers and the droplets smeared."	4	1601 Feehanville Dr. MP	
2/22/2024	02/22/2024 at 5:12 AM - WMS sent the following email, Arrived in the area at about 525am. Drove the usual route through MP and DP. Prestige was not operating however there were a lot of vehicles in the lot. There is also a large dumpster that appeared behind the building in the drive aisle. The large dumpster is an addition to their normal refuse. When I was at 350 N Wolf, there was a significant aroma of Prestige product wafting into the parking lot of 350. Concluded about 555am. The wind is blowing in a south direction today...	0		
2/23/2024	02/23/2024 at 5:20 AM - WMS sent the following email, "Arrived in the area about 520am. Drove in MP and DP; Prestige appeared to be working inside as I heard a drill/impact tool from the 350 N Wolf parking lot. A slight lingering Prestige smell was hovering in a few spots in the 350 N Wolf parking lot. No other notable observations. The dumpster (like a 30 yard) was in the back of the building parking area at Prestige. I checked with PW who checked with Republic; the route driver mentioned that sometimes powder and other by-products are picked up. PW will let me know what the dumpster contains next time it is picked up. The dumpster sitting in the parking lot drive aisle is not regular in my opinion; kind of unusual. Back to the hall by 550am'ish. "	0		

2/26/2024	02/26/2024 at 7:15 AM - WMS sent the following email, "Drove my usual route in MP and DP around 715-735am today. Prestige was operating. I did not notice any Prestige product smells in the area. I called Mike Sobotta at Mizken to check in with him; Mike did not notice any smells in his facility. I advised Mike to let me know if he notes any smells or issues."	0		
2/27/2024	02/27/2024 at 11:53 AM - WMS sent the following email, "We are receiving a lot of complaints this morning. Park View Montessori called (Kathy English) and she said parents were complaining/upset with the smell. Also, children cannot go outside. I smelled it in their parking lot and Mizkens parking lot. I contact Mike at Mizken and he has not smelled it inside yet but did outside. I would say a 3-4 on a 10 scale. I drove Des Plaines and smelled it on Dursey Lane in Long Meadow at the intersection of Wolf (1-2 on a 10 scale). I drove further north in MP since the wind was pretty strong and I smelled it on Euclid (1-2 on a 10 scale). That is 4768 feet away from Prestige. All complaints today are very vocal since the weather is getting warmer and people are going out."	4	1601 Feehanville Dr. MP	
3/4/2024	03/04/2024 at 5:20 AM - WMS sent the following email, "Arrived in the area at 520am this morning. Drove my usual route in MP and DP. There was a lot of humidity and fog in the area this morning. No Prestige smells noted this morning. I did note that the Prestige workers must have been using a hammer/impact drill of some sort on machinery inside; I noted a echoing of a drill near or by metallic equipment. I was parked in the 350 N Wolf parking lot adjacent to Prestige. This sound is an sound irritant and is a nuisance to the neighborhood. Arrived back at the hall about 550am."	0		
3/7/2024	03/07/2024 at 9:02 AM - WMS sent the following email, "I received an anonymous complaint from a resident that they smelled Prestige in the business park on the way to work. The usual trend is for Prestige to start to operate later in the morning (i.e. 7-7:30) ish. I left from village hall and drove my usual route in MP and DP starting about 8:15am this morning. Please note wind direction below. I found Prestige operating this morning and immediately noticed the Prestige product smell in Lakeview Court and in the Nicholas Ice Rink parking lot. I proceeded to drive Feehanville Drive and noted Prestige product/cheese smell the length of Feehanville to Business Center Drive where it ceased. The level was a very cheesy 2-3 on a 10 scale. The cheese smell followed the direction of the wind. I did notice that the windsock was removed off the top of Prestige. I thought they were monitoring the wind patterns and other weather conditions..."	3	Business Center Drive MP	
3/11/2024	03/11/2024 at 5:35 AM - WMS sent the following email, "In the area about 535am; drove the usual route and nothing was smelled or heard. Came back to the village hall for a bit. Went back out about 715am and drove the usual route. Prestige was operating. I noticed noise and smell at the parking lot of 350 N Wolf. Drove into Des Plaines and was blasted with a strong smell of Prestige product at the intersection of Wolf and Feehanville/Dursey in DP. Wind is blowing North/Northwest about 8-10 mph. Towards Mizken/Park View Montessori School. I drove by Mizken and Park View Montessori School; there is a very strong/pungent smell of Prestige product in the parking lot of both businesses. (on a 10 scale, it was 4+ and pungent). Smell was so bad, I called Mike Sobotta to check in with him and he said that it didn't smell in his facility yet however he noticed in his entry alcove outside. Brandon drove this morning too; he said it was rough smelling."	4	1601 Feehanville Dr. MP	

3/12/2024	03/12/2024 at 5:35 AM - WMS sent the following email, "Sorry the update is a bit late; here you go. 1) I arrived in the area about 535am and drove my usual route in MP and DP. No Prestige noises or smells noted. Back to hall about 555am. 2) I drove the usual route at about 800am and found Prestige operating. I noted Prestige product smell in the 350 N Wolf parking lot (about a 1-2 on 10 scale). Wind was blowing approximately 12-15 mph to the northeast. I smelled Prestige product in Des Plaines on Dursey Lane heading west to Feehanville in MP. Smell in Des Plaines was a solid cheesy 4+ (on a 10 scale); kind of cheese punch to the face. Nothing noted by Mizken. I drove to Kensington Road to the Walgreens parking lot and smelled Prestige product there (a 2 on a 10 scale). I drove through the business park and arrived at the hall about 845am. 3) At 912am, I received a complaint that Republic Services was picking up the dumpster at Prestige and they found leaking liquid which was presumed to be leaking discarded cheese product and most likely water or a cheese by product which was flowing onto the ground. SEE PICTURE – I will send to Lance and Allen to send to Prestige attorney. 4) At about 930am, we received a complaint from Sargan in Des Plaines. Sargan said it (Prestige) was horrible smelling today. 5) At about 1pm, on lunch I ran from MP to DP and through MP business park. Prestige was not operating however when I ran through the 350 N Wolf parking lot I smelled a lot of Prestige cheese product (a 2-3 on a 10 scal). It was kind of weird that it was not operating however I still smelled the Prestige Cheese product. No other smell in the business park. Back to hall about 2pm. 6) At 156pm, we received a complaint of Prestige smells and noises from a resident in MP. Resident left a message and I tried returning the message/voicemail was not set up yet."	4	Dursey Lane DP	
3/13/2024	03/13/2024 at 5:45 AM - WMS sent the following email, "In the area at 545am, looking as some lights. I waited until 630 to perform Prestige observations. Not as windy today- 2 mph heading east towards Des Plaines. I drove the usual route in MP and DP. As soon as I turned off Lowden and crossed into Des Plaines I smelled Prestige product. The intensity was about a 1-2 on a 10 scale. I drove through Des Plaines and caught a smell of Prestige at about a 1 level. I went to the business park and Mizken area where I did not pick up any smells. It appears they are starting later in the morning now."	2	DP	
3/14/2024	03/14/2024 at 3:45 AM - WMS sent the following email, "In the area at 430am. As I was driving east bound on Central near Albert/Rand I noted a Prestige cheese smell; a 1-2 on 10 scale. This is pretty unusual however I smelled Prestige this far west before. I continued my usual drive in MP and DP noting a light cheese smell on Lowden. I noted the wind is blowing towards the west at 7-8 mph. Driving along Des Plaines on Wolf Road I heard the whirling noise of the Prestige Cyclone. Prestige was operating this morning. As I parked in Mizken’s lot by Prestige, I noted that the Prestige conveyor belt was loaded with product going into the oven. As I was parked for a few minutes, workers observed me in my vehicle in the Mizken parking lot. One worker waved to me from the inside of Prestige. I did not wave back. The smell was very strong outside of the ice rink on Lakeview Court. I would say a 4-5 on a 10 scale. I drove Feehanville and Business Drive smelling Prestige product along the way. I drove back to the Village Hall noting the cheese smell on Central again as I arrived at the Village Hall about 5am. This week, it appears that there is more truck traffic at the Prestige facility; I do not know if pick or delivery or what Also, I noted the delivery of more dumpsters at the rear of the building. The dumpsters are still in the drive aisle."	5	Lakeview Court MP	

3/15/2024	03/15/2024 at 5:10 AM - WMS sent the following email, "Two visits already this morning I arrived in the area at 510am. Drove my usual route in MP and DP. There was a lot of activity at Prestige this morning. The conveyor was not operating. No Prestige smells this morning. There was plenty of noise from the forklift and trucks. SEE ATTACHED VIDEO. Forklift being operated outside moving dumpsters. Around 6am, Jason and I had to visit an unrelated lighting complaint. After the lighting complaint at about 630am, we drove the Prestige route again in MP and DP. Prestige started operating and the wind is blowing south/southwest at 9mph. We smelled Prestige on Central, Stevenson, Lowden (about a 1-2 on a 10 scale). Nothing in DP, by Mizken, or Parkview. There is heavier truck traffic and it appears to be heavier production at the Prestige facility. Not sure what that means but I do see a difference with increased production and their truck traffic."	2	Stevenson and Lowden MP	
3/18/2024	03/18/2024 at 5:30 AM - WMS sent the following email, "I arrived in the area at 530am. I drove the usual route in MP and DP; as I approached the entrance of the parking lot of 350 N Wolf, I smelled cheese at a level 1 out of 10. As I drove closer to the rear of the Prestige while still in the parking lot 350 N Wolf, I smelled a very significant smell of Prestige cheese product however they were not operating. The rear overhead delivery door of Prestige was open and the air was permeated with cheese smell in the parking lot of 350 N Wolf. I would say a 5 out of 10 level. I saw 3 workers outside servicing the exterior silo and while I was in the Mizken parking lot, I observed through the windows of Prestige employees servicing the equipment. I finished my observation route and went back to the Village Hall at approximately 555am."	5	350 N. Wolf Rd. MP	
3/19/2024	03/19/2024 at 5:25 AM - WMS sent the following email, "Arrived in the area about 525am, drove my usual route in MP and DP. At the intersection of Rand and Central, I smelled Prestige product right before the intersection heading east. It was a 1-2 on a 10 scale. Once I was past LA Fitness, the smell ceased. I drove behind 350 N Wolfe and Mizken and determined Prestige was not operating at that time. When at Mizken, I noticed there was not as many cars at Prestige (i.e. workers) and it appeared that the employees inside were wiping some equipment down and moving some items via forklift. I conclude my observations at about 550am and went back to the Village Hall. I smelled Prestige product at the corner of Central and Emerson when heading back to the hall.	2	Rand and Central MP	
3/20/2024	03/20/2024 at 5:50 AM - WMS sent the following email, "Arrived in the area at 550am, drove the usual route in MP and DP, no smells or sounds. Prestige was not operating. There are a lot of vehicles in the parking lot at Prestige. Seems a bit more parked cars than a usual shift. No semis picking up product or staged. Went back to hall at about 615am. We picked up signs at the hall and coffee'd up, then I went out to a construction site and then drove the usual route again in MP and DP at 725am. Prestige was still not operating. Back to hall about 8am."	0		
3/21/2024	03/21/2024 at 5:30 AM - WMS sent the following emai, "Arrived in the area at 530am. Drove the usual route in MP and DP. Defiantly some skunks out this morning. I noticed that there are more dumpsters located in the back of Prestige. They have 4 dumpsters and a large roll off from Republic. I did not notice Prestige running at that time. I did not see their production line/conveyor running. I did hear a faint pounding of metal inside the building while I was in the parking lot of 350 N Wolf and Mizken."	0		
4/1/2024	04/01/2024 at 5:15 AM - WMS sent the following email, "I arrived in the area around 515am. I drove the usual areas in MP and DP. There were employees at Prestige, one was observed in a dumpster jumping up and down to flatten the contents down. I did not observe Prestige running. I concur with Brandon, some machinery is missing off the top of the building. I believe the removed equipment was installed when the 1st and 2nd attempts at installing the Byers equipment was installed to attempt to mitigate the smell discharge. Interesting that the equipment was removed...	0		

4/2/2024	04/02/2024 at 2:44 PM - WMS sent the following email, "I was not intending on visiting or performing Prestige observations today however at lunch I went for a run and started heading north in MP. I picked up a cheesy Prestige smell at Busse Park (1.12 miles away) which is indicated on the map below. It was a 4 on a 10 scale. I changed my route to run to Prestige and Des Plaines. I ran to Prestige and heard them operating while I was running on Feehanville. It seemed louder today for some reason. I arrived to the Mizken parking lot and found Prestige operating. It was 12:30pm. Super odd thing; there were two vehicles with one person in each vehicle that were parked near Prestige and when I ran past the two vehicles I stopped in the 350 N Wolf Road parking lot. I proceeded to start taking video of Prestige running and then Prestige immediately shut down. Fairly odd coincidence that when I ran by and starting photographing, they shut down the factory... I proceeded to run in Des Plaines then to Lowden in MP (960 feet away) where I immediately smelled cheese/kind of rancid smell. It was 4 on a 10 scale. Then I ran on Central (4760 feet away) and smelled cheese product again. I ran back to the Village Hall and concluded by observations and run.	4	Lowden Lane MP	
4/8/2024	04/08/2024 at 5:30 AM - WMS sent the following email, "Arrived in the area at 530am. Drove my usual route in MP and DP. I did not hear or see Prestige operating however they must have operated recently because when I drove into the Mizken parking lot, there was a pungent smell of Prestige product (like a 4-5 on a 10 scale) hovering in the Mizken parking lot and loading dock area. It actually smelled rancid this morning. I checked the wind and it is blowing 8mph north towards Mizken/Park View Montessori; so a straight direction from Prestige."	5	1601 Feehanville Dr. MP	
4/9/2024	04/09/2024 at 5:35 AM - WMS sent the following email, "In the area at 535am, drove the usual route in MP and DP. I caught a smell of Prestige on Lowden in MP. It was a 1 on a 10 scale. Drove in DP and caught a strong smell of Prestige product deeper back in the Longford Glen subdivision this time. It was a 3 on a 10 scale. I drove to the intersection of Feehanville and Wolf in DP; the Prestige smell was a 3-4 on the 10 scale. At Mizken, the smell was a 1-2 in the parking lot and loading dock area. The Prestige smell was very pronounced in DP this morning, so I doubled back through DP and the smell was still strong. I attached a video of cheese being processed on the conveyor belt at Prestige. I observed that conveyor belt from Mizken's parking lot. Wind is blowing 8-10 mph east/northeast today. I anticipate more complaints coming into today."	4	Feehanville and Wolf MP	
4/11/2024	04/11/2024 at 7:30 AM - WMS sent the following email, "I drove the usual area at around 730am. I started at the Village Hall and drove to the light at Rand and Central. My windows were open and immediately noticed a Prestige cheese smell as I neared the intersection and stopped at the light. The Prestige cheese smell was 3 on a 10 scale. As I drove through the intersection past the LA Fitness, the smell dissipated. I drove my usual route through MP and DP. I verified that Prestige was operating by sound and smell. I found the smell nearly a one mile away. The smell location/direction matches the wind direction.	3	Rand and Central MP	
4/15/2024	04/15/2024 at 5:20 AM - WMS sent the following email, "I arrived in the area at 520am, drove my usual route in MP and DP. It appears that Prestige was not operating. I did not smell any Prestige product. When I toured the Mizken parking lot, I noticed there were 7 cars in the Prestige lot and that maintenance was being performed inside the facility. I doubled back through the area and arrived at the hall around 555am after doing some light code enforcement.	0		
4/18/2024	04/18/2024 at 5:15 AM - WMS sent the following email, "I arrived in the area at 515am. Drove my usual route in MP and DP. I observed no Prestige smells this morning. I drove behind 350 N Wolf and heard Mizken performing maintenance inside. During my most recent observations, I noted that they are leaving the overhead door at the rear of the 431 Lakeview Court open at the bottom about 18". Maybe the workers are trying to get fresh air into the building. I drove through the business park and arrived back at the VH about 545am."	0		
4/18/2024	04/18/2024 at 9:17 AM - WMS sent the following email, "We received a complaint from a Des Plaines resident. We jumped on it and caught the ripe smell of Prestige in Des Plaines. I would rank it as a 4-5 on a 10 scale; kind of rancid smell. I verified the resident's complaint and drove behind a school bus picking up kids to go to school around the entire subdivision. It also smells really bad (4-5 on a 10 scale) along Stevenson in MP. Probable the worst I smelled on the block and the wind blew it straight down the block past Central Road.	5	Stevenson MP	

4/19/2024	04/19/2024 at 5:15 AM - WMS sent the following email, "I arrived in the area at 515am however I delayed my observations this morning as it appears that Prestige is starting later (i.e. 7-7:30 ish). I went out and drove my usual route in MP and DP at 8am. Des Plaines is getting hit with a lot of smell this morning. MP is getting it too. Going north from Central on Wolf Road; the Des Plaines subdivisions are Craig Manor, Kylemore, and then Longford Glen. Craig Manor was at least a 5+ on a 10 scale this morning. Kylemore was next at 4-5 and then Longford Glen was a 2-3. Lowden in Mount Prospect ranged from a 2-4 all the way on Stevenson to Central.	5	DP	
4/23/2024	04/23/2024 at 5:10 AM - WMS sent the following email, "I arrived in the area around 510am, drove my usual route and a bit extra in MP & DP. Prestige was occupied and it appeared that they were doing maintenance inside; forklifts were on and moving. When driving in Des Plaines I noticed a faint Prestige smell in the Longford Glen. A faint 1 out of 10. The wind is blowing really strong towards East/Northeast this morning; once Prestige starts to operate they will most likely smell in DP."	1	Longford Glen DP	
4/26/2024	04/26/2024 at 5:45 AM - WMS sent the following email, "Arrived in the area around 525am, drove the usual route in MP and DP. Prestige lights were on however I did not see it operating, it looks like the employees were at the facility. I turned onto Lakeview Court from Mizken’s parking lot and smelled Prestige product. Drove onto Feehanville west and the smelled Prestige product. So they must have operated last night. It was a 2 on a 10 scale."	2	Feehanville Drive MP	
4/30/2024	04/30/2024 at 5:15 AM - WMS sent the following email, "I arrived in the area at 515am, I performed some light and truck code enforcement then I drove my usual route in MP and DP. I smelled a faint (1 on a 10 level) odor of Prestige product in the parking lot of 350 N Wolf. There appeared to be less vehicles (only 3 vehicles) parked at 431 Lakeview Court when I drove in the Mizken parking lot. I decided to drive around the building at 431 Lakeview Court and found the dumpster soaked in Prestige product and what appeared to be liquid by-products. Very rancid and nasty smelling as I drove by the dumpster. As I looked over to the side of the Prestige parking lot I noticed a rat running in the wooded area. It appears that the Prestige product disposal process is attracting rats to the area. I concluded the inspection after performing additional observations on lighting in MP and returned to the hall about 555am."	1	350 N. Wolf Rd. MP	
5/1/2024	05/01/2024 at 5:15 AM - WMS sent the following email, "I arrived in the area about 525am; drove my usual route in MP and DP. I stopped at 350 N Wolf; Prestige was not operating at the time. I drove to Mizken and parked behind some trees in the Mizken lot. I saw a few semis start to appear at the 431 Lakeview building. I stopped my vehicle in the Mizken lot and observed Prestige for awhile. After a few minutes, the machinery/cyclone started up and the start up sounded like a jet engine starting up. The whine was captured in this video I attached. The smell was very bad in the Mizken lot. Probably the worst I ever smelled outside, easily a 6-7 on a 10 scale. Like a combination of rancid cheese/food, gym locker clothes and old shoes. If Mizken’s HVAC was operating at that time and they were bringing in fresh air, wow, I can only imagine that smell being brought inside the Mizken facility. Bad smell. I stayed for awhile longer and left Mizken parking lot about 6am. Then purchased Joe Donuts for staff and arrived at Village Hall about 615am.	7	1601 Feehanville Dr. MP	
5/15/2024	05/15/2024 at 5:25 AM - WMS sent the following email, "I arrived in the area at 525am. Drove my usual route in MP and DP. In MP I noticed Prestige smell right away on Lowden at the corner of Stevenson. The smell was a pronounced Prestige smell of 3-4 out of 10 scale. The Prestige smell on Lowden smelled like cheese, old gym socks and wet dog mixed together. Then I drove through the business center, did some tall grass/weeds code enforcement and then came back to the Village Hall about 555am."	4	Lowden and Stevenson MP	
5/18/2024	05/18/2024 at 8:50 AM - WMS sent the following email, "I arrived in the area about 850am. I drove my usual route in MP and DP. At Dursey Lane in DP and Feehanville in MP intersection, I smelled Prestige product at 2-3 out of 10. The Prestige smell was more towards the rancid/sour/locker room smell. I drove to Montessori and Mizken parking lots; the smell was very bad this morning. I would say a 5 out of 10 with the Prestige smell being rancid and heavy. The amount of smoke that is coming out of the exhaust discharge seems darker the before. I attached a video. I arrived at the Village Hall about 920am."	5	1601 Feehanville Dr. MP	
5/20/2024	05/20/2024 at 5:25 AM - WMS sent the following email, "Arrived in the area about 525am, drove MP and DP. Prestige employees were onsite however the machinery was not running. I did drive on Lakeview Court cul-de-sac area and there was a Prestige cheese smell (about a 1-2 on a 10 scale). The smell trailed down Feehanville Court west and then died out. I doubled back to Lakeview Court and stayed behind the 431 Lakeview Court building to talk with a Nicholas employee and Prestige did not start up again while I was there. "	2	Lakeview Court MP	

5/23/2024	05/23/2024 at 5:20 AM - WMS sent the following email, "I arrived in the area at 520am. I drove MP and DP. I noticed a faint Prestige product smell on Central just east of Rand. I drove into Des Plaines and noted Prestige product smell in the area of Longford Glen. I would say a 1-2 on a 10 scale. Prestige had a semi truck at the loading dock and I could see (a lot) of product containers inside the facility. I drove through the business center and performed some additional code enforcement. I arrived at the hall about 550am."	2	Longford Glen DP	
6/4/2024	06/04/2024 at 5:56 AM - WMS sent the following email, "I arrived in the area at 515am. Drove the usual route in MP and DP. Cicadas were noisy this morning by Lowden and in Des Plaines. When I drove from Des Plaines over to MP on Feehanville, my nose was hit with a Prestige product smell right away. I would say a 3 (out of 10 scale). Then when I drove by Montessori School it was bad. Easily a 4 on a 10 scale; it was a lingering stink and really rough smelling by their playground. Then I drove through to Mizken's testing lab and it is bad there too. 4 out of 10 scale. Interestingly, Prestige (its equipment) was not operating when I made my observations. However, with that smell, it must have operated through the night/early morning. I think with the humidity today, we are going to hear a lot of Prestige complaints."	3	Feehanville and Wolf	
6/4/2024		4	1601 Feehanville Dr. MP	
6/5/2024	06/05/2024 at 5:20 AM - WMS sent the following email, "Arrived in the area about 520am. Drove my usual route in MP and DP while also performing code enforcement on some lighting unrelated to this case. As I was driving across Wolf Road from DP to MP, a caught a slight wiff (not even a 1 out of 10) of Prestige product. I continued to Montessori and Mizken parking lots. I smelled Prestige product in the school parking lot (2 out of 10). In the Mizken lot it was a 3 out of 10. Prestige machinery was not running however they must have been running recently. It was also raining this morning so I believe that helped reduce Prestige particulates/smell in the area."	3	1601 Feehanville Dr. MP	
6/6/2024	06/06/2024 at 5:40 AM - WMS sent the following email, "Arrived in the area about 540am, I drove usual route and did not smell any Prestige product. I went back to the Village Hall. Around 715am, I received a call on my cell phone from a number I did not recognize. I answered and it was Mary Beth Stillmaker. Mary Beth proceeded to file a complaint about Prestige saying it was nasty and it smells horrible. I asked for her address again and said I would stop out. The wind is blowing directly eastward at about 9mph. Straight into Des Plaines and Longford Glen subdivision I drove my usual route in MP and DP. In DP I smelled Prestige product right away (a 3 on a 10 scale). On Mary Beth's street on Middleton the smell was strong at a 4/5 out of 10. It was very cheesy. I double backed and smelled the area in DP and it was strong in the entire Longford subdivision. As I was heading out of the subdivision, Mary Beth flagged me down at the end of her driveway. She proceeded to yell/speak in a loud voice to me berating Prestige, the Village, and our attorneys so forth... At the same time, a MP Police squad arrived in the subdivision. It is my understanding from the officer there were two calls. One from Mary Beth and one from anonymous caller in DP on Dursey. Mary Beth walked up to the squad and my car as the officer and I were speaking. Mary Beth provided more of her narration...the Officer handled the situation well. I left the subdivision in DP and drove Wolf Road. I also smelled Prestige on Wolf Road and it was a strong 5 out of 10.	5	676 Middleton Lane DP	
6/8/2024	06/08/2024 at 7:30 AM - WMS sent the following email, "Arrived in the area at about 730am. Drove my usual route in MP & DP. Prestige was not operating at this time. There was some forklift work going on. A truck was removing some skids from the facility. There appeared to be some product staged for pick up in the loading dock. No Prestige smell noted at this time. I drove by Mary Beth's house in DP and her windows were open in front of the house."	0	676 Middleton Lane DP	
6/10/2024	06/10/2024 at 7:15 AM - WMS sent the following email, "I was in town earlier but waited since it appears that the Prestige is starting later in the mornings recently. I drove MP & DP area this morning at around 715am. Wind is blowing south at around 12mph and gusts up to 25mph. I smelled Prestige product while driving on Central (approx. 1-2 on a 10 scale). As I drove Lowden in MP, the smell was really strong at about a 4-5 on a 10 scale. I confirmed while in the Mizken parking lot that Prestige was running. I drove the Lowden area again on the way back to the VH and the smell was still the same."	5	Lowden Lane MP	

6/13/2024	06/13/2024 at 6:00 AM - WMS sent the following email, "I arrived in MP about 535am and performed some code enforcement on lights. Arrived at hall about 545-550am, dropped off some items and headed out to drive the usual Prestige route. I started driving usual route and noticed Republic emptying dumpsters at Prestige dumpsters. I detoured and drove over to the reuse truck behind Prestige. I stopped and had a short discussion with the route driver. I was treated with both the special smell of the dumpsters being emptied and the Prestige facility running. Wow. I asked the driver about the smell, cheese overload on dumpsters, and cheese sauce drippings. The route driver said those conditions improved since they spoke to Prestige. There was an employee of Prestige at the rear loading dock giving me a look. The discussion with the Republic driver was great and we concluded our talk. I left the Prestige property. I started driving my route again into Des Plaines and stopped in front Mary Beth's house in Des Plaines. I attached a message from yesterday that Mary Beth left. That is one of 6 calls this week so far...additionally people call my cell during the day and evening hours. I walked the block in front of Mary Beth's house. I attached a video with sound taken in Des Plaines. The other video was taken from next door to Prestige at 350 N Wolf. I additionally said good morning to a couple of residents walking/drinking coffee outside and had a short discussion. One was the neighbor of Mary Beth. Both residents were friendly after I introduced/identified myself from MP. Both said the sound is ridiculous and much worse at night. Smell is bad; they cant even open windows during nice weather. I consistently smell cheese about a 2 level out of 10 Des Plaines. In Des Plaines at Dursey I smelled a 3-4 level. I drove into the business park in MP and the smell stopped."	4	Dursey Lane DP	
6/14/2024	06/14/20214 at 8:08 AM - WMS sent the following email, "Was in MP earlier but delayed observations to get some variety. Around 710am today. Drove my usual route and smelled Prestige in Lowden neighborhood in MP immediately as I turned off of Central headed north. I would say a 3-4 on a 10 scale this morning. Wind blowing in a southernly direction (see below). I drove in Des Plaines and then back into Mount Prospect circling around to park in the Mizken parking lot to observe Prestige operating. There was someone walking around the 431 Lakeview building adjacent to the Mizken parking lot where I was parked. The person appeared to use his phone to take some pictures of me in my vehicle. No verbal exchange and I did not take any pictures today. The person kept on walking around to the front of the Prestige building. I did not recognize the person."	4	Central and Wolf Road MP	
6/15/2024	06/17/2024 at 6:33 AM - WMS sent the following email, "I was in the area to run on Saturday morning, so I drove my usual Prestige route. Arrived in the area about 8am and drove through MP and DP. I smelled Prestige product on Dursey in Des Plaines about a 2 on a 10 scale. When I drove to MP on Feehanville/business park I smelled Prestige immediately. It was a 3-4 on a 10 scale."	4	Feehanville Drive MP	
6/17/2024	06/17/2024 at 6:40 AM - WMS sent the following email, "Arrived in the area about 535am. Drove the usual Prestige route in MP and DP. When I was on Wolf Road and turned into the parking lot of 350 N Wolf, I heard the machines turn on at Prestige. Wind was blowing to the north. I drove through DP and headed into the business park. When I drove to Montessori and Mizken parking lot, the Prestige smell was very strong and rancid. I would say a 5-6 out of 10 in the Mizken lot and it hung heavy in the parking lot by the building. It smelled really bad, and I doubled back and drove on Lakeview and came back to through the Mizken parking lot again. Smell was same. There were workers leaving Prestige and walking through the parking lot when I first drove through the Mizken lot adjacent to Prestige. They all watched me as I drove through the Mizken lot."	6	1601 Feehanville Dr. MP	

6/17/2024	06/17/2024 at 10:13 AM - WMS sent the following email, "I received 3 additional complaints/messages this morning on my cell phone. One of which was Mary Beth; I attached the voicemail for you. I drove the MP and DP area. I verified the concerns that the complainants noted; primarily smell was noted in Des Plaines on Dursey, Feehanville, Montessori, and Mizken. In the Mizken lot the Prestige smell was still hanging really strong in the back loading dock area; it was a 4 and was pretty rough smelling. I called Mike Sobotta at Mizken to see if the smell was in his testing facility; he said no. Mike S said it was really bad this morning and on Saturday. I advised him that I verified both days."	4	1601 Feehanville Dr. MP	
06/24/202	06/24/2024 at 6:56 AM - WMS sent the following email, "Arrived in the area about 535am today. Drove my usual route in MP and DP. As I drove behind 350 N Wolf Road, Prestige was not operating. As I crisscrossed into Des Plaines and back into MP through the business park, I heard the Prestige system start. I turned into the Montessori parking lot, I started to smell Prestige product (maybe a 1 on 10 scale). I drove behind Mizken and there was a really bad smell from Prestige (4-5 on a 10 scale). I know the system just started up, but wow it was nasty smelling. I parked behind Mizken for a little bit more and the smell did not change. Then I went back to the Village Hall. Over the weekend, there was a total of 6 complaints (some repeats) that emailed. In addition, over the weekend, there was 4 calls on my cell phone in which I did not answer, and no voicemail was left. One on Friday night and the rest over the weekend. No messages."	5	1601 Feehanville Dr. MP	
7/8/2024	07/08/2024 at 4:16 PM - WMS sent the following email, "Arrived in town just after 5am. Drove my usual route in MP and DP. It appeared that Prestige was not operating at the time of my observations. When I was in the Mizken parking lot, I observed Prestige staff through their windows operating a forklift inside. They were most likely preparing to operate. When driving through Des Plaines, I noted Mary Beth Stillmaker's windows at her home were open. I concluded the observations about 530am and drove some additional construction sites in the MP downtown. Additionally, Dustin Coy received 2 smell complaints about Prestige via phone; one was Mary Beth Stillmaker at 1116am and another unnamed caller at 1117am."	0	1601 Feehanville Dr. MP	
7/10/2024	07/10/2024 at 5:12 AM - WMS sent the following email, "Arrived in the area at 420am, drove my usual route in MP and DP. It was raining fairly steady this morning. On Lowden in MP, I smelled Prestige Cheese in pockets at a 1-2 level. I doubled backed through the area and it (Prestige smell) was oddly in pockets with no patterns. I smelled it and disappeared quickly. In the parking lot of 350 N Wolf Road, I was hit with a significant smell of Prestige product at 3-4 out of 10 level; it was stinky. Interestingly, Prestige was not operating at that moment. I drove in DP and nothing there. I noticed a window open at Mary Beth's house. I drove over to Mizken and confirmed that Prestige was not operating. As I drove behind Mizken, I observed the Prestige workers what appeared to be sweeping and maintenance. They looked my way as it was pretty obvious that a vehicle was parked watching. There was only a handful of vehicles in Prestige lot so I can only surmise that they operated overnight or late into the night with the lingering smells. See wind direction below which is consistent with the Lowden locations as they are south of the facility. "	4	350 N. Wolf Rd. MP	
7/12/2024	07/12/2024 at 5:35 AM - WMS sent the following email, "I arrived in the area at 535am. I drove my usual route in MP and DP. I observed Mary Beth's windows open in front of her home. I verified that Prestige was operating this morning. I caught a super faint smell of Prestige along Lowden. Didn't even register a 1 out of 10. No other smells noted. Drove by the school and Mizken; I found no smells. I concluded the smell portion of my observations this morning and went back to Lowden and started the sound test. Sound test results under a separate email following this one."	0	1601 Feehanville Dr. MP	
7/17/2024	07/17/2024 at 8:25 AM - WMS sent the following email, "I arrived in the area at 545am. I delayed observations until later in the morning at 0730am because some complaints have been rolling in later in the morning. I drove my usual route in MP and DP. Wind is blowing towards the southeast. As I was driving in MP on Lowden east towards Wolf, my nose was smacked with a REALLY strong Prestige odor. It was particularly cheesy smelling, like a 6 out of 10. Very strong cheese smell along with a side of rancid smell. I drove into Des Plaines and the smell went from a 6 to 1-2 out of 10. I drove the business park and did not smell it there. I doubled back through MP in the really strong-smelling area to see if it was just a one and done before; however the smell was the same strength and putrid smelling."	6	Lowden Lane MP	

7/18/2024	07/18/2024 at 7:50 AM - WMS sent the following email, "I arrived in the area at 545am. Like yesterday, delayed my visit to try to catch them producing which worked. I performed some trailer and TGWDS (tall grass) code enforcement before and then drove my usual route in MP and DP. I immediately noted Prestige cheese smell on Lowden in MP and the neighborhood directly south of Prestige. It was consistently a 3-4 on a 10 scale. There was a couple of really ripe cheesy smelling area which were a 5-6 and then lessened to the 3-4. Drove in Des Plaines and noted a slight Prestige smell at about a 1 out of 10."	6	Lowden Lane MP	
7/23/2024	07/23/2024 at 6:18 AM - WMS sent the follwing email, "Arrived in the area before 530am. Drove my usual route in MP and DP. As I was driving down Lowden, I smelled some Prestige funky smell. I confirmed at 350 N Wolf that Prestige was operating. Went over to Des Plaines again and confirmed the same Prestige smell (about a 1-2 on a 10 scale). It was not a really cheesy smelling this morning, it was more acrid bitter and odd smelling. I doubled back through into the business park and went back through Des Plaines area. Smell didn't change. Wind is going to blow the smell straight into Des Plaines if it keeps the same pattern. I noticed Mary Beth Stillmaker's windows open in the front of her house."	2	Lowden Lane MP	
7/23/2024	07/23/2024 at 2:13 PM - WMS sent the following email, "This morning we received additional complaints from MP and DP residents. At lunch I ran to Des Plaines in the Longford Glen Subdivision and into the business park. The route is very similar to the route I drive. By 350 N Wolf the Prestige smell was really rough, 4-5 on a 10 scale, not cheesy, rancid like. Smell hung in the air. I ran into Des Plaines and around Longford Glen Subdivision and Prestige smell was as far away as 1793 feet away. I smelled Prestige smell in the same pattern as the wind. As I neared Dursey and Feehanville, it was one of the worst smells I noted in recent observations. 5-6 on a 10 scale and really rancid with very little cheese smell. I went to the Park View Montessori where I smelled it by their playground, a 2-3 scale and then ran by both the high rise Mizken and their testing lab and both areas stunk really bad, like 5-6 scale."	6	1601 Feehanville Dr. MP	
7/25/2024	07/25/2024 at 5:15 AM - WMS sent the following email, "Arrived in the area about 515am. Drove my usual route in MP and DP. Wind was pretty low and stagnant. As soon as I entered the Lowden neighborhood and south, I smelled Prestige immediately. It was 3-4 out of 10 scale this morning. Pretty stale and nasty smelling. I turned onto Wolf Road and was smacked in the face with Prestige smell; easily a 5-6 out of 10, just really rough smelling. I drove behind 350 N Wolf and it was equally nasty smelling as the smell just hung in the air; 5-6 out of 10. Drove into Des Plaines and smelled the Prestige a 1 out of 10 scale. Light smell. I doubled backed through the business park and went through all the same areas again. Smell was still the same. I attached a video of them producing feed/cheese; I was able to capture the cheese rolling up into the ovens while I was parked in Mizken."	6	Lowden and Wolf MP	
7/29/2024	07/29/2024 at 6:08 AM - WMS sent the following email: "Arrived in the area at 520am. Drove my usual route; wind is blowing to the north/northeast this morning. Drove through MP and DP, noted no smells south and east of Prestige. As soon as I crossed over to MP again from Des Plaines, I noted Prestige smell right away. I would say a 2 out of 10 along Feehanville which is north of Prestige. Then I drove to Mizken and it was really hanging heavy by Mizken and their loading dock area. I would say 3-4 out of 10 by Mizken. I noted less vehicles at Prestige; only 3 vehicles and I usually see 6-8 vehicles."	4	1601 Feehanville Dr. MP	

7/29/2024	07/29/2024 at 11:54 AM - WMS sent the following email: "I called up Mike at Mizken to ask if I can tour his testing facility right away since he smells Prestige inside. Mike Sobotta agreed for me to tour. I went to the testing facility building and drove around the building. I smelled Prestige product at a solid 4+ level on the exterior and it was pretty rough smelling. More acrid. I contacted Mike Sobotta and toured the inside. I did smell Prestige product inside of their testing lab. It was a 1+ out of 10. Mike Sobotta mentioned to me that they have to put their filter replacement on their roof top units on an expedited replacement schedule due to Prestige smell. IMO once a filter has an an acrid smell like Prestige, you have to change that filter to get that smell out of the make air. At some point when the facility opened, they had 100% dilution air from the outside per Mike. They reduced to 50% dilution air to see if it help reduce the Prestige smell and then reduced Mizken reduced again down to 10%. Even with the 10% dilution air, Mizken still smells it in their facility and so did I. Any lower dilution air and it would be a problem for their air quality."	4	07/29/2024 at 6:08 AM	
7/30/2024	07/30/2024 at 9:52 AM - WMS sent the following email, "Arrived in the area around 535am. Drove the usual MP and DP areas and routes. I observed Prestige operating. Wind was pretty stagnant and humidity was high. Smell was very faint in the Mizken lot. Maybe 1 out of 10, very faint. Also noted Prestige smell on Feehanville. 1 out of 10. I doubled back again and found the results consistent and light smelling this morning."	1	07/29/2024 at 11:54 AM	
8/7/2024	08/07/2024 at 5:54 AM - WMS sent the following email, "I arrived in the area at about 450am. Drove usual MP and Des Plaines areas. Prestige was not operating at the time; no smell. Mary Beth's windows were open on the front of her house. I did not notice any residual smell in the area so they must not have operated overnight. I parked in an adjacent parking lot (Mizken) and watched the Prestige facility. I notified Grace at Trinity that I was onsite. I continued my observations and at 521am the first cyclone started up. Then at 523am, the second cyclone started up. I then notified Trinity that they started up and to plan on performing observations. Definitely a different time than 6am as the Prestige owner stated. About a minute later as I was pulling away from my parking spot, I did notice a smell of Prestige product in the parking lot of Mizken. I did not notice that before the cyclones started up. The equipment/cyclones starting up must have sent out a puff of cheese smell. It was stale/spoil smelling at a 1-2 out of 10. Trinity will be on route this morning to perform observations. "	2	1601 Feehanville Dr. MP	
8/8/2024	08/08/2024 at 5:51 AM - WMS sent the following email, "I arrived in the area at about 450am. Drove usual MP and Des Plaines areas. Prestige was not operating at the time however it must have overnight. I smelled Prestige Product in the Lowden neighborhood at about a 2-3 out of 10 and in the Kylemore neighborhood in Des Plaines at about a 2 out of 10. I notified Joseph at Trinity that I was onsite. I continued my observations and at 523am the first cyclone started up. Then at 527am, the second cyclone started up. I notified Trinity that they started up and to plan on performing observations."	3	Lowden Lane MP	
8/9/2024	08/09/2024 at 6:03 AM - WMS sent the following email, "I arrived in the area at about 450am. Drove usual MP and Des Plaines areas. Prestige was not operating at the time however it must have overnight. I smelled Prestige Product in the Lowden neighborhood; rancid smelling at the end of the block at Lowden and Wolf Road; 3-4 out of 10. Smell hung in the air. I notified Joseph at Trinity that I was onsite. I continued my observations and at 531am the first cyclone started up. Then at 532am, the second cyclone started up. I notified Trinity that they started up and to plan on performing observations. Trinity confirmed. I doubled back through the Lowden area and the smell was the same."	4	Lowden and Wolf MP	

8/12/2024	08/12/2024 at 5:55 AM - WMS sent the following email, "Arrived in the area at 455am. Drove usual route in MP and DP areas. Prestige was not operating at the time and from what I can observe not in the early morning hours either. I do not smell Prestige product. I notified Ted at Trinity that I was onsite. I continued my observations and at 521am and 523am the cyclones started up. I then notified Ted at Trinity that they started the equipment. Trinity acknowledged and will be out to sample."	0	Feehanville and Wolf MP	
8/12/2024	08/12/2024 at 9:12 AM - WMS sent the following email, "I drove the usual route in MP and DP again. I noted Prestige smell in Kylemore at about a 3 on a 10 scale. I drove to Longford Glen and noted Prestige smell of 2-3 out of 10. I drove by Prestige again and noted less dumpsters at the location. They removed the largest dumpster and relocated the smaller dumpsters to a different location on the property. That large dumpster was there for a long time and was consistently used. Wonder if it will reappear. Also, 431 Lakeview appears to have sealed coated their property over the weekend. Prestige vehicles were parking at the 1601 Feehanville (Mizken building). I wonder 1601 knew about that... Trinity in MP and DP sampling."	3	Kylemore Greens and Longford Glen DP	
8/13/2024	08/13/2024 at 6:20 AM - WMS sent the following email, "Arrived in the area at 455am. Drove usual route in MP and DP areas. Prestige was not operating at the time and from what I can observe not in the early morning hours either. I do not smell Prestige product. Prestige was loading a delivery this morning. I notified Ted at Trinity that I was onsite. I continued my observations and at 531am and 533am the cyclones started up. I then notified Ted at Trinity that they started the equipment. Trinity acknowledged and will be out to sample."	0	Feehanville and Wolf MP	
8/13/2024	08/13/2024 at 9:00 AM - WMS sent the following email, "Drove in MP and DP about 15 minutes ago. Prestige smell is really rough and nasty smelling now. In the Lowden neighborhood, I would call it a 4-5 out of 10. I let Trinity know."	5	Lowden Lane MP	
8/14/2024	08/14/2024 at 3:36 PM - WMS sent the following email, "I have been trying to get this email out all day. Sorry it took a while. I arrived in the area at 715am. I notified Trinity last night that I was arriving later onsite this morning. Prestige was operating. I drove the usual areas in MP and DP. I found the wind current/direction very unusual; out of the southeast, see below. I noticed the smell at Park View Montessori, and it was 3 out of 10 scale. Trinity was notified and I also noted the unusual wind pattern to Trinity."	3	1601 Feehanville Dr. MP	
8/15/2024	08/15/2024 at 5:47 AM - WMS sent the following email, "Arrived in the area at 455am. Drove the usual route in MP and DP. Wind direction is odd again (see below) and also it is raining now. I went to park at the loading dock at Mizken to watch the startup. I noticed Prestige smell right away at Mizken so they must have operated overnight. It was 3 out of 10 in the loading dock area of Mizken. At about 515am, Prestige started up again. Once they started up again, the machines seemed to have a big puff of Prestige product smell come out and it just floated over to Mizken and me in my vehicle. Pretty rough smelling. It went from a 3 to a 4-5 while I sat in my vehicle after the startup of the Prestige machinery. Also, the smell was a cross between cheese, locker room, and wet dog this morning so it was really unpleasant cheese smell hanging at Mizken. Trinity notified and will be sampling."	5	1601 Feehanville Dr. MP	

8/15/2024	08/15/2024 at 9:17 AM - WMS sent the following email, "We had to shift some gears this morning. It was raining so Trinity couldn't take sampling outside this morning. We were going to cancel but the Village received a complaint from Mike Sobotta from Mizken, I decided to visit Mizken and it was really bad inside the lab in Mizken. 4 out of 10 scale INSIDE the building. Outside was a 5-6 scale. Really rough smelling outside. Mike Sobotta granted permission to sample within his facility. I consulted with Grace at Trinity to see if they could sample inside the facility, and I decided to move forward with the test in lab interior space with Trinity. Trinity performed the sampling. I believe it was a significant smell on the scale especially on the inside of a building laboratory however you will have to consult with the final field report. No Mizken testing was being performed at the time of the Trinity sampling. We visited Park View Montessori while we were doing inside spaces and we noted no Prestige smell inside the school."	6	1601 Feehanville Dr. MP	
8/16/2024	08/16/2024 at 8:07 AM - WMS sent the following email, "I waited a bit to perform observations this morning. Prestige was operating this morning. Drove through MP and DP. Wind is blowing into Des Plaines and northeast Mount Prospect. I noted Prestige smell on Wolf Road at about a 3 out of 10 this morning. At 350 N Wolf Road at about a 3 and then Des Plaines Longford Glen at 3 level. It seemed to settle in the Longford Glen subdivision and kind of hang there. I drove into the Walgreens parking lot (corner of Kensington and Wolf) and noted Prestige smell at about a 1-2 level."	3	350 N. Wolf Rd. MP	
8/19/2024	08/19/2024 at 6:37 AM - WMS sent the following email, "I saw this email from this morning. We usually do not receive complaints from residents this early so I stopped in the area. I arrived in the area at about 520am. Drove the usual route in MP and DP. I noticed Prestige smell right away in the Lowden neighborhood. I would say 3-4 out of 10 scale. The smell got progressively worse to a 4-5 at Wolf Road and Lowden. Wind is blowing towards the south/southeast. I drove the complainants block in Longford Glen and then in Kylemore. Noise was not any different than before. I smelled Prestige in Kylemore at a 2-3 and by the entrance to Longford Glen at a 1-2 out of 10 scale."	5	Lowden and Wolf MP	
8/20/2024	08/20/2024 at 7:02 AM - WMS sent the following email, "Arrived in the area at 540am. Drove my usual areas in MP and DP; Prestige was operating this morning. There was a significant smell on Wolf Road by the Lowden and Kylemore neighborhoods. I would say 3-4 on a 10 scale. I drove through Kylemore and it was very strong in the subdivision; a 4-5 out of 10. When I was at 350 N Wolf Road the smell was very bad this morning; reaching a 5-6 out of 10. It smelled really bad, more rancid and spoiled smelling this morning and heavier smelling. Additionally, Prestige operated last night as I received complaints from residents in the 7-9pm range."	6	350 N. Wolf Rd. MP	
8/21/2024	08/21/2024 at 9:34 AM - WMS sent the following email, "I arrived in the area at 550am. I drove usual MP and DP locations. Similar to yesterday on locations, Prestige was operating. In the Lowden neighborhood, it was 1-2 out of 10. In Kylemore neighborhood and intersection of Wolf, it was 3. I drove Longford Glen and noted a 1-2 deeper in the subdivision and closer to Kylemore subdivision on the south. Drove the business park, Mizken, and Montessori observing Prestige operating. At 350 N Wolf it was a 2-3 out of 10 in addition there were 2 semi-trailers backed up to loading docks for shipping/receiving. An additional one semi-trailer was parked and waiting because they was no access."	3	350 N. Wolf Rd. MP	

8/21/2024	08/21/2024 at 9:34 AM - WMS sent the following email, "After receiving additional neighbor complaints this morning, I drove the MP and DP area again. The smell has increased since this morning. The traffic and construction were a little funky now so I changed up my route but went to the same areas. At the Lowden neighborhood it was 2-3 closer to Wolf, the smell did travel further down Wolf Road hitting Central and that auto shop which is a 3. Outside of 350 N Wolf on Wolf it was a 4, with a really strong, heavy stale cheese smell hanging in the area. Longford Glen had the smell at their entrance now at a 3 level. Smell was hanging at about a 2 outside of Mizken loading dock area. The 2 trucks were gone out of the Prestige loading dock and the one that was waiting for a loading dock position I observed earlier is now in place. A lot of truck traffic this morning..."	4	350 N. Wolf Rd. MP

Complaint Date/Time or Meeting Date	Name	Phone	Email	Address	
12/20/2023 at 5:45 AM - WMS visited facility and sent the following email, "Starting about 5:10am, I drove Wolf Road this morning between Kensington and Central; I did not smell or hear Prestige. I stopped in the office about 5:25 and went back out. I drove my usual route around MP neighborhoods (i.e. Lowden) and did not smell or hear anything. I drove to Des Plaines across the street and did not smell any cheese product. I did faintly hear what I believe to be the Prestige cyclone working. I drove Des Plaines neighborhood pretty extensively and I did not smell anything. SEE 1ST VIDEO FROM DES PLAINES VISIT THIS MORNING I drove north on Wolf and turned west bound down Feehanville and noticed the smell of cheese right away in front of the Montessori school. I drove (with my headlights off) into the parking lot between Mizken and Prestige parking in the Mizken loading area. At 5:45 I witnessed Prestige factory workers inside through the Prestige windows walk around and I saw product on the conveyor belt moving into the machine (see video). I took a few more pictures and my camera flashed. A few of the factory workers witnessed my flash on the camera and I can see them rushing to the back of the building wall inside and shut down the Prestige cyclone machine stopping operation. I did not drive onto 431 Lakeview Property at all today. SEE 2nd VIDEO FROM MIZKEN PARKING LOT VISIT THIS MORNING Stas the attorney said that they were only operating to 5:00am. Prestige operated outside of the hours they told us; see below. SEE PICTURE OF TIME STAMP					
12/28/2023 at 5:15 AM - WMS sent the follwing email, "I arrived in town today about 5:15 and drove my usual route a few times. On Lowden in Mount Prospect, I noted a heavier smell of cheese in the neighborhood. On a scale of 1-10 (10 is worst), it was a 3-4 on Lowden. The cheese smell stopped as I drove across Wolf quite literally in the middle of the road. I drove multiple neighborhoods in Des Plaines and did not smell anything there. No smell was noted in the business park, 350 N Wolf or by Mizken either. Prestige was confirmed operating this morning. It was a bit unusual to smell the Prestige product on Lowden so I checked the wind and speed this morning. The wind is blowing straight south at the time and at 9 mph. The other days of my observations generally the wind was blowing towards the northeast-north at varying 5-12 mph. I made it back to the Village Hall about 5:56am.					
12/28/2023 at 10:15 PM	Joan Splitt			1510 E Jeffery Drive MP	
12/29/2023 at 5:10 AM - WMS sent the following email, "I arrived in the area about 5:10 and toured the usual roads in Mount Prospect and Des Plaines. There was a steady rain this morning. I did not notice any smell or noise anywhere. I drove past Prestige and it appeared that they were not working. I concluded my observations about 5:40."					

Date/Time	Complainant	Phone	Email	Location
01/03/2024 at 5:15 AM - WMS sent the following email, "Arrived in the area about 5:15am. I drove my usual route a few times through MP and Des Plaines, no Prestige smell or noise. Drove by Prestige facility and it was dark with no apparent operation or noise. Concluded driving area about 5:50am. Chief Eterno; please see highlighted email below showing hours for Prestige's operation schedule this week.				
01/04/2024 at 5:05 AM - WMS sent the following email, "Arrived in the area about 5:05am, drove my usual route. On Lowden I noticed a faint smell of Prestige product (i.e. cheese). On a scale of 1-10, I would say a 1; very light smell. I drove into Des Plaines and heard a faint clicking/light pounding noise. Then I went to the Business Park. Then I drove over to 350 N Wolf and noticed a very faint Prestige smell on the south side of the building (scale of 1) and then drove to the back of the building that faces Prestige (west side). I took the attached video (time stamp of 5:24am) of workers pounding on the bottom of one of the silos in the back. That is most likely what I heard clicking in Des Plaines. It was pretty loud at 350 N Wolf building. I drove around the 431 Lakeview and noted two workers pounding on something on the silo. I did not stop and kept going.

01/04/2024 at 1 PM	Sammy Arida	(847) 308-9427		641 Longford Drive DP
01/04/2024 at 2:30 PM - WMS sent the following email. "We received a couple of complaints late this morning about the smell of cheese from Prestige. Both Brandon and I followed up at the site this afternoon and drove the usual paths. We detected a faint smell of Prestige product in the 350 N Wolf property parking lot. I went into Des Plaines and drove the area fairly extensively and smelled no Prestige product. If you want a comparison on the 1-10 scale for this afternoon. It would barely be a 1 rating with a very short longevity like less than 1-2 minutes.				
01/05/2024 at 4:50 AM - WMS sent the following email, "Arrived in the area about 4:50. Proceeded to drive my normal route in Mount Prospect and Des Plaines. I noticed very faint smell of Prestige product in the business park and in Mizken's parking lot (scale 1 on a 1-10). The production was not running, it looked like they were sweeping up inside. Concluded tour and back to hall about 5:25am. We will perform observations later this morning too."				
01/05/2024 at 9:45 AM - WMS and Brandon drove around the business park and subdivisions. Smell of around a 1-2 rating noted at the Mizkan Testing facility. No smell noted at residential areas.				
01/08/2024 at 5:20 AM - WMS sent the following email, "Arrived in the area about 5:20 am this morning. I drove my normal route in MP and DP. No Prestige product smell or noises were observed this morning. Left the area about 5:45am."				
01/09/2024 at 5:15 AM - WMS sent the following email, "Arrived in the area about 5:15am. Drove my usual route in MP and DP; no Prestige smell or noise observed. Since it was snowing and a bit unusual weather, I double backed and went through usual route again. No Prestige smell or noise observed. The lights were on at Prestige and cars were in the parking lot. Concluded observations about 5:45am."				
01/10/2024 at 5:59 AM - WMS sent the following email - I arrived in the area about 5:05am. Drove my usual route through MP and DP. I noticed a smell of Prestige product in the parking lot located at 350 N Wolf. On a scale of 1-10 it was a 1-2. The smell did not travel to Wolf; it was fairly concentrated in the parking lot. I double backed through the business park and Mizken; I found no additional smell or noise from Prestige. I drove back south to Central and performed some additional code enforcement on a separate truck parking complaint off of Centennial that we received. I found no additional Prestige smells after doubling back through MP. "

01/10/2024 at 9:49 AM - WMS sent the following email, "This morning, we have received a total of 3 additional residents and a Mizken complaints about the Prestige operation. I drove my usual route and to the two addresses of complainants in DP. I observed Prestige smell at the two locations in DP. On a scale of 1-10, it was 4 in Des Plaines and consistent through the entire neighborhood in Longford Glen. I smelled a little in Kylemore (Scale 2 out of 10). I went to Mizken and smelled Prestige product (Scale 3 out of 10). We will continue to monitor today.				
01/10/2024 at 10:08 AM	Norma Kreiner	(847) 280-0615		660 Middleton Lane DP
01/10/2024 at 10:23 AM	Marilyn Aloisio	(708) 602-2457		680 Middleton Lane DP
01/10/2024 at 10:58 AM - Mark M. emailed that several PD complaints had been received about smell.				
01/10/2024 at 11:30 AM				640 Castlereas Lane DP
01/10/2024 at 12:23 PM	Alan Gredell	(847) 975-5723		655 Castlereas Lane DP
01/10/2024 at 1:28 PM - WMS sent the following email, "Hello, we have been patrolling the same Mount Prospect and Des Plaines areas to observe for Prestige product smell and noise today. 1) Between 9:30 and 10:30am today, we noted significant smells in Des Plaines (5 on a 1-10 scale). Also a 3-4 on the scale at 350 N Wolf. 2) Between 11:30am and 1:00pm, we noted significant smell at the Mizken tower (3-4 on a 1-10 scale). Also a 1-2 on the scale at 350 N Wolf. 3) Workers opened the silo bottom and were working at the bottom about 1:10pm. When I was at 350 N Wolf, the wind picked up and blew the smell towards me in my vehicle-wow, that was a nasty smell, like rancid smell. The machines were not operating; it looked like it was being serviced. Also, I received a call from Kevin @ Cook County. I left a message for Kevin and will update him on the status. As you can hear from the message, as of recently, they (Cook County) has not identified any odor issues. They even worked last weekend to observe. Interesting.				
01/11/2024 at 9:45 AM - WMS sent the following email, "About 9:45am, I witnessed two Mostardi Platt trucks at the Prestige facility. Prestige was not running and it appeared that there were technicians onsite. Drove the usual route in MP and DP, no smells or noise noted."				
01/12/2024 at 5:15 AM - WMS sent the following email, "Arrived in the area about 5:15am, toured my usual route in MP and DP. No Prestige smell or noise noted. There were not as many vehicles in the lot of Prestige as normal. Snow was coming down a lot heavier; lights were still on though. I drove the area behind Lowden again and went by Westgate area for some other code enforcement activity. Back at the hall about 5:55am"				
01/15/2024 at 5:15 AM - WMS sent the following email, "Arrived in the area at about 5:15am, toured my usual route. Temps were -13 actual and -35 wind chill. Dang, its cold. No Prestige smell or noise observed. I double backed through the same area and noticed nothing. I parked at Mizken in their parking lot which is adjacent to Prestige. I observed Prestige through their windows (like a fish bowl with the lights on). Employees were inside and appeared to be loading product into the hopper. I believe it was the bags of soy product which is added to the cheese to make the Prestige feed product. Back at the hall at about 5:55am. We will make additional observations this morning since I saw them loading supplies."				
01/15/2024 at 12:30 PM - WMS sent the following email, "I was running a 5 mile route yesterday about 12:30pm in MP and was just south of Kensington on Elmhurst Avenue (by McDonalds and the medical building) when I caught a smell of Prestige product. I stopped to adjust my face mask and scrape the ice off my glasses, then I caught the smell (1-2 on a 10 scale)."				

01/16/2024 at 5:05 AM - WMS sent the following email, "Arrived in the area about 5:05am. I drove the usual areas both in MP and DP. I did not smell any Prestige product. When I drove behind 350 N Wolf, there were two workers outside under the silos and the workers appeared to be using an impact tool on a fastener of some type. Picture metal on metal sound drilling; probable not the best time to do this in the morning to work. They saw me observing them and stop using the tool. I proceeded to drive the business park and then to Mizken. The workers were back under the silo working on the something. I drove everything again and came back to the Village Hall about 5:45am."

01/19/2024 at 5:20 AM - WMS sent the following email, "Arrived in the area at 5:20am. Drove my usual route in MP and DP. I did not notice any Prestige product smell or noise. When I drove to Mizken, the lights inside Prestige were on and staff were inside. I observed 5 staff members standing inside and all looking at the conveyor belt. It did not look like Prestige was running. Got back to the hall about 5:55am."				
01/22/2024 at 5:15 AM - WMS sent the following email, "Arrived in the area around 515am. Drove my usual route in MP and DP. No smell or noise observed along the usual route. Prestige employees are inside the facility. I saw them standing around the machinery when I was parked at Mizken. Arrived back the hall around 550am."				
01/23/2024 at 5:35 AM - WMS sent the following email, "Arrived in the area about 535am. Drove the usual route in MP and DP. I noted no Prestige smells or noise. Arrived at the hall about 555am. Roads were rough. Mount Prospect roads were in better condition than Des Plaines"				
01/24/2024 at 5:30 AM - WMS sent the following email, "Arrived in the area at 530am yesterday. Drove my usual route. No noise or smells noted. Went back to the Village Hall for a bit. Then left the hall early before going to the State of the Village. I drove usual areas again in MP and DP. Prestige was operating however I noted to no Prestige smells. I did notice noise from the Prestige machinery. I attached a video that I took at 651am from the parking lot of 350 N Wolf. I concluded my observations and then drove to Old Orchard for the breakfast meeting."				
01/25/2024 at 5:20 AM - WMS sent the following email, "Arrived in the area about 520am. Drove my usual route in MP and DP. No noise or smells were noted this morning. While I was parking in the Mizken parking lot, I noticed multiple employees inside Prestige moving product around with a fork lift. Concluded observations and back at hall about 550am."

01/29/2024 at 9:44 PM - Officer Davis sent the following report, "On 01/29/2024 at 2144 hours, I responded to 431 Lakeview Ct for a noise complaint from an anonymous caller. While en route to the location Ofc. Davis advised that she had been in the area for the last 15 minutes and had not heard or smelled anything. I arrived at the above location and could not hear anything after searching the area. I also could not smell anything in the area. Nothing further at this time."

02/01/2024 at 2:13 PM - WMS sent the following email, "This morning we received a total of 6 Prestige smell complaints from their operation. Brandon verified the smell and it is intermittent. Brandon noted it was a 3-4 (out of 10) southeast of the Prestige facility. We received another anonymous complaint this afternoon. At lunch this afternoon, I ran my usual route that I usually drive through MP and DP. I noted Prestige product smell south of the Prestige facility along Lowden and it was a 3-4 (out of 10). I then ran to Des Plaines and noted a light Prestige smell of a 1 (out of 10) in Longford Glen. I then ran to Mizken and noted a 1 (out of 10) in their parking lot. I then ran to the village hall. No other smells or noises noted. It didn't look like they were operating at the time I noted the smells; it was residual Prestige smell."				
02/02/24 at 5:05 AM - WMS sent the following email, "Arrived in the area about 5:05am, drove my usual route through MP and DP. Prestige was not operating however they were working on equipment inside the facility. I observed the workers through the windows when I was in Mizken's lot. When I was in the Mizken lot, I picked up a slight Prestige odor, about a 1 (on a 10 scale). It was most likely residual because I did not notice any Prestige smells anywhere else. Concluded my observations about 5:35 then did some other code enforcement on some truck parking at a house unrelated to Prestige."

02/02/24 at 9:50 AM - WMS sent the following email, "We received a couple of complaints about cheese smell from the Stratford and Lowden area this morning. Both Brandon and I performed observations and confirmed the smell at that intersection. I would classify it as 4 (out of 10) at the Stratford and Lowden area. The wind is blowing southwest and we smelled Prestige product along Central Road, it was the strongest west of Rand and Central. I would it wavered between a 1-2 (on a 10 scale). We tracked the smell south of Central down Owen and as far south as St. Paul Church which is off Busse. Additional staff smelled Prestige product around Village Hall (maybe a 1 on a 10 scale). Vary faint here. I measured the distance via aerial google and the distance we can smell the Prestige product is a mile."

02/20/2024 at 11:41 AM - WMS sent the following email, "The Village received complaints from both Mizken and Montessori School in the Business Park. 20 minutes after receiving the complaints, we went and performed our normal observations both in MP and DP. I did notice Prestige smell at both facilities this morning at approximately 1030-1045am. Specifically it is 3 (on a 10 scale) on the outside the entrance of Mizken and Montessori School. It was more of 4-5 at alcoves near door entrances because it seems like the smell gets trapped by the wind. Both facilities are north of Prestige. I went into Mizken and smelled Prestige product immediately upon entering their office (a 1 on a 10 scale). I noticed the Prestige smell more pronounced in their warehouse (a 2) and near their test kitchen. I walked their entire facility and smelled it in their office. The workers smelled it more significantly earlier. The video is from the loading dock area of Mizken. I went into Montessori School and smelled it immediately in their foyer. The employee said that the kids and teachers came in early from their recess. The smell was worse by the playground; I would say a 4 on				
02/21/2024 at 8:55 AM - WMS sent the following email, Since the complaints started coming in about this time yesterday, I drove my usual route in MP and DP. I noticed a faint smell of Prestige product in Des Plaines (a 1 on a 10 scale). Then I crossed over Wolf to the business park and then the Prestige smell hit me (3 on a 10 scale). Then I drove the parking area around the building of the Montessori School and Mizken; the smell in the parking lot was very strong (4 on a 10 scale). It was particularly pungent by the loading dock of Mizken (that is directly north of Prestige). I called Mike Sobotta at Mizken right away and I asked if the smell was in his facility yet. Mike said no but Mike did smell the Prestige smell in the parking lot. I asked him to call my cell if he notes the Prestige smell in the building. Wind is blowing towards the north/northwest. The smell patterns I noted match the wind direction. Also, kind of an odd thing; as I was parked adjacent to the Prestige facility in the Mizken lot, I noticed a sprinkling of liquid (like a rain drizzle but it wasn't rain) which I did not note in other areas of the business park when I drove. I used my wipers and the droplets smeared."				
Arrived in the area at about 525am. Drove the usual route through MP and DP. Prestige was not operating however there were a lot of vehicles in the lot. There is also a large dumpster that appeared behind the building in the drive aisle. The large dumpster is an addition to their normal refuse. When I was at 350 N Wolf, there was a significant aroma of Prestige product wafting into the parking lot of 350. Concluded about 555am. The wind is blowing in a south direction today...				
02/22/2024 at 8:00 AM	Robert McElhattan	(847) 271-6890	rdm20fan@yahoo.com	1504 Lowden MP

02/23/2024 at 5:20 AM - WMS sent the following email, "Arrived in the area about 520am. Drove in MP and DP; Prestige appeared to be working inside as I heard a drill/impact tool from the 350 N Wolf parking lot. A slight lingering Prestige smell was hovering in a few spots in the 350 N Wolf parking lot. No other notable observations. The dumpster (like a 30 yard) was in the back of the building parking area at Prestige. I checked with PW who checked with Republic; the route driver mentioned that sometimes powder and other by-products are picked up. PW will let me know what the dumpster contains next time it is picked up. The dumpster sitting in the parking lot drive aisle is not regular in my opinion; kind of unusual. Back to the hall by 550am'ish."

02/27/2024 at 11 AM	Kathy English	(847) 296-3044		1601 Feehanville Dr. # 300 MP
02/27/2024 at 11:53 AM - WMS sent the following email, "We are receiving a lot of complaints this morning. Park View Montessori called (Kathy English) and she said parents were complaining/upset with the smell. Also, children cannot go outside. I smelled it in their parking lot and Mizkens parking lot. I contact Mike at Mizken and he has not smelled it inside yet but did outside. I would say a 3-4 on a 10 scale. I drove Des Plaines and smelled it on Dursey Lane in Long Meadow at the intersection of Wolf (1-2 on a 10 scale). I drove further north in MP since the wind was pretty strong and I smelled it on Euclid (1-2 on a 10 scale). That is 4768 feet away from Prestige. All complaints today are very vocal since the weather is getting warmer and people are going out."

03/12/2024 at 5:35 AM - WMS sent the following email, "Sorry the update is a bit late; here you go. 1) I arrived in the area about 535am and drove my usual route in MP and DP. No Prestige noises or smells noted. Back to hall about 555am. 2) I drove the usual route at about 800am and found Prestige operating. I noted Prestige product smell in the 350 N Wolf parking lot (about a 1-2 on 10 scale). Wind was blowing approximately 12-15 mph to the northeast. I smelled Prestige product in Des Plaines on Dursey Lane heading west to Feehanville in MP. Smell in Des Plaines was a solid cheesy 4+ (on a 10 scale); kind of cheese punch to the face. Nothing noted by Mizken. I drove to Kensington Road to the Walgreens parking lot and smelled Prestige product there (a 2 on a 10 scale). I drove through the business park and arrived at the hall about 845am. 3) At 912am, I received a complaint that Republic Services was picking up the dumpster at Prestige and they found leaking liquid which was presumed to be leaking discarded cheese product and most likely water or a cheese by product				
03/12/2024 at 10:15 AM	Sargon Merza	(847) 840-9427	smerza711@att.net	650 Dursey Lane DP

03/12/2024 at 3:28 PM - WMS sent the following email, "Hi Allen and Lance, please relay this complaint to Prestige's attorney. A complaint was received today that Republic Services found that there was what is assumed to be cheese residue along with liquid and/or cheese by-product leaking from the dumpster. The driver is unable to transport leaking products or by-products. Please ask that they refrain from placing anything that can leak out of the dumpsters. Also, as a side note, any dumpster or rolloff will have to be located in the appropriate spot and not the drive aisle next to the building. Any questions please let me know. Thanks"				
03/13/2024 at 5:45 AM - WMS sent the following email, "In the area at 545am, looking as some lights. I waited until 630 to perform Prestige observations. Not as windy today- 2 mph heading east towards Des Plaines. I drove the usual route in MP and DP. As soon as I turned off Lowden and crossed into Des Plaines I smelled Prestige product. The intensity was about a 1-2 on a 10 scale. I drove through Des Plaines and caught a smell of Prestige at about a 1 level. I went to the business park and Mizken area where I did not pick up any smells. It appears they are starting later in the morning now."				
03/14/2024 at 3:45 AM - WMS sent the following email, "In the area at 430am. As I was driving east bound on Central near Albert/Rand I noted a Prestige cheese smell; a 1-2 on 10 scale. This is pretty unusual however I smelled Prestige this far west before. I continued my usual drive in MP and DP noting a light cheese smell on Lowden. I noted the wind is blowing towards the west at 7-8 mph. Driving along Des Plaines on Wolf Road I heard the whirling noise of the Prestige Cyclone. Prestige was operating this morning. As I parked in Mizken's lot by Prestige, I noted that the Prestige conveyor belt was loaded with product going into the oven. As I was parked for a few minutes, workers observed me in my vehicle in the Mizken parking lot. One worker waved to me from the inside of Prestige. I did not wave back. The smell was very strong outside of the ice rink on Lakeview Court. I would say a 4-5 on a 10 scale. I drove Feehanville and Business Drive smelling Prestige product along the way. I drove back to the Village Hall noting the cheese smell on Central again as I arrived at the Village Hall

03/15/2024 at 5:10 AM - WMS sent the following email, "Two visits already this morning I arrived in the area at 510am. Drove my usual route in MP and DP. There was a lot of activity at Prestige this morning. The conveyor was not operating. No Prestige smells this morning. There was plenty of noise from the forklift and trucks. SEE ATTACHED VIDEO. Forklift being operated outside moving dumpsters. Around 6am, Jason and I had to visit an unrelated lighting complaint. After the lighting complaint at about 630am, we drove the Prestige route again in MP and DP. Prestige started operating and the wind is blowing south/southwest at 9mph. We smelled Prestige on Central, Stevenson, Lowden (about a 1-2 on a 10 scale). Nothing in DP, by Mizken, or Parkview. There is heavier truck traffic and it appears to be heavier production at the Prestige facility. Not sure what that means but I do see a difference with increased production and their truck traffic."

03/18/2024 at 5:30 AM - WMS sent the following email, "I arrived in the area at 530am. I drove the usual route in MP and DP; as I approached the entrance of the parking lot of 350 N Wolf, I smelled cheese at a level 1 out of 10. As I drove closer to the rear of the Prestige while still in the parking lot 350 N Wolf, I smelled a very significant smell of Prestige cheese product however they were not operating. The rear overhead delivery door of Prestige was open and the air was permeated with cheese smell in the parking lot of 350 N Wolf. I would say a 5 out of 10 level. I saw 3 workers outside servicing the exterior silo and while I was in the Mizken parking lot, I observed through the windows of Prestige employees servicing the equipment. I finished my observation route and went back to the Village Hall at approximately 555am."

03/19/2024 at 5:25 AM - WMS sent the following email, "Arrived in the area about 525am, drove my usual route in MP and DP. At the intersection of Rand and Central, I smelled Prestige product right before the intersection heading east. It was a 1-2 on a 10 scale. Once I was past LA Fitness, the smell ceased. I drove behind 350 N Wolfe and Mizken and determined Prestige was not operating at that time. When at Mizken, I noticed there was not as many cars at Prestige (i.e. workers) and it appeared that the employees inside were wiping some equipment down and moving some items via forklift. I conclude my observations at about 550am and went back to the Village Hall. I smelled Prestige product at the corner of Central and Emerson when heading back to the hall."				
03/20/2024 at 5:50 AM - WMS sent the following email, "Arrived in the area at 550am, drove the usual route in MP and DP, no smells or sounds. Prestige was not operating. There are a lot of vehicles in the parking lot at Prestige. Seems a bit more parked cars than a usual shift. No semis picking up product or staged. Went back to hall at about 615am. We picked up signs at the hall and coffee'd up, then I went out to a construction site and then drove the usual route again in MP and DP at 725am. Prestige was still not operating. Back to hall about 8am."				
03/21/2024 at 5:30 AM - WMS sent the following email, "Arrived in the area at 530am. Drove the usual route in MP and DP. Defiantly some skunks out this morning. I noticed that there are more dumpsters located in the back of Prestige. They have 4 dumpsters and a large roll off from Republic. I did not notice Prestige running at that time. I did not see their production line/conveyor running. I did hear a faint pounding of metal inside the building while I was in the parking lot of 350 N Wolf and Mizken."

04/02/2024 at 2:44 PM - WMS sent the following email, "I was not intending on visiting or performing Prestige observations today however at lunch I went for a run and started heading north in MP. I picked up a cheesy Prestige smell at Busse Park (1.12 miles away) which is indicated on the map below. It was a 4 on a 10 scale. I changed my route to run to Prestige and Des Plaines. I ran to Prestige and heard them operating while I was running on Feehanville. It seemed louder today for some reason. I arrived to the Mizken parking lot and found Prestige operating. It was 12:30pm. Super odd thing; there were two vehicles with one person in each vehicle that were parked near Prestige and when I ran past the two vehicles I stopped in the 350 N Wolf Road parking lot. I proceeded to start taking video of Prestige running and then Prestige immediately shut down. Fairly odd coincidence that when I ran by and starting photographing, they shut down the factory... I proceeded to run in Des Plaines then to Lowden in MP (960 feet away) where I immediately smelled cheese/kind of rancid smell. It was 4 on a 10 scale. Then I ran on

04/09/2024 at 5:35 AM - WMS sent the following email, "In the area at 535am, drove the usual route in MP and DP. I caught a smell of Prestige on Lowden in MP. It was a 1 on a 10 scale. Drove in DP and caught a strong smell of Prestige product deeper back in the Longford Glen subdivision this time. It was a 3 on a 10 scale. I drove to the intersection of Feehanville and Wolf in DP; the Prestige smell was a 3-4 on the 10 scale. At Mizken, the smell was a 1-2 in the parking lot and loading dock area. The Prestige smell was very pronounced in DP this morning, so I doubled back through DP and the smell was still strong. I attached a video of cheese being processed on the conveyor belt at Prestige. I observed that conveyor belt from Mizken's parking lot. Wind is blowing 8-10 mph east/northeast today. I anticipate more complaints coming into today."

04/12/2024 at 1:12 PM - Chief Eterno sent the following email, "Last night (Thursday 4/11/24) at 8:32 PM, we received a complaint about a foul odor and loud noise emanating from Prestige Feed. The complainant was Ivaylo Draganov, who resides at 222 N. Yates Ln in Mount Prospect. Officer Frey drove out and met Mr. Draganov at his residence. Upon his arrival, Officer Frey detected a strong foul odor in the air and also heard a faint noise of what appeared to be a fan, coming from the direction of Prestige Feed. While speaking with Mr. Draganov, another neighbor, Robert Cullen, who lives at 1513 E. Jefferey Dr came out to speak with the officer. Mr. Cullen also complained about the foul odor and noise. He went on to say the odor was so bad that his children could not play outside because of the odor. Officer Frey documented this incident in the attached police report (MPP24-007278). If you have any questions, please let me know.

04/30/2024 at 5:15 AM - WMS sent the following email, "I arrived in the area at 515am, I performed some light and truck code enforcement then I drove my usual route in MP and DP. I smelled a faint (1 on a 10 level) odor of Prestige product in the parking lot of 350 N Wolf. There appeared to be less vehicles (only 3 vehicles) parked at 431 Lakeview Court when I drove in the Mizken parking lot. I decided to drive around the building at 431 Lakeview Court and found the dumpster soaked in Prestige product and what appeared to be liquid by-products. Very rancid and nasty smelling as I drove by the dumpster. As I looked over to the side of the Prestige parking lot I noticed a rat running in the wooded area. It appears that the Prestige product disposal process is attracting rats to the area. I concluded the inspection after performing additional observations on lighting in MP and returned to the hall about 555am."

05/01/2024 at 5:15 AM - WMS sent the following email, "I arrived in the area about 525am; drove my usual route in MP and DP. I stopped at 350 N Wolf; Prestige was not operating at the time. I drove to Mizken and parked behind some trees in the Mizken lot. I saw a few semis start to appear at the 431 Lakeview building. I stopped my vehicle in the Mizken lot and observed Prestige for awhile. After a few minutes, the machinery/cyclone started up and the start up sounded like a jet engine starting up. The whine was captured in this video I attached. The smell was very bad in the Mizken lot. Probably the worst I ever smelled outside, easily a 6-7 on a 10 scale. Like a combination of rancid cheese/food, gym locker clothes and old shoes. If Mizken's HVAC was operating at that time and they were bringing in fresh air, wow, I can only imagine that smell being brought inside the Mizken facility. Bad smell. I stayed for awhile longer and left Mizken parking lot about 6am. Then purchased Joe Donuts for staff and arrived at Village Hall about 615am.

05/18/2024 at 8:50 AM - WMS sent the following email, "I arrived in the area about 850am. I drove my usual route in MP and DP. At Dursey Lane in DP and Feehanville in MP intersection, I smelled Prestige product at 2-3 out of 10. The Prestige smell was more towards the rancid/sour/locker room smell. I drove to Montessori and Mizken parking lots; the smell was very bad this morning. I would say a 5 out of 10 with the Prestige smell being rancid and heavy. The amount of smoke that is coming out of the exhaust discharge seems darker the before. I attached a video. I arrived at the Village Hall about 920am."				
05/20/2024 at 5:25 AM - WMS sent the following email, "Arrived in the area about 525am, drove MP and DP. Prestige employees were onsite however the machinery was not running. I did drive on Lakeview Court cul-de-sac area and there was a Prestige cheese smell (about a 1-2 on a 10 scale). The smell trailed down Feehanville Court west and then died out. I doubled back to Lakeview Court and stayed behind the 431 Lakeview Court building to talk with a Nicholas employee and Prestige did not start up again while I was there."

05/22/2024 at 7:55 PM - Chief Eterno sent the following email, "On Wednesday, May 22, 2024 at approximately 7:55 PM, the PD received 3 complaints within minutes of one another regarding the odor from Prestige Feed. The 3 complainants who called 911 are: -Sami Arida who lives at 641 Longford Dr in Des Plaines -Erin Terese who lives at 651 Middleton Ln in Des Plaines -Dramin Patel who lives at 650 Middleton Ln in Des Plaines All 3 complainants called about the foul smell in the air. Officer Rob Nava drove over to the area around Prestige Feed, however he could not detect any foul odor. He then drove to the home addresses of all 3 complainants. While driving through the residential area in Des Plaines, where the complainants live, Officer Nava was able to detect the faint odor of burnt cheese in the air. Officer Nava documented this incident in police report # 24-010470. A copy of his report is attached for your review."

05/23/2024 at 5:20 AM - WMS sent the following email, "I arrived in the area at 520am. I drove MP and DP. I noticed a faint Prestige product smell on Central just east of Rand. I drove into Des Plaines and noted Prestige product smell in the area of Longford Glen. I would say a 1-2 on a 10 scale. Prestige had a semi truck at the loading dock and I could see (a lot) of product containers inside the facility. I drove through the business center and performed some additional code enforcement. I arrived at the hall about 550am."

06/04/2024 at 5:56 AM - WMS sent the following email, "I arrived in the area at 515am. Drove the usual route in MP and DP. Cicadas were noisy this morning by Lowden and in Des Plaines. When I drove from Des Plaines over to MP on Feehanville, my nose was hit with a Prestige product smell right away. I would say a 3 (out of 10 scale). Then when I drove by Montessori School it was bad. Easily a 4 on a 10 scale; it was a lingering stink and really rough smelling by their playground. Then I drove through to Mizken's testing lab and it is bad there too. 4 out of 10 scale. Interestingly, Prestige (its equipment) was not operating when I made my observations. However, with that smell, it must have operated through the night/early morning. I think with the humidity today, we are going to hear a lot of Prestige complaints."

06/05/2024 at 5:20 AM - WMS sent the following email, "Arrived in the area about 520am. Drove my usual route in MP and DP while also performing code enforcement on some lighting unrelated to this case. As I was driving across Wolf Road from DP to MP, a caught a slight wiff (not even a 1 out of 10) of Prestige product. I continued to Montessori and Mizken parking lots. I smelled Prestige product in the school parking lot (2 out of 10). In the Mizken lot it was a 3 out of 10. Prestige machinery was not running however they must have been running recently. It was also raining this morning so I believe that helped reduce Prestige particulates/smell in the area."				
06/05/2024 at 12:30 PM	Robert McElhattan	(847) 271-6890	rdm20fan@yahoo.com	1504 Lowden MP
the area about 540am, I drove usual route and did not smell any Prestige product. I went back to the Village Hall. Around 715am, I received a call on my cell phone from a number I did not recognize. I answered and it was Mary Beth Stillmaker. Mary Beth proceeded to file a complaint about Prestige saying it was nasty and it smells horrible. I asked for her address again and said I would stop out.				
The wind is blowing directly eastward at about 9mph. Straight into Des Plaines and Longford Glen subdivision I drove my usual route in MP and DP. In DP I smelled Prestige product right away (a 3 on a 10 scale). On Mary Beth's street on Middleton the smell was strong at a 4/5 out of 10. It was very cheesy. I double backed and smelled the area in DP and it was strong in the entire Longford subdivision.				
As I was heading out of the subdivision, Mary Beth flagged me down at the end of her driveway. She proceeded to yell/speak in a loud voice to me berating Prestige, the Village, and our attorneys so forth...				
At the same time, a MP Police squad arrived in the subdivision. It is my understanding from the officer there were two calls. One from Mary Beth and one from anonymous caller in DP on Dursey. Mary Beth walked up to the squad and my car as the officer and I were speaking. Mary Beth provided more of her narration...the

MP about 535am and performed some code enforcement on lights. Arrived at hall about 545-550am, dropped off some items and headed out to drive the usual Prestige route. I started driving usual route and noticed Republic emptying dumpsters at Prestige dumpsters. I detoured and drove over to the reuse truck behind Prestige. I stopped and had a short discussion with the route driver. I was treated with both the special smell of the dumpsters being emptied and the Prestige facility running. Wow. I asked the driver about the smell, cheese overload on dumpsters, and cheese sauce drippings. The route driver said those conditions improved since they spoke to Prestige. There was an employee of Prestige at the rear loading dock giving me a look. The discussion with the Republic driver was great and we concluded our talk. I left the Prestige property. I started driving my route again into Des Plaines and stopped in front Mary Beth's house in Des Plaines. I attached a message from yesterday that Mary Beth left. That is one of 6 calls this week so far...additionally people call my cell during the day and evening hours. I walked the block in front of Mary Beth's house. I attached a video with sound taken in Des Plaines. The other video was taken from next door to Prestige at 350 N Wolf. I additionally said good morning to a couple of residents

06/14/2024 at 8:08 AM - WMS sent the following email, "Was in MP earlier but delayed observations to get some variety. Around 710am today. Drove my usual route and smelled Prestige in Lowden neighborhood in MP immediately as I turned off of Central headed north. I would say a 3-4 on a 10 scale this morning. Wind blowing in a southerly direction (see below). I drove in Des Plaines and then back into Mount Prospect circling around to park in the Mizken parking lot to observe Prestige operating. There was someone walking around the 431 Lakeview building adjacent to the Mizken parking lot where I was parked. The person appeared to use his phone to take some pictures of me in my vehicle. No verbal exchange and I did not take any pictures today. The person kept on walking around to the front of the Prestige building. I did not recognize the person."

06/24/2024 at 6:56 AM - WMS sent the following email, "Arrived in the area about 535am today. Drove my usual route in MP and DP. As I drove behind 350 N Wolf Road, Prestige was not operating. As I crisscrossed into Des Plaines and back into MP through the business park, I heard the Prestige system start. I turned into the Montessori parking lot, I started to smell Prestige product (maybe a 1 on 10 scale). I drove behind Mizken and there was a really bad smell from Prestige (4-5 on a 10 scale). I know the system just started up, but wow it was nasty smelling. I parked behind Mizken for a little bit more and the smell did not change. Then I went back to the Village Hall.				
Over the weekend, there was a total of 6 complaints (some repeats) that emailed. In addition, over the weekend, there was 4 calls on my cell phone in which I did not answer, and no voicemail was left. One on Friday night and the rest over the weekend. No messages."

"We received 4 complaints over the weekend about Prestige:				
-Complaint # 1 was received on Saturday (6/22) at 9:10 PM. The complainant was Edmund Kulaga, who lives at 660 Dursey Ln in Des Plaines. Mr. Kaluga called to complain about the smell and noise coming from Prestige. Officer Giera drove over to Mr. Kaluga's house, however was unable to hear or smell anything unusual. This may in part be due to the heavy rainfall which was occurring. MPPD report # 24-012842 filed.				
-Complaint # 2 was received on Saturday (6/22) at 10:04 PM. The complainant was Eugen Chetrosanu, who lives at 1512 E. Mitchell Ln in MP. Mr. Chetrosanu called about an odor complaint. While at the complainant's house, Officer Roe was able to slightly detect the odor Mr. Chetrosanu mentioned. MPPD report # 24-012850 filed.				
-Complaint # 3 was received on Saturday (6/22) at 10:04 PM. The complainant was Robert Cullen who lives at 1513 E. Jeffrey Dr in MP. Mr. Cullen's house backs up directly to Mr. Chetrosanu's house (complainant #2). MPPD report # 24-012851 filed.				
-Complaint # 4 was received on Sunday (6/23) at 7:00 PM. The complainant was Jackie Wilk, who lives at 630 Castlereale Ln in Des Plaines. Ms. Wilk called to complain about the "horrible" smell coming from Prestige. Ms. Wilk said the smell was so bad it

06/26/2024 at 6:09 PM - Chief Eterno sent the following email, "Mike & Brandon - Between yesterday and this morning, we received 2 complaints about Prestige Feed: -The 1st complaint was last night (Tuesday 6/25) at 8:11PM. The complainant was Mary Beth Stillmaker who lives at 676 Middleton Ln in DP. Marybeth went outside last night and smelled the odor of burnt cheese. Officer Samantha Hansen drove over to Marybeth's address and was able to smell the odor of burnt cheese throughout the neighborhood. Police report # 24-013070 was filed. -The 2nd complaint was this morning (Wednesday 6/26) at 10:50 AM. The complainant was Jacqueline Wilk who lives at 630 Castlereas Ln in DP. Jacqueline called to say she has smelled the odor of burnt cheese in the air for the previous hour or two. Jacqueline also went on to say she has asthma and is concerned for her respiratory health. Officer Eric Kimbrough drove over to Jacqueline's house where he detected a strong odor of burnt cheese in the air. Police report # 24-01311 was filed. A copy of both police reports are attached for you review."

06/27/2024 at 3:18 PM - Chief Eterno sent the following email, "Early this morning (Thursday 6/27) at 3:14 AM, we were dispatched for an odor complaint at 122 N. Horner Ln in Mount Prospect. The complainant, Mark Johnson, related even with his windows closed he could smell the foul odor. Officer Louis Smith drove to Mark's house and confirmed the strong odor in the air. Officer Smith then drove over to Prestige Feed's location on Lakeview Court where he found the odor to be more pungent. It also appeared as though the business was operational. This complaint was filed under report # 24-013170. A copy of the police report is attached."				
06/27/2024 at 6:16 PM - Chief Eterno sent the following email, "This afternoon, we received a complaint about the odor from Prestige. The complainant, Robert Johnson, lives at 219 N. Stratton Ln in MP. Robert said the previous night (Wednesday 6/26) between 7:30 pm and 9:15 pm the smell emanating from Prestige was overwhelming. And again earlier today (Thursday 6/27) around noon and 1:30 pm, the smell become overwhelming when he tried to step outside or open his windows. The complaint was documented under police report # 24-013200. A copy of the report is attached."

07/08/2024 at 4:16 PM - WMS sent the following email, "Arrived in town just after 5am. Drove my usual route in MP and DP. It appeared that Prestige was not operating at the time of my observations. When I was in the Mizken parking lot, I observed Prestige staff through their windows operating a forklift inside. They were most likely preparing to operate. When driving through Des Plaines, I noted Mary Beth Stillmaker's windows at her home were open. I concluded the observations about 530am and drove some additional construction sites in the MP downtown.				
Additionally, Dustin Coy received 2 smell complaints about Prestige via phone; one was Mary Beth Stillmaker at 1116am and another unnamed caller at 1117am."

07/10/2024 at 5:12 AM - WMS sent the following email, "Arrived in the area at 420am, drove my usual route in MP and DP. It was raining fairly steady this morning. On Lowden in MP, I smelled Prestige Cheese in pockets at a 1-2 level. I doubled backed through the area and it (Prestige smell) was oddly in pockets with no patterns. I smelled it and disappeared quickly. In the parking lot of 350 N Wolf Road, I was hit with a significant smell of Prestige product at 3-4 out of 10 level; it was stinky. Interestingly, Prestige was not operating at that moment. I drove in DP and nothing there. I noticed a window open at Mary Beth's house. I drove over to Mizken and confirmed that Prestige was not operating. As I drove behind Mizken, I observed the Prestige workers what appeared to be sweeping and maintenance. They looked my way as it was pretty obvious that a vehicle was parked watching. There was only a handful of vehicles in Prestige lot so I can only surmise that they operated overnight or late into the night with the lingering smells. See wind direction below which is consistent with the Lowden locations as they are south of the facility."

07/10/2024 at 6:33 PM - Chief Eterno sent the following email, "We received one complaint about Prestige this afternoon (Wednesday 7/10/24) at 12:40 PM. The complainant, Christopher Zimmerman, lives at 207 N. Deneen Lane in MP. Christopher said he and his daughter arrived home at 11 AM this afternoon. When they exited the car, they smelled a strong odor from Prestige. Officer Steve Sparr drove over to Christopher's house to meet with him. When he arrived, Christopher admitted that the smell had since dissipated. Officer Sparr did not detect any odor while at Christopher's house, however did smell an odor as he was driving away from Christopher's house. Officer Sparr described the odor as almost farm compost or a strong corn like odor. Christopher's complaint was documented in police report # 24-014343, which is attached to this email."				
07/11/2024 at 11:21 AM	Scott Myslinski		smyslin@hotmail.com	1400 block of
07/12/2024 at 5:35 AM - WMS sent the following email, "I arrived in the area at 535am. I drove my usual route in MP and DP. I observed Mary Beth's windows open in front of her home. I verified that Prestige was operating this morning. I caught a super faint smell of Prestige along Lowden. Didn't even register a 1 out of 10. No other smells noted. Drove by the school and Mizken; I found no smells. I concluded the smell portion of my observations this morning and went back to Lowden and started the sound test. Sound test results under a separate email following this one."				

07/12/2024 at 7:08 AM - WMS sent the following email, "After my scent observations this morning, I performed a separate set of observations (approximately 555am) this morning regarding the sound Prestige's equipment/cyclone is making. Please see Brandon's previous email about the sound levels (I attached below). I noted my measurements (in red) right next Brandon's previous measurements. I noted no lawncare equipment and some traffic activity which was normal IMO. Additionally, I measured sound levels in front of Mary Beth's house and directly adjacent to Prestige on Mizken's property which is a straight shot to the cyclone equipment. In front of Mary Beth's house 48.3 decibels"

07/17/2024 at 8:25 AM - WMS sent the following email, "I arrived in the area at 545am. I delayed observations until later in the morning at 0730am because some complaints have been rolling in later in the morning. I drove my usual route in MP and DP. Wind is blowing towards the southeast. As I was driving in MP on Lowden east towards Wolf, my nose was smacked with a REALLY strong Prestige odor. It was particularly cheesy smelling, like a 6 out of 10. Very strong cheese smell along with a side of rancid smell. I drove into Des Plaines and the smell went from a 6 to 1-2 out of 10. I drove the business park and did not smell it there. I doubled back through MP in the really strong-smelling area to see if it was just a one and done before; however the smell was the same strength and putrid smelling."

07/23/2024 at 6:18 AM - WMS sent the following email, "Arrived in the area before 530am. Drove my usual route in MP and DP. As I was driving down Lowden, I smelled some Prestige funky smell. I confirmed at 350 N Wolf that Prestige was operating. Went over to Des Plaines again and confirmed the same Prestige smell (about a 1-2 on a 10 scale). It was not a really cheesy smelling this morning, it was more acrid bitter and odd smelling. I doubled back through into the business park and went back through Des Plaines area. Smell didn't change. Wind is going to blow the smell straight into Des Plaines if it keeps the same pattern. I noticed Mary Beth Stillmaker's windows open in the front of her house."

07/23/2024 at 2:13 PM - WMS sent the following email, "This morning we received additional complaints from MP and DP residents. At lunch I ran to Des Plaines in the Longford Glen Subdivision and into the business park. The route is very similar to the route I drive. By 350 N Wolf the Prestige smell was really rough, 4-5 on a 10 scale, not cheesy, rancid like. Smell hung in the air. I ran into Des Plaines and around Longford Glen Subdivision and Prestige smell was as far away as 1793 feet away. I smelled Prestige smell in the same pattern as the wind. As I neared Dursey and Feehanville, it was one of the worst smells I noted in recent observations. 5-6 on a 10 scale and really rancid with very little cheese smell. I went to the Park View Montessori where I smelled it by their playground, a 2-3 scale and then ran by both the high rise Mizken and their testing lab and both areas stunk really bad, like 5-6 scale."

07/25/2024 at 5:15 AM - WMS sent the following email, "Arrived in the area about 515am. Drove my usual route in MP and DP. Wind was pretty low and stagnant. As soon as I entered the Lowden neighborhood and south, I smelled Prestige immediately. It was 3-4 out of 10 scale this morning. Pretty stale and nasty smelling. I turned onto Wolf Road and was smacked in the face with Prestige smell; easily a 5-6 out of 10, just really rough smelling. I drove behind 350 N Wolf and it was equally nasty smelling as the smell just hung in the air; 5-6 out of 10. Drove into Des Plaines and smelled the Prestige a 1 out of 10 scale. Light smell. I doubled backed through the business park and went through all the same areas again. Smell was still the same. I attached a video of them producing feed/cheese; I was able to capture the cheese rolling up into the ovens while I was parked in Mizken."

07/29/2024 at 6:08 AM - WMS sent the following email: "Arrived in the area at 520am. Drove my usual route; wind is blowing to the north/northeast this morning. Drove through MP and DP, noted no smells south and east of Prestige. As soon as I crossed over to MP again from Des Plaines, I noted Prestige smell right away. I would say a 2 out of 10 along Feehanville which is north of Prestige. Then I drove to Mizken and it was really hanging heavy by Mizken and their loading dock area. I would say 3-4 out of 10 by Mizken. I noted less vehicles at Prestige; only 3 vehicles and I usually see 6-8 vehicles."

07/29/2024 at 11:54 AM - WMS sent the following email: "I called up Mike at Mizken to ask if I can tour his testing facility right away since he smells Prestige inside. Mike Sobotta agreed for me to tour. I went to the testing facility building and drove around the building. I smelled Prestige product at a solid 4+ level on the exterior and it was pretty rough smelling. More acrid. I contacted Mike Sobotta and toured the inside. I did smell Prestige product inside of their testing lab. It was a 1+ out of 10. Mike Sobotta mentioned to me that they have to put their filter replacement on their roof top units on an expedited replacement schedule due to Prestige smell. IMO once a filter has an acrid smell like Prestige, you have to change that filter to get that smell out of the make air. At some point when the facility opened, they had 100% dilution air from the outside per Mike. They reduced to 50% dilution air to see if it help reduce the Prestige smell and then reduced Mizken reduced again down to 10%. Even with the 10% dilution air, Mizken still smells it in their facility and so did I. Any lower dilution air and it would be a problem for their air quality."

08/07/2024 at 5:54 AM - WMS sent the following email, "I arrived in the area at about 450am. Drove usual MP and Des Plaines areas. Prestige was not operating at the time; no smell. Mary Beth's windows were open on the front of her house. I did not notice any residual smell in the area so they must not have operated overnight. I parked in an adjacent parking lot (Mizken) and watched the Prestige facility. I notified Grace at Trinity that I was onsite. I continued my observations and at 521am the first cyclone started up. Then at 523am, the second cyclone started up. I then notified Trinity that they started up and to plan on performing observations. Definitely a different time than 6am as the Prestige owner stated. About a minute later as I was pulling away from my parking spot, I did notice a smell of Prestige product in the parking lot of Mizken. I did not notice that before the cyclones started up. The equipment/cyclones starting up must have sent out a puff of cheese smell. It was stale/spoil smelling at a 1-2 out of 10. Trinity will be on route this morning to perform observations."

08/14/2024 at 3:36 PM - WMS sent the following email, "I have been trying to get this email out all day. Sorry it took a while. I arrived in the area at 715am. I notified Trinity last night that I was arriving later onsite this morning. Prestige was operating. I drove the usual areas in MP and DP. I found the wind current/direction very unusual; out of the southeast, see below. I noticed the smell at Park View Montessori, and it was 3 out of 10 scale. Trinity was notified and I also noted the unusual wind pattern to Trinity."				
08/15/2024 at 5:47 AM - WMS sent the following email, "Arrived in the area at 455am. Drove the usual route in MP and DP. Wind direction is odd again (see below) and also it is raining now. I went to park at the loading dock at Mizken to watch the startup. I noticed Prestige smell right away at Mizken so they must have operated overnight. It was 3 out of 10 in the loading dock area of Mizken. At about 515am, Prestige started up again. Once they started up again, the machines seemed to have a big puff of Prestige product smell come out and it just floated over to Mizken and me in my vehicle. Pretty rough smelling. It went from a 3 to a 4-5 while I sat in my vehicle after the startup of the Prestige machinery. Also, the smell was a cross between cheese, locker room, and wet dog this morning so it was really unpleasant cheese smell hanging at Mizken. Trinity notified and will be sampling."				

08/15/2024 at 6:20 AM	Mike Sobotta	(815) 621-3693	michael.Sobotta@mizkan.com	1601 Feehanville Dr. # 200 MP
08/15/2024 at 6:30 AM 08/15/2024 at 9:17 AM - WMS sent the following email, "We had to shift some gears this morning. It was raining so Trinity couldn't take sampling outside this morning. We were going to cancel but the Village received a complaint from Mike Sobotta from Mizken, I decided to visit Mizken and it was really bad inside the lab in Mizken. 4 out of 10 scale INSIDE the building. Outside was a 5-6 scale. Really rough smelling outside. Mike Sobotta granted permission to sample within his facility. I consulted with Grace at Trinity to see if they could sample inside the facility, and I decided to move forward with the test in lab interior space with Trinity. Trinity performed the sampling. I believe it was a significant smell on the scale especially on the inside of a building laboratory however you will have to consult with the final field report. No Mizken testing was being performed at the time of the Trinity sampling. We visited Park View Montessori while we were doing inside spaces and we noted no Prestige smell inside the school."	Robert McElhattan	(847) 271-6890	rdm20fan@yahoo.com	1504 Lowden Lane MP
08/16/2024 at 8:07 AM - WMS sent the following email, "I waited a bit to perform observations this morning. Prestige was operating this morning. Drove through MP and DP. Wind is blowing into Des Plaines and northeast Mount Prospect. I noted Prestige smell on Wolf Road at about a 3 out of 10 this morning. At 350 N Wolf Road at about a 3 and then Des Plaines Longford Glen at 3 level. It seemed to settle in the Longford Glen subdivision and kind of hang there. I drove into the Walgreens parking lot (corner of Kensington and Wolf) and noted Prestige smell at about a 1-2 level."

08/19/2024 at 6:37 AM - WMS sent the following email, "I saw this email from this morning. We usually do not receive complaints from residents this early so I stopped in the area. I arrived in the area at about 520am. Drove the usual route in MP and DP. I noticed Prestige smell right away in the Lowden neighborhood. I would say 3-4 out of 10 scale. The smell got progressively worse to a 4-5 at Wolf Road and Lowden. Wind is blowing towards the south/southeast. I drove the complainants block in Longford Glen and then in Kylemore. Noise was not any different than before. I smelled Prestige in Kylemore at a 2-3 and by the entrance to Longford Glen at a 1-2 out of 10 scale."

08/20/2024 at 7:02 AM - WMS sent the following email, "Arrived in the area at 540am. Drove my usual areas in MP and DP; Prestige was operating this morning. There was a significant smell on Wolf Road by the Lowden and Kylemore neighborhoods. I would say 3-4 on a 10 scale. I drove through Kylemore and it was very strong in the subdivision; a 4-5 out of 10. When I was at 350 N Wolf Road the smell was very bad this morning; reaching a 5-6 out of 10. It smelled really bad, more rancid and spoiled smelling this morning and heavier smelling. Additionally, Prestige operated last night as I received complaints from residents in the 7-9pm range."

08/21/2024 at 9:34 AM - WMS sent the following email, "I arrived in the area at 550am. I drove usual MP and DP locations. Similar to yesterday on locations, Prestige was operating. In the Lowden neighborhood, it was 1-2 out of 10. In Kylemore neighborhood and intersection of Wolf, it was 3. I drove Longford Glen and noted a 1-2 deeper in the subdivision and closer to Kylemore subdivision on the south. Drove the business park, Mizken, and Montessori observing Prestige operating. At 350 N Wolf it was a 2-3 out of 10 in addition there were 2 semi-trailers backed up to loading docks for shipping/receiving. An additional one semi-trailer was parked and waiting because they was no access."				
08/21/2024 at 9:34 AM - WMS sent the following email, "After receiving additional neighbor complaints this morning, I drove the MP and DP area again. The smell has increased since this morning. The traffic and construction were a little funky now so I changed up my route but went to the same areas. At the Lowden neighborhood it was 2-3 closer to Wolf, the smell did travel further down Wolf Road hitting Central and that auto shop which is a 3. Outside of 350 N Wolf on Wolf it was a 4, with a really strong, heavy stale cheese smell hanging in the area. Longford Glen had the smell at their entrance now at a 3 level. Smell was hanging at about a 2 outside of Mizken loading dock area. The 2 trucks were gone out of the Prestige loading dock and the one that was waiting for a loading dock position I observed earlier is now in place. A lot of truck traffic this morning..."

Exhibit 6

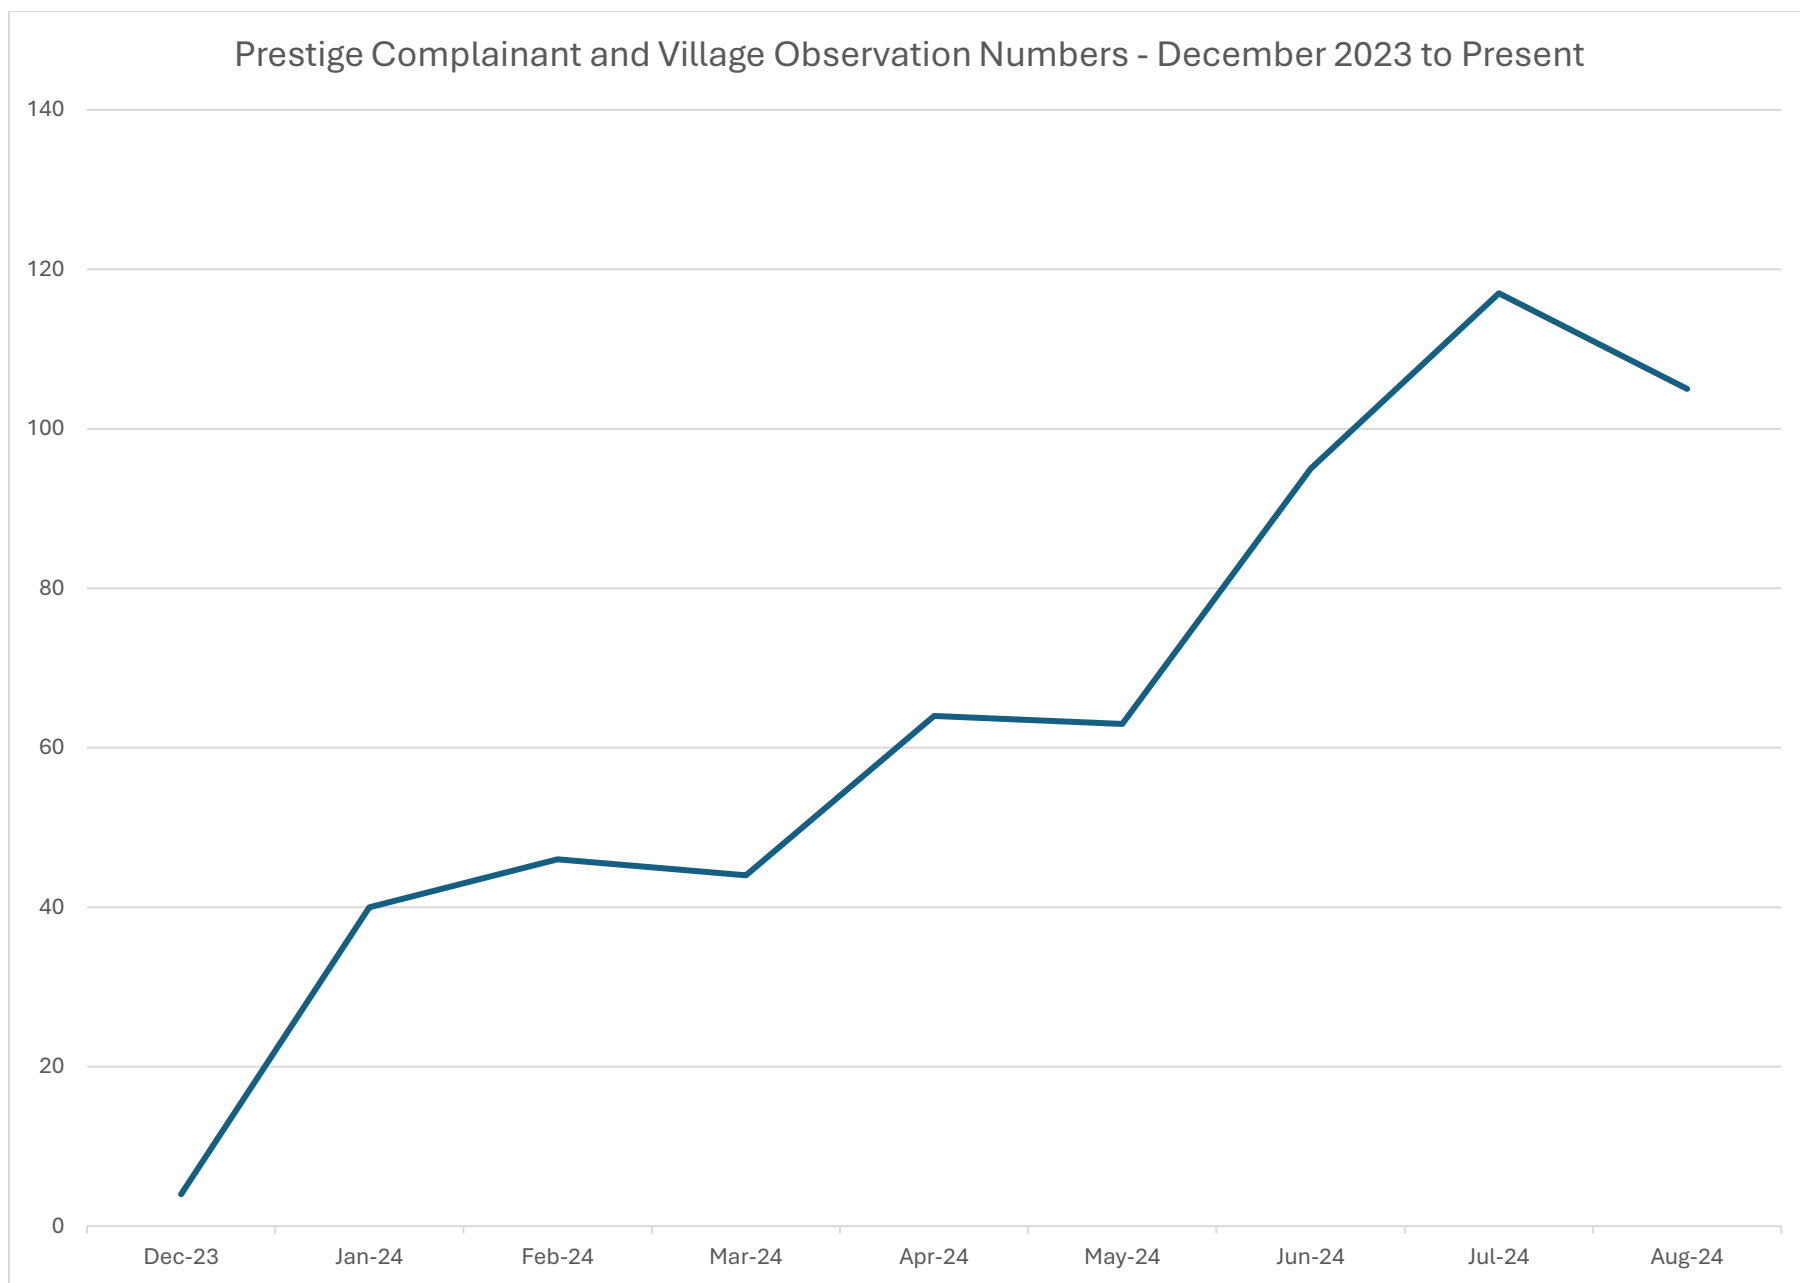

Exhibit C

**IN THE CIRCUIT COURT OF COOK COUNTY
COUNTY DEPARTMENT, CHANCERY DIVISION**

PRESTIGE FEED PRODUCTS, LLC

Plaintiff/Counterclaim Defendant,

v.

VILLAGE OF MOUNT PROSPECT,

Defendant/Counterclaim Plaintiff.

Case No. 2023 CH 5147
(transferred to Law Div'n)

Hon. Thomas More Donnelly

Cal. W

Second Declaration of Angie Wanger

Under penalties as provided by law pursuant to Section 1-109 of the Code of Civil Procedure, the undersigned certifies that the statements set forth in this instrument are true:

1. I am over the age of 18 years and, if called to testify in this matter, could testify competently to the below facts from personal knowledge.

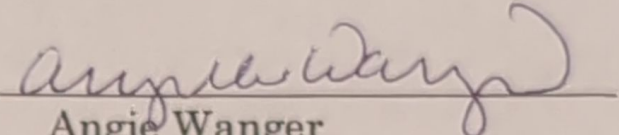

2. This is the second declaration I have submitted related to the above matter, this declaration is meant to supplement my prior declaration, and this declaration is being submitted in relation to the Village of Mount Prospect's Response to Prestige's Combined Motion for Judgment on the Pleadings and Partial Motion for Summary Judgment ("**Motion**").

3. The standard of measurement units that Trinity Consultants used to collect its odor measurements at Prestige Feed Products, LLC's Village of Mount Prospect facility is the same standard referenced in, as defined by the Motion, Prestige's Supposed Scentometer Standard.

4. The Nasal Ranger and Scentometer are both odor measurement devices known as field olfactometers.

5. Both the Nasal Ranger and Scentometer function under the same principles and a study comparing the two declared that there was no significant difference between the accuracy of the two devices.

DATED: November 27, 2024

Angie Wanger
